COLD SPRING HARBOR SYMPOSIA ON QUANTITATIVE BIOLOGY

If we may judge from the results of two years, the conference-symposia method as developed at the Biological Laboratory at Cold Spring Harbor is a successful experiment in method. The cooperation of outstanding chemists, physicists and mathematicians, as well as biologists, has been most gratifying. The unique bringing together of knowledge from these various sources upon a fundamental aspect of biology each year is already widely appreciated. Thus the annual volume resulting from the symposia and discussion is purchased in over twenty-five countries all over the world, and there is evidence that the distribution of the volumes is becoming extended.

This year the conference-symposia will be centered about photochemistry in biology and medicine. They

will take place during five weeks, June 26 to August 1. The general aspects which will be considered are: basic photochemistry (June 26-July 2), photosynthesis (July 3-July 16), photoreceptors and bioluminescence (July 17-July 23), and photochemistry in medicine (July 24-July 30).

While plans are still incomplete, it is already known that the following men will present papers, and, with five exceptions, will be in residence from one to five weeks at least:

Dr. Vernon M. Albers, physicist, Kettering Foundation, Antioch College; Dr. William Arnold, Biological Laboratories, Harvard University; Dr. Charles E. Billa, biochemist, director, Research Laboratories, Mead Johnson and Company; Dr. Harold F. Blum, assistant professor of physiology, University of California Medical School; Dr. F. S. Brackett, physicist, Bureau of Cotton Economics, Department of Agriculture; Dr. Dean Burk, associate physical chemist, Bureau of Chemistry and Soils, Department of Agriculture; Dr. E. S. Castle, assistant professor of physiology, Harvard University; Dr. M. Demerec, investigator, Department of Genetics, Carnegie Institution of Washington; Dr. N. R. Dhar, head of Chemistry Department, University of Allahabad (India); Dr. Robert Emerson, Biological Laboratory, California Institute of Technology; Dr. Henry Eyring, physical chemist, research associate, Princeton University; Dr. Hugo Fricke, in charge of biophysics laboratory, Biological Laboratory; Dr. H. Keffer Hartline, fellow medical physics, Johnson Foundation, University of Pennsylvania School of Medicine; Dr. E. Newton Harvey, professor of physiology, Princeton University; Dr. Selig Hecht, professor of biophysics, Columbia University; Dr. O. L. Inman, director, Kettering Foundation, Antioch College; Dr. H. V. Knorr, physicist, Kettering Foundation, Antioch College; Dr. Henry Laurens, professor of physiology, Tulane University School of Medicine; Dr. H. S. Mayerson, assistant professor of physiology, Tulane University School of Medicine; Dr. Harold Mestre, Department of Bacteriology, Yale University School of Medicine; Dr. Karl Meyer, Department of Ophthalmology, College of Physicians and Surgeons; Dr. W. A. Noyes, Jr., associate professor of chemistry, Brown University; Dr. Gerhard K. Rollefson, associate professor of chemistry, University of California; Dr. Paul Rothenmund, biochemist, Kettering Foundation for Study of Chlorophyll and Photosynthesis, Antioch College; Dr. S. E. Sheppard, chemist, assistant director Kodak Research Laboratories; Dr. Hugh S. Taylor, David B. Jones professor of chemistry, Princeton University; Dr. George Wald, Biological Laboratories, Harvard University; Dr. Ernst Wolf, Biological Laboratories, Harvard University; Dr. F. Paul Zscheile, Jr., Department of Chemistry, University of Chicago.

The Generation of Diversity Alfred I. Tauber, Scott H. Podolsky, 2000 This book is an intellectual history of the major theoretical problem in immunology and its resolution in the post World War II period In recent years immunology has been one of the most exciting and successful fields of biomedical research this book provides essential background for understanding the conceptual conflicts occurring in the field

Contemporary Topics in Immunobiology Noel L. Warner, 2012-12-06 Although the field of contemporary immunobiology continues to diversify and encompass an increasing array of biomedical disciplines and topics there are frequently several themes that will receive special emphasis and prominence at any given time It is our hope that this series will reflect these themes and provide an appropriate venue for exposure of such topics at a useful time Although this particular volume is not designated as one of the special topics volumes in this series the selected topics have in essence come together to consider aspects of two major areas of considerable research interest in immunobiology today These concern new approaches and insights into an understanding of the tumor host relationship and aspects of cellular interactions and networks as approached by various different lines of investigation The province of tumor immunology remains one of the most challenging areas to immunologists as it of necessity involves not only developing an understanding of the neoplastic process itself and how the immune system responds but of eventually using this information in a diagnostic or therapeutic manner

A Historical Perspective on Evidence-Based Immunology Edward J. Moticka, 2015-11-25 A Historical Perspective on Evidence Based Immunology focuses on the results of hypothesis driven controlled scientific experiments that have led to the current understanding of immunological principles The text helps beginning students in biomedical disciplines understand the basis of immunologic knowledge while also helping more advanced students gain further insights The book serves as a crucial reference for researchers studying the evolution of ideas and scientific methods including fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR the generation of diversity and mechanism of tolerance of T cells and B cells the first cytokines the concept of autoimmunity the identification of NK cells as a unique cell type the structure of antibody molecules and identification of Fab and Fc regions and dendritic cells Provides a complete review of the hypothesis driven controlled scientific experiments that have led to our current understanding of immunological principles Explains the types of experiments that were performed and how the interpretation of the experiments altered the understanding of immunology Presents concepts such as the division of lymphocytes into functionally different populations in their historical context Includes fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR and the generation of diversity and mechanism of tolerance of T and B cells

Origins of Lymphocyte Diversity Cold Spring Harbor Symposium on Quantitative Biology (41, 1976, Cold Spring Harbor, NY), 1976

Evolution and Variation of Multigene Families T. Ohta, 2013-03-08 During the last decade and a half studies of evolution and variation have been

revolutionized by the introduction of the methods and concepts of molecular genetics We can now construct reliable phylogenetic trees even when fossil records are missing by comparative studies of protein or mRNA sequences If in addition paleontological information is available we can estimate the rate at which genes are substituted in the species in the course of evolution Through the application of electrophoretic methods it has become possible to study intraspecific variation in molecular terms We now know that an immense genetic variability exists in a sexually reproducing species and our human species is no exception The mathematical theory of population genetics particularly its stochastic aspects in conjunction with these new developments led us to formulate the neutral theory of molecular evolution pointing out that chance in the form of random gene frequency drift is playing a much more important role than previously supposed I believe that the traditional paradigm of neo Darwinism needs drastic revision Also the importance of gene duplication in evolution as first glimpsed by early *Drosophila* workers has now been demonstrated by directly probing into genetic material Recently it has been discovered that some genes exist in large scale repetitive structures and that they are accompanied by newly described phenomena such as coincidental evolution Working out the population genetic consequences of multigene families is a fascinating subject for which Dr Ohta has been largely responsible

Avian Immunology A. Benedict, 2012-12-06 The ontogeny of lymphoid cells seems the most appropriate place to start The early events in T and B cell ontogeny are still confusing There seems to be no agreement on the data and on the semantics of the question of progenitor vs stem cells Nevertheless we are beginning to understand more about progenitor cells which are committed to particular cell lines and about stem cells in the sense of having almost unlimited capability of giving rise to undifferentiated progeny An important future development will be to determine the nature of the substances that attract stem cells and which are produced by specialized thymus epithelium and perhaps by the bursa The way stem cells recognize these signals is an important question to answer Not predictable from mammalian models has been the observation that there is a lack of cells called into the bursa even before the signal for entry of stem cells has been shut off A likely model suggested that after a certain point in development there were no longer any cells capable of migrating into the bursa and becoming B cells A fascinating possibility is the suggestion that a cell comes into the bursa is not committed then can still wander into the thymus This cell does not appear to have B cell characteristics that is immunoglobulin is not expressed on its surface
