The Origin and Nature of the Emotions George Washington Crile,1915 *The Origin and Nature of Emotions* George W. Crile,2015-03-18 It would seem that if the striking changes produced by fear and anger and by physical trauma in the master organ of the body the brain were due to WORK then we should expect to find corresponding histologic changes in other organs of the body as well We therefore examined every organ and tissue of the bodies of animals which had been subjected to intense fear and anger and to infection and to the action of foreign proteins some animals being killed immediately some several hours after the immediate effects of the stimuli had passed some after seances of strong emotion had been repeated several times during a week or longer *The Origin and Nature of Emotions* W. Chhaya, 2024-02-29 This monograph is an extension of the earlier monographs dealing with the application of the new modified involuted manifold model. This monograph has two objectives. Firstly it seeks to integrate neuronal organization with cognitive functionalities. Secondly it tries to formalize a structural template of cognitive functionalities. It is based on the postulate that cognitive functionalities are essentially natural phenomena and therefore amenable to formal naturalistic description. Therefore it employs a topological model of spacetime proposed earlier to define a new framework wherein neuronal networks occupy the four dimensional configurations of spacetime and cognitive functionalities occupy higher dimensional configurations of spacetime. Using the Darwinian conception of natural selection the monograph outlines a model of natural selection operating at more than one level. Thus natural selection at the four dimensional configurations of spacetime leads to structural agnosticism so prevalent in neuronal organization. At the same time natural selection at the higher dimensional configurations of spacetime leads to natural selection of cognitive functionalities. Since the proposed model offers a new computational paradigm formalized in another monograph this monograph provides a new way to formalize cognitive computations. The Nature of Emotion Andrew S. Fox, Regina C. Lapate, Alexander J. Shackman, Richard J. Davidson, 2018-08-23 Building on the legacy of the groundbreaking first edition the Editors of this unique volume have selected more than 100 leading emotion researchers from around the world and asked them to address 14 fundamental questions about the nature and origins of emotion. For example: What is an emotion? How are emotions organized in the brain? How do emotion and cognition interact? How are emotions embodied in the social world? How and why are emotions communicated? How are emotions physically embodied? What develops in emotional development? At the end of each chapter the Editors Andrew Fox, Regina Lapate, Alexander Shackman and Richard Davidson highlight key areas of agreement and disagreement. In the final chapter *The Nature of Emotion: A Research Agenda for the 21st Century* the Editors outline their own perspective on the most important challenges facing the field today and the most fruitful avenues for future research. Not a textbook offering a single viewpoint *The Nature of Emotion* reveals the central issues in emotion research and theory in the words of many of the leading scientists working in the field today from senior researchers to rising stars providing a unique and highly accessible guide for students, researchers and clinicians. **The Origin and Nature of the Emotions**
