BSCS Biology ,1997 Theism in the Light of Present Science and Philosophy James Iverach,1899 **Trinity and Organism** James Eglinton,2012-03-29 This book explores the organic motif found throughout the writings of the Dutch Calvinist theologian Herman Bavinck 1854 1921 Noting that Bavinck uses this motif at key points in the most important loci of theology Christology general and special revelation ecclesiology and so forth it seems that one cannot read him carefully without particular attention to his motif of choice the organic By examining the sense in which Bavinck views all of reality as a beautiful balance of unity in diversity James Eglinton draws the reader to Bavinck s constant concern for the doctrine of God as Trinity If God is the Father the Son and the Holy Spirit Bavinck argues the creation must be more akin to an organism than a machine Trinity and organism are thus closely linked concepts Eglinton critiques and rejects the two Bavincks one orthodox and the other modern hermeneutic so commonplace in discussions of Bavinck s theology Instead this book argues for a reunited Herman Bavinck as a figure committed to the participation of historic orthodox theology in the modern world

Yates,2011-07-08 Who are we Why are we here What is the true meaning for our existence Each of these questions provides a general intention to answer in this book Questions about the purpose of life for human beings are not new as book topics for nonfiction category book titles Nevertheless author Donald L Yates interest in approaching this and similar parallel questions is in investigating the links ties connections and other illustrations of harmony and balance between spiritual principles in their broadest sense and sound science With such a discovery of connectedness and agreement between science and universal spiritual principles there are thus the wider implications for humankinds purpose in living and for other larger questions of humankinds behavior actions and existence Moreover this book is poised to add a particular significant contribution to the ongoing debate between creationism and evolutionary theory in public education And while the central theme most recently fostering the debate has been what constitutes good science what is alleged as being the universal consensus within the scientific community of evolution theory unqualified merit is far from being an empirically verifiable credence It is this authors view that such an announced state of universal support for what has been described as scientific consensus on evolution theory has no basis in fact For those who retain the literalist interpretations and beliefs of the origins of the universe as found in Genesis from the Bible one should find solace in the considerable evidence that this book brings to the factual basis for creationism as the framework and foundation for the origins of the world and universe Life, Organisms, and Human Nature Luca Corti,Johannes-Georg Schüle,2023-11-09 This collection of essays investigates the notions of life living organisms and human nature in Classical German Philosophy from a historical and conceptual perspective Its 19 chapters move from the peculiarities of organic life to the peculiarities of the distinctly human life form and discuss the strengths and weaknesses of naturalistic accounts of life In light of the growing interest in nature within current philosophical debates the book provides an overview of what the philosophical epoch of Kant Fichte Schelling Humboldt the Romantics Hegel and others can contribute to our understanding of life today The collection of essays represents a plurality of approaches that reflects the pluralism of the tradition itself highlighting the liveliness and polyphonic nature of the issues at stake and the ways in which they were approached in post Kantian thought In combining historical and philosophical investigation the collection constitutes a unique resource for scholars and graduate students working in various areas related to the study of nature in philosophy contemporary theories of science and the humanities more generally *Books in Print* ,1991

The Crucible of Religion Wojciech Maria Zalewski, 2012-02-13 Religion is commonly viewed through the lens of the world's religious traditions stressing the differences and often the conflicts among them The author of this book instead presents religion as a common and universal human phenomenon based deeply in a human nature shared by all In this view the underlining and unifying principle of religion is a particular affirmative attitude toward life which he presents as the Ultimate Value and as such the key cultural constituent and defining factor of all religion This Ultimate Value finds its expressions in various civilizations and results in a variety of forms these are what we know as the world's religious traditions By analyzing the roles of both culture and civilization in their attitudes toward life the author places religion beyond religious traditions and shows how the latter regardless of whether they are theistic or atheistic draw their principles from the former mainly by promoting the Golden Rule in its applications THE UNIVERSE A VAST ELECTRIC ORGANISM GEORGE WOODWARD WARDER, 1903
