Everyday Matters in Science and Mathematics Ricardo Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re-examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with

complex classroom events rather than formal theories of learning. Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events. This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning-making experiences. Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field: thinking about learning. Further, it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed.

Everyday Matters in Science and Mathematics Studies of Complex Classroom Events is an important resource for researchers, teacher educators, and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design.

Numeracy in Authentic Contexts Maura Sellars, 2017-10-25. This book is based on the notion that there are many ways in which mathematics learning can be achieved for students and that not all of them are focused on the mathematics classroom. It explores the foundational numeracy principles of the non-mathematical subject areas and aligns these to the Australian numeracy learning continuum. It demonstrates in detail the extent to which numeracy competencies underpin successful learning in all the subject areas of the curricula. It validates a focus of developing numeracy competencies through learning in the arts, science, and other discipline areas with which school students to engage with in order to develop holistically but which are not subjected to national assessment practices. It is developed around the notion of praxis: putting theory into practice in order to respond to the urgent need for students to be supported in their efforts to increase their numeracy capabilities in a world where extensive amounts of new information are often presented in graphical or data-based formats. Additionally, it offers perspectives on developing all students' capacities to become numerate in school contexts and presents inclusive differentiated lesson examples as an alternative way of exploring numeracy in the context of teaching and learning in real-world classroom contexts.

Resources for Teaching Mathematics: 14-16 Colin Foster, 2010-08-05. This book contains 70 ready-to-use mathematics lessons suitable for students aged 14-16. Some lessons offer alternative routes through the curriculum such as practising indices by solving radical equations, while others concentrate on difficult ideas like appreciating that not all mathematical relationships are linear. Each plan consists of a teacher's sheet providing the aims and objectives of the lesson, a lesson starter, main phase, plenary, and homework ideas, each with suggested timeframes, guidance on how to adapt the activities to cater for students working at different levels, and online resources including links to useful websites, material to display on the whiteboard, and additional ideas. Each plan also includes a photocopiable or downloadable student task sheet that corresponds to the teacher's sheet. The lessons focus on problem-solving and putting mathematics into context and are an essential resource for any busy teacher of mathematics.
