Hierarchical Scheduling in Parallel and Cluster Systems Sivarama Dandamudi, 2012-12-06 Multiple processor systems are an important class of parallel systems. Over the years several architectures have been proposed to build such systems to satisfy the requirements of high performance computing. These architectures span a wide variety of system types. At the low end of the spectrum we can build a small shared memory parallel system with tens of processors. These systems typically use a bus to interconnect the processors and memory. Such systems, for example, are becoming commonplace in high performance graphics workstations. These systems are called uniform memory access (UMA) multiprocessors because they provide uniform access of memory to all processors. These systems provide a single address space which is preferred by programmers. This architecture, however, cannot be extended even to medium systems with hundreds of processors due to bus bandwidth limitations. To scale systems to medium range, i.e., to hundreds of processors, non-bus interconnection networks have been proposed. These systems, for example, use a multistage dynamic interconnection network. Such systems also provide global shared memory like the UMA systems. However, they introduce local and remote memories which lead to non-uniform memory access (NUMA) architecture. Distributed memory architecture is used for systems with thousands of processors. These systems differ from the shared memory architectures in that there is no globally accessible shared memory. Instead, they use message passing to facilitate communication among the processors. As a result, they do not provide a single address space.

Arbitration in the 36th America's Cup Henry Peter, 2022-08-09 More than the most prestigious regatta and match race in the sport of sailing, the America's Cup is a test of boat design, sail design, and management skills. It is not surprising that its passionate skippers, builders, and managers often become embroiled in disputes. Recognizing this and the need to deal quickly and professionally with any divergency, an arbitration panel has become an established part of the Cup's organization. This book, the fifth of a series that over time constitutes a unique corpus of decisions rendered over more than twenty years, compiles all the directions and decisions issued by the 36th America's Cup Arbitration Panel in the context of the nineteen cases submitted to it, as well as all supporting documents elucidating the context in which the decisions were issued. In addition to all the decisions, the following are also included: the Protocol of the 36th America's Cup and amendments made thereto; the 36th America's Cup Arbitration Panel Rules of Procedure; applicable versions of the World Sailing Racing Rules; the AC75 Class Rule; and the so-called Prada Cup Conditions and Match Conditions, previously unpublished documents related to proceedings which have led to the amendment and/or interpretation of the Deed of Gift by the Supreme Court of the State of New York and previously unpublished court-related material pertaining to the key Mercury Bay case (1987/1990). An extensive and valuable introduction provides detailed historical and factual context. Expert commentary addresses issues of special interest decided by the 36th America's Cup Arbitration Panel, including privileged insight into the previously undocumented dispute resolution during the 35th America's Cup (2013/2017) and the World Intellectual Property Organization
