The Routledge International Handbook of Philosophies and Theories of Early Childhood Education and Care Tricia David, Kathy Goouch, Sacha Powell, 2015-10-05 The Routledge Handbook of Philosophies and Theories of Early Childhood Education and Care brings together leading writers in the field to provide a much needed authoritative guide to the major philosophies and theories which have shaped approaches to Early Childhood Education and Care Providing a detailed overview of key concepts debates and practical challenges the handbook combines theoretical acumen with specific examples to show how philosophies and theories have evolved over the centuries and their impact on policy and society It examines the ways in which societies define and make sense of childhood and the factors that influence the development of philosophies about young children and their learning The collection offers an insight into the key

theorists and considers how the economics and politics of their time and personal ideology influenced their ideas about childhood. It looks at curricula and provision which have proved inspirational and how these have impacted on policy and practice in different parts of the world. The handbook also explores alternative and perhaps less familiar philosophies and ideas about babies and young children, their place in society and the ways in which it might be appropriate to educate them. Bringing together specially commissioned pieces by a range of international authors, this handbook will enable academics, research students, practitioners and policy makers to reflect on their own understandings and approaches as well as the assumptions made in their own and other societies.

Contexts for Young Child Flourishing Darcia Narvaez, Julia M. Braungart-Rieker, Laura E. Miller-Graff, Lee T. Gettler, Paul D. Hastings, 2016-07-01. Human beings have the most immature newborn and longest maturational schedule of any animal. Only 25% of the adult brain size is developed at full term birth and most of the brain's size and volume is co-constructed by caregivers in the first years of life. As a result, early life experience has long-term effects on physiological and psychological wellbeing. *Contexts for Young Child Flourishing* uses an evolutionary systems framing to address the conditions and contexts for child development and thriving. Contributors focus on flourishing, optimizing individual physiological, psychological, emotional and communal social community functioning. Converging events make this a key time to reconsider the needs of children and their optimal development in light of increasing understanding of human evolution, the early dynamism of development and how these influence developmental trajectories. There is a great deal of misunderstanding both among researchers and the general public about what human beings need for optimal development. As a result, human nature unnecessarily can be misshaped by policies, practices and beliefs that don't take into account evolved needs. Empirical studies today are better able to document and map the long-term effects of early deficits or early assets, mostly in animal models but also through longitudinal studies. An interdisciplinary set of scholars considers child flourishing in regards to issues of development, childhood experience and wellbeing. Scholars from neuroscience, anthropology and clinical and developmental studies examine the buffering effects of optimal caregiving practices and shed light on the need for new databases, new policies and altered childcare practices.

Acquiring Culture (Psychology Revivals) Gustav Jahoda, Ioan Lewis, 2015-03-27. Until the 70s and 80s, anthropologists studying different cultures had mainly confined themselves to the behaviour and idea systems of adults. Psychologists, on the other hand, working mainly in Europe and America, had studied child development in their own settings and simply assumed the universality of their findings. Thus, both disciplines had largely ignored a crucial problem area: the way in which children from birth onwards learn to become competent members of their culture. This process, which has been called the quintessential human adaptation, constitutes the theme of this volume, originally published in 1988. It derives from a workshop held at the London School of Economics which brought together fieldworkers who in their studies had paid more than usual attention to children in their cultures. Their experience and foci of interest were varied, but this very diversity serves to illuminate different facets of the acquisition of

culture by children ranging in age from pre verbal infants to adolescents Evolutionarily primed for culture learning children are responsive to a rich web of influences from subtle and indirect as in their music and dance to direct teaching in the family guided by culture specific ideas about child psychology Some of the salient things they learn relate to gender status and power critical for the functioning of all societies The introductory essay provides the necessary historical background of the development of child study in both anthropology and psychology and outlined how future research in the ethnography of childhood should proceed The book concludes with an annotated bibliography providing a guide to the literature from 1970 onwards
