Ryuji Miyamoto Architectural Apocalypse:

A Critical History of Contemporary Architecture Dr Elie G Haddad, Asst Prof David Rifkind, Ms Sarah Deyong, 2014-03-28

This book provides a comprehensive critical overview of the developments in architecture from 1960 to 2010. The first section provides a presentation of major movements in architecture after 1960 and the second a geographic survey that covers a wide range of territories around the world. This book not only reflects the different perspectives of its various authors but also charts a middle course between the aesthetic histories that examine architecture solely in terms of its formal aspects and the more ideological histories that subject it to a critique that often skirts the discussion of its formal aspects.

Advances in Spatial Planning Jaroslav Burian, 2012-03-21. Spatial planning is a significant part of geosciences that is developing very rapidly. Many new methods and modeling techniques like GIS Geographical Information Systems GPS Global Positioning Systems or remote sensing techniques have been developed and applied in various aspects of spatial planning. The chapters collected in this book present an excellent profile of the current state of theories, data analysis methods and modeling techniques used in several case studies. The book is divided into three main parts: Theoretical aspects of spatial planning, Quantitative and computer spatial planning methods, and Practical applications of spatial planning that cover the latest advances in urban city and spatial planning. The book also shows different aspects of spatial planning and different approaches to case studies in several countries.

Phenomenology of the Winter-City Abraham Akkerman, 2016-01-12. This book explores how the weather and city form impact the mind and how city form and mind interact. It builds on Merleau-Ponty's contention that mind, the human body, and the environment are intertwined in a singular composite and on Walter Benjamin's suggestion that mind and city form in mutual interaction through history have set the course of civilization. Bringing together the fields of philosophy, urbanism, geography, history, and architecture, the book shows the association of existentialism with prevalence of mood disorder in Northern Europe at the close of Little Ice Age. It explains the implications of city form and traces the role of the myths and allegories of urban design as well as the history of gender projection onto city form. It shows how urbanization in Northern Europe provided easier access to shelter yet resulted in sunlight deprivation and yielded increasing incidence of depression and other mental disorder among the European middle class. The book uses the examples of Kierkegaard, Nietzsche, Dostoevsky, and Kafka to show how walking through the streets, squares, and other urban voids became the informal remedy to mood disorder, a prominent trait among founders of modern Existentialism. It concludes by describing how the connection of anguish and violence is relevant to winter depression in cities in North America in particular.
