**The Dimming of Starlight** Gonzalo Munévar, 2023 Galileo and Kepler dreamed of the possibility of space exploration although its reality was later underappreciated and even challenged by social ideological and scientific critics as a diversion from our problems on Earth The Dimming of Starlight tells the fascinating stories of how space exploration places us in unusual situations that force us to come up with new ideas about nature This strong connection between scientific exploration and scientific change makes us aware of a new panorama of problems dangers and opportunities that leads to new solutions and technologies that would have been unimaginable under old perspectives Thus the exploration of Venus led to the discovery of the destruction of Earth's Ozone layer This discovery will save hundreds of millions of lives in the coming centuries As we explore space we learn to protect our planet from catastrophe and all the while we change drastically our ideas about the nature of the universe With its account of serendipity and splendor the book invites readers on an exciting journey in which step by step we are shown the crucial importance of space exploration for humanity **An Aerospace Bibliography**, 1978 *Militarizing Outer Space* Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry Concentrating on weapons warfare and violence this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens The third and final volume in the groundbreaking European Astroculture trilogy Militarizing Outer Space zooms in on the interplay between security technopolitics and knowledge from the 1920s through the 1980s Often hailed as the site of heavenly utopias and otherworldly salvation outer space transformed from a promised sanctuary to a present threat where the battles of the future were to be waged Astroculture proved instrumental in fathoming forms and functions of warfare's futures past both on earth and in space The allure of dominating outer space the book shows was neither limited to the early twenty first century nor to current American space force rhetorics **Book Catalog of the Library and Information Services Division: Subject**

Library,1976      Media,Technology and Society Brian Winston,2002-09-11 Challenging the popular myth of a present day information revolution Media Technology and Society is essential reading for anyone interested in the social impact of technological change Winston argues that the development of new media forms from the telegraph and the telephone to computers satellite and virtual reality is the product of a constant play off between social necessity and suppression the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited      **God and the Universe** Arthur Gibson,2013-10-11 Ambitious controversial and absorbing God and the Universe tackles the highly charged issue of God's relevance in the light of new scientific thinking on cosmology Engaging with poststructuralism ethics mathematics and philosophy through the ages this persuasively argued book reinvigorates religious debate for the new millennium      *Special Bibliography Series* ,1957      The Arms Trade, Security and Conflict Paul Levine,Ron Smith,2003-05-15 An area of huge concern to many people around the world the economics of the Arms Industry are a vital strand that needs to be understood This volume brings together contributors from all over the globe and focuses on this important area      Bibliography of Space Books and Articles from Non-aerospace Journals, 1957-1977 John J. Looney,1980      **The Pursuit of Power** William H. McNeill,2024-05-31 Reminds us that all humankind has a shared past and particularly with regard to its choice of weapons and warfare a shared stake in the future Stuart Rochester The Washington Post Book World In this magnificent synthesis of military technological and social history William H McNeill explores a whole millennium of human upheaval and

traces the path by which we have arrived at the frightening dilemmas that now confront us McNeill moves with equal mastery from the crossbow banned by the Church in 1139 as too lethal for Christians to use against one another to the nuclear missile from the sociological consequences of drill in the seventeenth century to the emergence of the military industrial complex in the twentieth His central argument is that a commercial transformation of world society in the eleventh century caused military activity to respond increasingly to market forces as well as to the commands of rulers Only in our own time suggests McNeill are command economies replacing the market control of large scale human effort The Pursuit of Power does not solve the problems of the present but its discoveries hypotheses and sheer breadth of learning do offer a perspective on our current fears and as McNeill hopes a ground for wiser action Mr McNeill s comprehensiveness and sensitivity do for the reader what Henry James said that Turgenev s conversation did for him they suggest all sorts of valuable things This narrative of rationality applied to irrational purposes and of ingenuity cannibalizing itself is a work of clarity which delineates mysteries The greatest of them to my mind is why human beings have never learned to cherish their own species Naomi Bliven The New Yorker      *The Political Economy of Contemporary Human Civilisation, Volume II*

Sangaralingam Ramesh, 2025-03-21 This book the second of two volumes examines the evolution of humanity and development global economic systems to provide insight into the advances and challenges they have created By placing modern technology and global crises within the context of long term human development it evaluates the threat of climate change on future generations by showing how past civilizations have survived and succumbed to climate events The potential for artificial intelligence quantum computing nuclear fusion and biotechnology to combat the current global challenges is explored alongside possibilities of new technologies exacerbating poverty inequality and social division This book highlights the consequences of human cognition and the constant desire for economic growth and evaluates whether they have been a net positive for human society It will be of interest to students and researchers working on political economy and global challenges
