Parallel And Distributed Programming Using C :

Parallel and Distributed Programming Using C++ Cameron Hughes, Tracey Hughes, 2004 This text takes complicated and almost unapproachable parallel programming techniques and presents them in a simple understandable manner It covers the fundamentals of programming for distributed environments like Internets and Intranets as well as the topic of Web Based Agents

Parallel And Distributed Programming Using C++, 1/e Cameron Hughes, 2004

Parallel Programming Using C++ Gregory V. Wilson, Paul Lu, 1996-07-08 Foreword by Bjarne Stroustrup Software is generally acknowledged to be the single greatest obstacle preventing mainstream adoption of massively parallel computing While sequential applications are routinely ported to platforms ranging from PCs to mainframes most parallel programs only ever run on one type of machine One reason for this is that most parallel programming systems have failed to insulate their users from the architectures of the machines on which they have run Those that have been platform independent have usually also had poor performance Many researchers now believe that object oriented languages may offer a solution By hiding the architecture specific constructs required for high performance inside platform independent abstractions parallel object oriented programming systems may be able to combine the speed of massively parallel computing with the comfort of sequential programming

Parallel Programming Using C describes fifteen parallel programming systems based on C the most popular object oriented language of today These systems cover the whole spectrum of parallel programming paradigms from data parallelism through dataflow and distributed shared memory to message passing control parallelism For the parallel programming community a common parallel application is discussed in each chapter as part of the description of the system itself By comparing the implementations of the polygon overlay problem in each system the reader can get a better sense of their expressiveness and functionality for a common problem For the systems community the chapters contain a discussion of the implementation of the various compilers and runtime systems In addition to discussing the performance of polygon overlay several of the contributors also discuss the performance of other more substantial applications For the research community the contributors discuss the motivations for and philosophy of their systems As well many of the chapters include critiques that complete the research arc by pointing out possible future research directions Finally for the object oriented community there are many examples of how encapsulation inheritance and polymorphism can be used to control the complexity of developing debugging and tuning parallel software

Parallel C++ Patrick Diehl, Steven R. Brandt, Hartmut Kaiser, 2024-07-02 This textbook focuses on practical parallel C programming at the graduate student level In particular it shows the APIs and related language features in the C 17 and C 20 standards covering both single node and distributed systems It shows that with the parallel features in the C 17 and C 20 standards learning meta languages like OpenMP is no longer necessary Using the C standard library for parallelism and concurrency HPX the same language features can be extended to distributed codes providing a higher level C interface to distributed programming than the Message Passing

Interface MPI The book starts with the single threaded implementation of the fractal sets e g Julia set and Mandelbrot set using the C Standard Library SL s container and algorithms This code base is used for parallel implementation using low level threads asynchronous programming parallel algorithms and coroutines The asynchronous programming examples are then extended to distributed programming using the C standard library for parallelism and concurrency HPX Octo Tiger an astrophysics code for stellar merger is used as a showcase for a portable efficient and scalable high performance application using HPX The book s core audience is advanced undergraduate and graduate students who want to learn the basics of parallel and distributed C programming but are not computer science majors Basic C knowledge like functions classes loops and conditional statements is assumed as a requirement while C advanced topics like generic programming lambda functions smart pointers and move semantics are briefly summarized in the appendix Operations Research Proceedings 2005

Rabhi,Sergei Gorlatch,2011-06-28 Patterns and Skeletons for Parallel and Distributed Computing is a unique survey of research work in high level parallel and distributed computing over the past ten years Comprising contributions from the leading researchers in Europe and the US it looks at interaction patterns and their role in parallel and distributed processing and demonstrates for the first time the link between skeletons and design patterns It focuses on computation and communication structures that are beyond simple message passing or remote procedure calling and also on pragmatic approaches that lead to practical design and programming methodologies with their associated compilers and tools The book is divided into two parts which cover skeletons related material such as expressing and composing skeletons formal transformation cost modelling and languages compilers and run time systems for skeleton based programming design patterns and other related concepts applied to other areas such as real time embedded and distributed systems It will be an essential reference for researchers undertaking new projects in this area and will also provide useful background reading for advanced undergraduate and postgraduate courses on parallel or distributed system design

Domain-Specific Program Generation Christian Lengauer,Don Batory,Charles Consel,Martin Odersky,2004-11-18 Program generation holds the promise of helping to bridge the gap between application level problem solutions and efficient

implementations at the level of today's source programs as written in C or Java. Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product. This book is about domain specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed revised full papers presented are organized into topical sections on surveys of domain specific programming technologies, domain specific programming languages, tool support for program generation, domain specific techniques for program optimization.

Grid Computing: Software Environments and Tools Omer F. Rana, Jose Cardoso Cunha, 2007-07-03. Grid Computing requires the use of software that can divide and farm out pieces of a program to as many as several thousand computers. This book explores processes and techniques needed to create a successful Grid infrastructure. Leading researchers in Europe and the US look at the development of specialist tools and environments which will encourage the convergence of the parallel programming, distributed computing and data management communities. Specific topics covered include: An overview of structural and behavioural properties of Computer Grid applications; Discussion of alternative programming techniques; Case studies displaying the potential of Computer Grids in solving real problems. This book is unique in its outline of the needs of Computational Grids both in integration of high end resources using OGSA Globus and the loose integration of Peer 2 Peer Entropia United Devices. Readers will gain an insight on the limitations of existing approaches as well as the standardisation activities currently taking place.

Programming Environments for Massively Parallel Distributed Systems Karsten M. Decker, Rene M. Rehmann, 2013-04-17. Massively Parallel Systems (MPSs) with their scalable computation and storage space promises are becoming increasingly important for high performance computing. The growing acceptance of MPSs in academia is clearly apparent. However, in industrial companies their usage remains low. The programming of MPSs is still the big obstacle and solving this software problem is sometimes referred to as one of the
