Loo Keng Hua Selected Papers:

Selected Papers Luogeng Hua, 1983 From the Preface by H Halberstam The unexpected arrival of Loo Keng Hua in Europe in the fall of 1978 was for many of us a romantic event a legend come to life What had long been and had seemed destined to remain merely a revered name in the mathematical annals of our times assumed suddenly the handsome presence of the man himself dignified yet jovial youthful yet wise serene yet ever questing for new achievements and we realized how very much we had missed by his thirty years absence from the international scene While the publication of theses Selecta from his writings needs no justification beyond what is in them it will I hope serve also as a way of saying a most cordial welcome back It has been an honor for me to play a small role in producing the Selecta To select only parts from the imposing whole is automatically to be wrong and it may well seem in the long run to quote loosely from a poem of Hua himself that I have repaid gifts in jade with artifacts of wood *International Symposium in Memory of Hua Loo Keng Sheng* Gong, Qi-keng Lu, Yuan Wang, Lo Yang, 2013-12-21 The international symposium on number theory and analysis in memory of the late famous Chinese mathematician Professor Hua Loo Keng took place in August 1988 at the Tsinghua University in Beijing Excellent survey lectures and expositions of the most recent results in number theory and analysis were given by experts from all over the world While Volume I focuses on number theory Volume II deals mainly with several complex variables differential geometry and classical complex analysis Both volumes also include two fascinating accounts of Professor Hua Loo Keng's life and work by Professor S Iyanaga and Professor Wang Yuan Highlights in Volume I D A Hejhal Eigenvalues of the Laplacian for $PSL(2, \mathbb{Z})$ Some new Results and Computational Techniques A A Karatsuba On the Zeros of Riemann's Zeta Function on the Critical Line H E Richert Aspects of the Small Sieve W M Schmidt On the Number of Good Simultaneous Approximations to Algebraic Numbers M V Subbarao Wang Yuan On a Generalized Waring's Problem in Algebraic Number Fields G WA1 4stholz From Baker to Mordell Highlights in Volume II F Capocasa F Catanese Periodic Meromorphic Functions and Lefschetz Type Theorems on Quasi Abelian Varieties S S Chern Families of Hypersurfaces Under Contact Transformations in \mathbb{R}^n G Dethloff H Grauert On the Infinitesimal Deformation of Simply Connected Domains in One Complex Variable D Drasin Asymptotic Periods of Entire and Meromorphic Functions D Gaier On the Convergence of the Bieberbach Polynomials in Regions With Corners Gong Sheng Zheng Xuena Distortion Theorem for Biholomorphic Mappings in Transitive Domains I C O Kiselman Tangents of Plurisubharmonic Functions A Koranyi Hua Type Integrals Hypergeometric Functions and Symmetric Polynomials J Mitchell Two Sided L^1 Estimates for Szegő Kernels on Classical Domains I Satake On the Rational Structures of Symmetric Domains I Y T Siu Some Problems of Rigidity in Several Complex Variables S T Yau F Zheng On Projective Manifolds Covered by Space in \mathbb{C}^n **Selected Papers Of Wang Yuan** Yuan Wang, 2005-06-07 This volume presents a comprehensive collection of Wang Yuan's original important papers which are not available elsewhere since the majority of the papers were published in China Covering both pure number theory and applied

mathematics this book is important for understanding Wang Yuan's academic career and also the development of Chinese mathematics in recent years since Wang Yuan's work has a wide ranging influence in China. Wang Yuan is a professor and academician of the Chinese Academy of Sciences. He received his honorable Doctorship from Hong Kong Baptist University. He has published 70 papers and ten books. **My Mathematical Life** Yuan Wang, 2024-03-21. This book is an autobiographical interview with Chinese Academician Yuan Wang on his experience in mathematical research. The book looks back on Wang's collaboration with his teacher Hua Loo Keng and younger scholars offering insights into fruitful cooperation in mathematical research. In this book Yuan Wang's path of studying Goldbach conjecture is revealed in detail from motivation to method. Then his work on algebraic number theory is traced back in a separate chapter. The book ends with two chapters which introduce Wang's interest in history of mathematics and his hobbies outside of mathematical research. Wang shows how a mathematician can in the same time be a historical and popular science writer and in particular a well received calligrapher. The book is intended for undergraduate and graduate students studying number theory. Researchers who are willing to learn from the experience of an established mathematician as well as math amateurs and general audience who are interested in Yuan Wang's life story might also find this book appealing. *Hua Loo-Keng* Yuan Wang, 1999. The distinguished mathematician Hua Loo Keng led an eventful and interesting life through a particularly difficult period in China. This biography originally published in Chinese in 1995 looks in detail at the transformation of Hua from a self taught individual into a world renown mathematician. Hua held a prominent position in the contemporary mathematics circle in China and thus this account of his life can be read as an invaluable historical evaluation of the development of mathematics in China especially during tumultuous events such as the Cultural Revolution and the Great Leap Forward. Besides giving a vivid illustration of Hua's research work in number theory and of his attitude towards and philosophy behind the learning and teaching of mathematics the author a student and close friend of Hua's delves into the latter's tireless efforts in popularizing mathematics in China until his death in 1985. Popularizing Mathematical Methods in the People's Republic of China L.K. Hua, Wang, 2012-12-06. Professor Hua Loo Keng is the first person to have undertaken the task of popularizing mathematical methods in China. As early as 1958 he proposed that the application of operations research methods be initiated in industrial production. With his students Yu Ming I Wan Zhe Xian and Wang Yuan Professor Hua visited various transportation departments to promote mathematical methods for dealing with transportation problems and a mass campaign was organized by them and other mathematicians to advance and apply linear programming methods to industrial production in Beijing and in Shandong province. However due to the fact that these methods have limited applications and their computation is rather complex their popularization and utilization in China have so far been restricted to a small number of sectors such as the above mentioned transportation departments. In 1958 Hua Loo Keng proposed the use of Input Output methods in the formulation of national economic plans. Apart from publicizing this method he carried out in depth research

on the subject He also gave lectures on related non negative matrix theory pointing out the economic significance of various theoretical results

Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07 This volume is about the life and work of Shiing Shen Chern 1911 one of the leading mathematicians of this century The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself Besides a selection of the mathematical papers the book also contains all his papers published after 1988

Selected Works of Kai Lai Chung Farid AitSahlia, 2008 This unique volume presents a collection of the extensive journal publications written by Kai Lai Chung over a span of 70 odd years It was produced to celebrate his 90th birthday The selection is only a subset of the many contributions that he made throughout his prolific career Another volume Chance and Choice published by World Scientific in 2004 contains yet another subset with four articles in common with this volume Kai Lai Chung s research contributions have had a major influence on several areas in probability Among his most significant works are those related to sums of independent random variables Markov chains time reversal of Markov processes probabilistic potential theory Brownian excursions and gauge theorems for the SchrAdinger equation As Kai Lai Chung s contributions spawned critical new developments this volume also contains retrospective and perspective views provided by collaborators and other authors who themselves advanced the areas of probability and mathematics

Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II

of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics. These are grouped by type of material. Publication dates range from the 1800s onwards. Hundreds of electronic resources, some online, both dynamic and static, some in fixed media, are listed among the paper resources. Amazingly, a majority of listed electronic resources are free.

Lectures on Gaussian Integral Operators and Classical Groups Yu. A. Neretin, 2011. This book is an elementary self-contained introduction to some constructions of representation theory and related topics of differential geometry and analysis. Topics covered include the theory of various Fourier-like integral operators such as Segal-Bargmann transforms, Gaussian integral operators in L^2 and in the Fock space, integral operators with theta kernels, the geometry of real and p -adic classical groups and symmetric spaces. The heart of the book is the Weil representation of the symplectic group, real and complex realizations, relations with theta functions and modular forms, p -adic and adelic constructions and representations in Hilbert spaces of holomorphic functions of several complex variables. This book is addressed to graduate students and researchers in representation theory, differential geometry, and operator theory. Prerequisites are standard university courses in linear algebra, functional analysis, and complex analysis.

Number Theory and Its Applications in China Yuan Wang, 1988. Emphasizes the accomplishments of Chinese number theorists during 1949-1979, a period when correspondence between China and other countries was discouraged. This work presents a survey of the significant contributions of Chinese mathematicians. It also reflects the developments and state of research in number theory in China.

Variant Construction from Theoretical Foundation to Applications Jeffrey Zheng, 2018-12-17. This open access book presents theoretical framework and sample applications of variant construction. The first part includes the components: variant logic, variant measurements, and variant maps, while the second part covers sample applications such as variation with functions, variant stream ciphers, quantum interference, classical quantum random sequences, whole DNA sequences, and multiple-valued pulse sequences. Addressing topics ranging from logic and measuring foundation to typical applications and including various illustrated maps, it is a valuable guide for theoretical researchers in discrete mathematics, computing, quantum, and communication scientists, big data engineers, as well as graduate and upper undergraduate students.

Springer-Verlag: History of a Scientific Publishing House Heinz Sarkowski, Heinz Götze, 1996-10-07. A chronicle written only by someone for whom the present is important. Goethe, Maximen und Reflexionen. The second volume of our company's history differs from the first in several ways. With a great appreciation of history, Heinz Sarkowski has impressively reconstructed the company correspondence, which is fortunately almost completely preserved and made it speak. There is an inexhaustible amount of correspondence pertaining

to the period I have taken it upon myself to cover and working through it properly not only would have required many years but also would have detracted from the immediacy of the account Thus I decided to proceed from personal experience to describe what has happened and to provide details gleaned from the correspondence I have counted here by no means only my own but rather the personal experiences of the many company members and employees who are mentioned below With the founding of the New York firm developments branch out becoming parallel but separate and the change from one scene to another repeatedly interrupts the continuing course of events and the chronological flow of the report In this connection the occasional repetition of certain facts was avoidable In some places however it seemed more appropriate not to interrupt particular lines of development but to describe them in continuity without regard to specific periods of time
