**South Shore** Larry McCormick, 1984 The south shore of Long Island one of New York's greatest recreational assets is receding at the rate of up to six feet per year In many cases efforts to halt this erosion actually have increased it Buildings once thought safely constructed back from high tidemarks today protrude far into the water Even more the number of homes and facilities built too close to the sea's edge has dramatically increased making the south shore probably less ready to withstand a major storm than at the time of the cataclysmic hurricane of 1938 Thus the question of what to do now to overcome and avoid these hazards takes on real urgency Pointing to past mistakes many Long Islanders insist that only by acting in an informed reasonable way can safe and environmentally sound development be possible for everyone

**Natural Hazards** Edward A. Keller, Duane E. DeVecchio, 2019-03-29 The new revised fifth edition of Natural Hazards remains the go to introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society The text integrates principles of geology hydrology meteorology climatology oceanography soil science ecology and solar system astronomy The textbook explains the earth processes that drive hazardous events in an

understandable way illustrates how these processes interact with our civilization and describes how we can better adjust to their effects. Written by leading scholars in the area, the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards, disasters, and catastrophes. The text is designed for learning with chapters broken into small consumable chunks of content for students. Each chapter opens with a list of learning objectives and ends with revision as well as high-level critical thinking questions. A Concepts in Review feature provides an innovative end-of-chapter section that breaks down the chapter content by parts, reviewing the learning objectives, summary points, important visuals, and key terms. New case studies of hazardous events have been integrated into the text, and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for non-science majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society.

*Weathering and Erosion* Clive Gifford, 2005. This series offers a detailed, informative, and lively discussion on four of the key areas of physical geography. Each book helps develop the knowledge of how specific features of the Earth are formed, their causes, and effects, patterns, and processes, and our study and understanding of them. The series aims not only to answer but also to inspire questions about different environments and landscapes and our relationships with some of the greatest forces of nature we experience on Earth. Photographs bring the effects of the subject vividly to life, while diagrams enhance the reader's practical understanding of the processes that have created the landscapes of the world in which we live today.

*Planetary Surface Processes* H. Jay Melosh, 2011-08-25. *Planetary Surface Processes* is the first advanced textbook to cover the full range of geologic processes that shape the surfaces of planetary-scale bodies. Using a modern quantitative approach, this book reconsiders geologic processes outside the traditional terrestrial context. It highlights processes that are contingent upon Earth's unique circumstances and processes that are universal. For example, it shows explicitly that equations predicting the velocity of a river are dependent on gravity; traditional geomorphology textbooks fail to take this into account. This textbook is a one-stop source of information on planetary surface processes, providing readers with the necessary background to interpret new data from NASA, ESA, and other space missions. Based on a course taught by the author at the University of Arizona for 25 years, it is aimed at advanced students and is also an invaluable resource for researchers, professional planetary scientists, and space mission engineers.

**Coastal Defences** Peter W. French, 2002-01-04. *Coastal Defences* aims to present the broad spectrum of methods that engineers use to protect the coastline and investigates the sorts of issues that can arise as a result. The first section of the book examines traditional hard techniques such as sea walls and groynes, whilst the second looks at the more recent

trend of using techniques more sympathetic to nature By looking at each of the main methods of coastal protection in detail the book investigates the rationale for using each method and the consequent management issues presenting a case for and against each of the techniques      *Invitation to Oceanography* Paul R. Pinet, 2003 *Invitation to Oceanography* Third Edition provides students with a fundamental overview of the four major branches of ocean science geology chemistry physics and biology The approach used is a broad one relying on basic concepts to explain the ocean s many mysteries Anybody whether sailor surfer beachcomber or student can learn about the processes and creatures of the oceans by reading this visually exciting book      Geological Hazards Fred G. Bell, 2003-02-27 Natural hazards cost the global economy over 50 000 million per year Two thirds of this is spent on damage repair the remainder represents the cost of predicting preventing and mitigating against disasters Man made hazards such as groundwater pollution subsidence and soil erosion add to this figure *Geological Hazards* is the first book to consider both natural and man made disasters in a single volume All major geological hazards are examined It presents a state of the art survey for students on civil engineering and physical geography courses as well as researchers and practicing civil engineers It examines methods of assessing evaluating and combatting hazards both natural and man made Richly illustrated it views the subject from an international perspective      **Fishery Bulletin of the Fish and Wildlife Service** ,1954
