The Liberation of Life Charles Birch, John B. Cobb, 1985-01-10 This book is about the liberation of the concept of life from the bondage fashioned by the interpreters of life ever since biology began and about the liberation of the life of humans and non humans alike from the bondage of social structures and behaviour which now threatens the fullness of life's possibilities if not survival itself. It falls into a tradition of writings about human problems from a perspective informed by biology. It rejects the mechanistic model of life dominant in the Western world and develops an alternative ecological model which is applicable to the life of the cell and the life of the human community. For the first time it brings together in one work the insights of modern biology with those of a modern holistic philosophy and a liberal theology in a way which challenges conventional approaches to science agriculture sociology politics economics development and liberation movements.

Collected Works of George Grant Arthur Davis, Henry Roper Roper, Sheila Grant, 2009-02-28 George Grant 1918-88 has often been called Canada's greatest

political philosopher and his work continues to influence the country's political social and cultural discourse and institutions. The fourth and final volume of the *Collected Works of George Grant* contains his writings from the last period of his life and includes unpublished material such as lectures, interviews, and excerpts from his notebooks. With comprehensive annotations for his articles, reviews, and the three books he published during this period: *Time as History*, *English Speaking*, *Justice and Technology*, and *Justice*, the volume also contains his writings on Nietzsche, Heidegger, Simone Weil, and C. line that were central to this phase of his thought. Volume 4 reveals his engagement with technology and the nature of technological society that is as insightful today as during Grant's lifetime and is lasting proof of his legacy.

Arthur Davis is Associate Professor in the School of Social Sciences, Atkinson Faculty of Liberal and Professional Studies, York University. During the 1950s he studied undergraduate philosophy with George Grant.

More and Different Philip W. Anderson, 2011. Named a Top Five Book of 2012 by *Physics Today* USA. Philip Anderson was educated at Urbana High School in Urbana, Illinois, at Harvard (BS 1943, PhD 1949) and further educated at Bell Laboratories where his career (1949-1984) coincided with the greatest period of that remarkable institution. Starting in 1967 he shared his time with Cambridge University until 1975 and then with Princeton where he continued full time as Joseph Henry Professor until 1997. As an emeritus he remains active in research and at press time he was involved in several scientific controversies about high profile subjects in which his point of view, though unpopular at the moment, is likely to prevail eventually. His colleagues have made him one of the two physicists most often cited in the scientific literature for several decades. His work is characterized by mathematical simplicity combined with conceptual depth and by profound respect for experimental findings. He has explored areas outside his main discipline: the quantum theory of condensed matter for which he won the 1977 Nobel Prize; on several occasions his paper on what is now called the Anderson-Higgs mechanism was a main source for Peter Higgs' elucidation of the boson; a crucial insight led to work on the dynamics of neutron stars, pulsars, and his concept of the spin glass led far afield to developments in practical computer algorithms and neural nets, and eventually to his involvement in the early years of the Santa Fe Institute and his co-leadership with Kenneth Arrow of two influential workshops on economics at that institution. His writing career started with a much-quoted article in *Science* titled *More is Different* in 1971; he was an occasional columnist for *Physics Today* in the 1980s and 1990s. He was more recently a reviewer of science and science-related books for the *Times* (London), *Higher Education Supplement*, as well as an occasional contributor to *Science*, *Nature*, and other journals.

Our Knowledge of the External World Bertrand Russell, 1914. *Physics with Modern Physics for Scientists and Engineers* Richard Wolfson, Jay M. Pasachoff, 1999. [Governmentality Studies in Education](#), 2009-01-01. Michel Foucault's concept of governmentality originated in a lecture series in the late 1970s at the Collège de France and soon became the basis for a range of historical and contemporary studies across the social sciences and humanities. The concept in part rests on a simple but powerful idea that links government to the freedom of the subject in a novel understanding of liberal politics. It also provides an analytics of

power based on the examination of actual practices This is the first collection to use Foucault's concept in relation to the field of education where it has a natural home given that much educational theory and practice in the liberal tradition at least since Kant has been directed at the goals of autonomy and self government The volume has three sections a general section on Foucault and governmentality with contributions from some of the world's leading scholars in the area including Colin Gordon Jacques Donzelot and Thomas Lemke and two sections devoted to governmentality and education the first outlining Anglo American perspectives the second focusing on European perspectives with contributions from leading scholars such as Tom Popkewitz James Marshall Tom Osborne Michael Peters Mark Olssen Tina Besley Hermann J Forneck Bernadette Baker Susan Weber Susanne Maurer Linda Graham and Maarten Simons and Jan Masschelein among many others **The**
