The Sirens of Mars Sarah Stewart Johnson, 2020 Mars was once similar to Earth but today there are no rivers no lakes no oceans Yet multiple spacecraft are circling Mars sweeping over Terra Sabaea Syrtis Major the dunes of Elysium and Mare Sirenum on the brink perhaps of a staggering find Johnson tells the story of how she and other researchers have scoured Mars for signs of life She interlaces her journey as a female scientist with tales of other seekers to offer an unlikely natural history of a place where no human has ever set foot while providing a vivid portrait of our quest to defy our isolation in the cosmos adapted from jacket

The Case For Mars Robert Zubrin, 2012-12-11 Since the beginning of human history Mars has been an alluring dream the stuff of legends gods and mystery The planet most like ours it has still been thought impossible to reach let alone explore and inhabit Now with the advent of a revolutionary new plan all this has changed Leading space exploration authority Robert Zubrin has crafted a daring new blueprint Mars Direct presented here with illustrations photographs and engaging anecdotes The Case for Mars is not a vision for the far future or one that will cost us impossible billions It explains step by step how we can use present day technology to send humans to Mars within ten years actually produce fuel and oxygen on the planet's surface with Martian natural resources how we can build bases and settlements and how we can one day terraform Mars a process that can alter the atmosphere of planets and pave the way for sustainable life

Planetary Geology Angelo Pio Rossi, Stephan van Gasselt, 2017-11-28 This book provides an up to date interdisciplinary geoscience focused overview of solid solar system bodies and their evolution based on the comparative description of processes acting on them Planetary research today is a strongly multidisciplinary endeavor with efforts coming from engineering and natural sciences Key focal areas of study are the solid surfaces found in our Solar System Some have a direct interaction with the interplanetary medium and

others have dynamic atmospheres In any of those cases the geological records of those surfaces and sub surfaces are key to understanding the Solar System as a whole its evolution and the planetary perspective of our own planet This book has a modular structure and is divided into 4 sections comprising 15 chapters in total Each section builds upon the previous one but is also self standing The sections are Methods and tools Processes and Sources Integration and Geological Syntheses Frontiers The latter covers the far reaching broad topics of exobiology early life extreme environments and planetary resources all areas where major advancements are expected in the forthcoming decades and both key to human exploration of the Solar System The target readership includes advanced undergraduate students in geoscience related topics with no specific planetary science knowledge undergraduates in other natural science domains e g physics astronomy biology or chemistry graduates in engineering and space systems design who want to complement their knowledge in planetary science The authors backgrounds span a broad range of topics and disciplines rooted in Earth geoscience their expertise covers remote sensing and cartography field mapping impact cratering volcanology and tectonics sedimentology and stratigraphy exobiology and life in extreme environments planetary resources and mining Several generations of planetary scientists are cooperating to provide a modern view on a discipline developed from Earth during and through Space exploration

Human Travel to the Moon and Mars Matt Doeden, 2011-08-01 Americans are divided over the future of the U.S. space program. Some say it's time to send astronauts back to the Moon as well as to Mars for the first time. They believe that exploring these worlds will lead to all sorts of payoffs including new scientific knowledge new sources of energy and perhaps even future homes for humans. Others strongly disagree. They argue that the dangers and costs of crewed space exploration are too great to be justified. They believe that robots can do a better job of exploring the Moon Mars and other parts of space for much less money and with no risk to human life. Understanding this debate involves looking at the facts and figures and talking to experts on both sides. It also involves some probing questions. In a time of economic crisis should the United States be spending billions of dollars on crewed space exploration? How would science industry and human society benefit from crewed missions to the Moon and Mars? Who should foot the bill the United States a consortium of nations or private business? To answer these questions this book looks at the costs of crewed missions to Mars and the Moon as well as the potential payoff the dangers of space exploration both physical and psychological and the potential for human settlement on Mars. We'll hear a variety of opinions from astronauts astronomers U.S. presidents and NASA officials. Supplemented with quotes anecdotes and discussions from the pages of USA TODAY The Nation's No. 1 Newspaper this book will broaden your understanding of the issue and help you form your own opinion either for or against crewed missions to the Moon and Mars.

Experiments in Reduced Gravity Nikolaus Kuhn, 2014-09-06 *Experiments in Reduced Gravity: Sediment Settling on Mars* is the first book to be published that reflects experiments conducted on Martian geomorphology in reduced gravity. This brief yet important book on sediment experiments assesses the theoretical and empirical foundation of the models used to analyze the increasing information we have on the past geography on Mars. The book also evaluates the need to develop new methods for analyzing new information by providing a conceptual outline and a case study on how experiments can be used to test current theoretical considerations. The conceptual approach to identifying

the need for and role of experiments will be of interest to planetary scientists and geoscientists not necessarily involved with Mars but those using experiments in their research who can apply the book's concepts Includes figures diagrams illustrations and photographs to vividly explore experiments and outcomes in reduced gravity Provides an outline of planned experiments and questions related to Martian geomorphology Features results from the MarsSedEx 1 Experiment in 2012

Making Time on Mars Zara Mirmalek, 2020-04-07 An examination of how the daily work of NASA's Mars Exploration Rovers was organized across three sites on two planets using local Mars time In 2004 mission scientists and engineers working with NASA's Mars Exploration Rovers MER remotely operated two robots at different sites on Mars for ninety consecutive days An unusual feature of this successful mission was that it operated on Mars time the daily work was organized across three sites on two planets according to two Martian time zones In *Making Time on Mars* Zara Mirmalek shows that this involved more than a resetting of wristwatches the team's struggle to synchronize with Mars time involved technological and communication breakdowns informal workarounds and extra work to support the technology that was intended to support people Her account of how NASA created an entirely new temporality for the MER mission offers insights about the assumptions behind the organizational relationship between clock time and work Mirmalek herself a member of the mission team offers an insider's view of the MER workplace and community She describes the discord among MER's multiple temporalities and examines issues of professional identity that helped shape the experience of working according to Mars time Considering time and work relationships through a multidisciplinary lens Mirmalek shows how contemporary and historical human technology relationships inform assumptions about the unalterability of clock time She argues that the organizational connection between clock time and work although still operational is outdated
