Non-CO₂ Greenhouse Gases: Why and How to Control? J. van Ham, L.J.H.M. Janssen, Rob J. Swart, 2012-12-06 The background This volume contains the proceedings of the first International symposium on Non CO₂ Greenhouse Gases Why and How to Control held in Maastricht The Netherlands from 13-15 December 1993 Of the known greenhouse gases political attention to date has been primarily focused on carbon dioxide CO₂ and the 2 CFCs the latter because of their interaction with stratospheric ozone The other greenhouse gases notably methane CH₄ nitrous oxide N₂O HCFCs HFCs and

tropospheric ozone and its precursors nitrogen oxides NO and carbon monoxide CO and volatile organic compounds VOCs may appear collectively to be of equal importance for global warming but have attracted less attention Nevertheless a comprehensive approach to climate change response taking into account all sources and sinks of all greenhouse gases is explicitly allowed in the Framework Convention on Climate Change The Netherlands policy on climate already addresses all greenhouse gases In order to stimulate the development of international climate policy on this subject the Dutch Ministry of Housing Physical Planning and Environment supported the initiative of organizing an international symposium on the science and policy of the non CO₂ greenhouse gases An important rationale behind this initiative was recognizing that for the non CO₂ greenhouse gases abatement options are available that do not only address other environmental problems but that also do not require the major structural changes in society that an effective CO₂ policy may require
