Alex M. Davison

Management Of Renal Hypertension Cardiovascular Medicine Hypertension New Clinical Applications Nephrology:

Management of Renal Hypertension G.R. Catto, 2013-04-17 During the last few years renal hypertension has become a subject of increasing importance The development of improved radiological techniques notably intravenous and intra arterial digital subtraction angiography has made the diagnosis of renal artery stenosis more reliable while advances in vascular surgery and the introduction of percutaneous trans luminal angioplasty have caused major changes in clinical practice The increasing use of such potent antihypertensive agents as the angiotensin I converting enzyme inhibitors has emphasized the problem of renal artery stenosis in older patients with wide spread vascular disease as well as improving the prognosis of patients with accelerated hypertension This book examines the surgical and medical aspects of renal hypertension in the light of these recent advances Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician The developments of the last decade have emphasized that renal hypertension is no longer a matter only for the nephrologist but a subject on which all clinicians should be well informed

Haemodialysis G.R. Catto, 2012-12-06. For more than a generation, haemodialysis has been the principal method of treating patients with both acute and chronic renal failure. Initially, developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology. More recently, as advances in therapy have demonstrated the value of haemoperfusion for certain types of poisoning, the basic principles of haemodialysis have been perceived as important in many areas of clinical practice. In this volume, the potential advantages of bicarbonate haemodialysis are objectively assessed, the technical and clinical aspects of both haemofiltration and haemoperfusion discussed, and the continuing problems associated with such extracorporeal circuits analysed. All the chapters have been written by recognized experts in their field. The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians.

Kidney Disease and Nephrology Index, 1975

Chronic Renal Failure G.R. Catto, 2012-12-06. For the last two decades, the topic of chronic renal failure has been dominated by discussions on dialysis and transplantation. As facilities for treating patients with end-stage renal failure have become more readily available at least in Europe and North America, attention has once again been drawn to conservative measures which may improve both the overall prognosis and the quality of life of patients with renal impairment. Although severe renal failure may be progressive and many patients will ultimately require some form of renal replacement therapy, it is now widely appreciated that distressing symptoms can often be ameliorated by judicious medical treatment. Children as well as and perhaps to a greater extent than adults may benefit from such therapy. This volume examines relevant trends in the conservative management of both adults and children with chronic renal failure. Each chapter has been written by recognized experts and provides information of clinical relevance for the average clinician. As the overall prognosis for patients with end-stage renal failure improves, it is clear the management of patients with relatively stable chronic renal failure is an important topic not only for nephrologists but for all practising clinicians.

Calculus Disease G.R. Catto, 2012-12-06. Renal stone disease remains a common clinical problem. Patients may attend either medical or surgical clinics and not infrequently present as acute abdominal emergencies to general practitioners, physicians, surgeons, and even gynaecologists. Recent urinary calculi continue to cause considerable morbidity despite the recent advances in our understanding of the pathogenesis of the different types of stones involved and despite improvements in treatment by appropriate drug therapy, by ultrasound techniques, and by lithotripsy. This volume discusses the investigation and management of patients with calculus disease. Each chapter has been written by an experienced clinician and provides

information of considerable relevance and importance for all doctors engaged in clinical practice The technical developments of the last few years have clearly demonstrated that renal stone disease even when recurrent should be an uncommon cause of chronic renal failure Knowledge of the recent developments in this field is important for all practising doctors and even more important for their patients

Continuous Ambulatory Peritoneal Dialysis G.R. Catto, 2012-12-06 For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure Initially developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology More recently as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning the basic principles of haemodialysis have been perceived as important in many areas of clinical practice In this volume the potential advantages of bicarbonate haemodialysis are objectively assessed the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extra corporeal circuits analysed All the chapters have been written by recognized experts in their field The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians

Evidence-based Management of Hypertension Matthew R Weir, 2010-09-01 The treatment of hypertension is now evolving into a decision making process of ever greater complexity Not only has the range of drugs available increased but so too has our knowledge of the diversity of individual patients responsiveness to therapy and the need to tailor their treatment with reference to a wide variety of additional factors In order to provide effective patient care the clinician needs to be aware of all the options available but also of the evidence supporting their use and the extent to which that evidence justifies the choices made In this new volume leading authorities in their fields draw on the available evidence to provide answers to a series of key clinical questions facing the clinician treating hypertension Should we treat prehypertension How does the choice of therapy change in the presence of comorbidities such as obesity ischemic heart disease left ventricular hypertrophy diabetes or cerebrovascular disease Evidence based Management of Hypertension provides answers to these and many other questions as the authors present an expert analysis of the available evidence and offer authoritative recommendations for treatment planning In each chapter tables highlight evidence from a variety of sources and every chapter concludes with a series of key practice points that present a summary of evidence based recommendations for best practice graded according to the quality of that evidence For any clinician concerned with the care

of the hypertensive patient this volume will be a valuable aid to treatment planning and long term management *Urinary Tract Infection* G.R. Catto, 2012-12-06 Urinary tract infection remains one of the most common reasons for an individual seeking medical advice Although the associated morbidity varies widely in adults such infections are less common but may constitute severe life threatening illness in children and in the elderly Diagnostic tests and treatment have been rationalized in recent years but many practising doctors still have difficulty in appreciating the patho physiological principles involved Particular difficulty is often experienced when treating patients with recurrent urinary tract infections covert bacteriuria vesico ureteric reflux elderly patients and those with indwelling catheters These topics are fully discussed in this volume Each chapter has been written by a recognized expert and practical aspects of patient management have been emphasized The information presented in this volume should prove of interest not only to nephrologists but to all practising clinicians VII ABOUT THE EDITOR Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland the Renal Association and the Transplantation Society He has published widely on transplant and reproductive immunology calcium metabolism and general nephrology **Evidence-Based Medicine Guidelines** Duodecim Medical Publications, 2005-03-04 Evidence Based Medicine Guidelines fills the demand for a handbook discussing the diagnosis and treatment of a wide range of diseases and conditions encountered by health care professionals The title was first published in Finland by the Finnish Medical Society where it is now considered to be the single most important support tool for the physicians decision making in their daily work What sets EBM Guidelines apart from competing books Provides physicians with fast and easy access to practice guidelines based on the best available research evidence Covers practically all medical conditions encountered in general practice Developed by over 300 experienced general practitioners and specialists worldwide Includes both diagnostic and therapeutic guidelines and recommendations on diagnostic tests and drug dosage Presented in a user friendly format with self contained chapters based on clinical subjects Clear and concise explanations of all available evidence results in the guideline for treatment The strength of evidence is graded from A D making this title a quick and easy reference whenever and wherever you need it Assumes no prior knowledge of EBM or statistics all the work of searching and appraisal has been done for you Seeks to include guidelines where clinical evidence is incomplete or unavailable Contains full colour photographs and tables throughout Easy to read and fast support at the point of care EBM Guidelines Summarises the best available evidence Cochrane reviews DARE abstracts Clinical Evidence topics original articles in medical journals abstracts in the Health Technology Assessment Database NHS Economic Evaluation Evaluates and grades the strength of all individual evidence from A Strong research based evidence to D No scientific evidence Suggests guidelines based on clinical evidence If

clinical evidence is inadequate or missing an expert panel evaluate all other available information and suggests the appropriate guideline With over 1000 problem orientated or disease specific guidelines including reference to evidence summaries for all guidelines this title is the most extensive collection of guidelines for primary care today Here are just a few examples of the raving reviews for Evidence Based Medicine Guidelines An excellent resource quick to use even during consultations very helpful to check whether our preferred diagnostic and therapeutic methods are adequate competent suggestions based on real evidence Heinz Bhend PRIMARY CARE clinically useful answers easy to read this resource is worth using Carl Heneghan Centre for Evidence Based Medicine Oxford UK EVIDENCE BASED MEDICINE Journal *Multisystem Diseases* G.R. Catto,2012-12-06 During the last decade facilities for treating patients with end stage renal failure have expanded in all Westernized countries Partly as a consequence interest has been stimulated in many multisystem diseases which may progress to chronic renal failure Some of these diseases such as diabetes mellitus are common but still have controversial aspects to their investigation and management Others such as lupus nephritis are relatively rare but respond well to recent advances in therapy In addition to diabetes mellitus and lupus nephritis this volume has chapters on multiple myeloma and Henoch Schonlein purpura All the chapters have been written by acknowledged experts who have emphasized the practical aspects of patient management The information contained in this volume should thus prove of interest not only to nephrologists but to all practising clinicians VII ABOUT THE EDITOR Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland the Renal Association and the Transplantation Society He has published widely on transplant and reproductive immunology calcium metabolism and general nephrology

Ankylosing Spondylitis J. Calabro,G. Dick,2012-12-06 Ankylosing spondylitis the third most common form of chronic arthritis is a systemic rheumatic disorder characterized by inflammation of the axial skeleton spine and sacroiliac joints and a host of systemic manifestations With comprehensive care the vast majority of patients can lead full productive lives However management can succeed only with patient education and exercise Recent communication from my co editor Carson Dick serves to remind me that there are several unresolved issues concerning drug therapy in ankylosing spondylitis Clearly in spite of my views there are others who do not believe that the non steroidal anti inflammatory drugs NSAIDs alter favorably the course of disease and they must be administered for prolonged periods and in anti inflammatory quantities to be effective I would agree with Carson Dick that aspirin and phenylbutazone are way down the list of drug priorities following the marketing of other NSAIDs that are effective and safer I am grateful to my contributors to this volume all recognized authorities on their particular topic It has been a privilege collaborating with them on this particular volume
