Gee, Victoria Pease, 2004 *Variscan-Appalachian Dynamics* José Ramón Martínez Catalán, 2002 Paleozoic and Mesozoic tectonic evolution of central and eastern Asia Gregory Arlen Davis, Marc S, 2001

Hendrix geology U of Montana and Davis earth sciences U of Southern California present 19 articles detailing ground based work on the history of assembly and intracontinental deformation of central and eastern Asia Chapters look at the structural thermochronologic and sedimentary records of the history of Paleozoic assembly in Mongolia and central and western China Further information is presented on Mesozoic deformation in orogenic belts of central and eastern Asia Asia s sedimentary basins are examined and the intracontinental deformation they record is documented Many of these contributions particularly the papers examining Mongolian geology are the first ground based articles written in English Annotation c Book News Inc Portland OR booknews com

Tectonics, Sedimentary Basins, and Provenance: A Celebration of the Career of William R. Dickinson Raymond V. Ingersoll, Timothy F. Lawton, Stephan A. Graham, 2017-12-28 Through a remarkable combination of intellect self confidence engaging humility and prodigious output of published work William R Dickinson influenced and challenged three generations of sedimentary geologists igneous petrologists tectonicists sandstone petrologists archaeologists and other geoscientists A key figure in the plate tectonic revolution of the 1960s and 1970s he explained how the distribution of sediments on Earth s surface could be traced to tectonic processes and is widely recognized as a founder of modern sedimentary basin analysis This volume consists of 31 chapters related to Dickinson s research interests many of the authors are his former students their students and their students students demonstrating his continuing profound influence The papers in this volume are an impressive tribute to the depth and breadth of Bill Dickinson s contributions to the geosciences

Evolution of Archean Crust and Early Life Yildirim Dilek, Harald Furnes, 2013-11-26 This book presents an integrated approach to the study of the evolution of the Archean lithosphere biosphere and atmosphere and as such it is a unique contribution to our understanding of the early Earth and life The structural and geochemical make up of both the oceanic and continental crust of the Archean Earth is documented in some case studies of various cratons and the implications of the Phanerozoic plate and plume tectonic processes for the Archean geology are discussed in several chapters in the book All chapters are process oriented and data rich and reflect the most recent knowledge and information on the Archean Earth The interdisciplinary approach of examining the evolution of the Archean crust oceans and life that we adopt in this book sets it apart from previous publications on Precambrian geology The book will be attractive to researchers in academia and in industry and to senior undergraduate students graduate students and faculty in earth and natural sciences

Arc-Continent Collision Dennis Brown, Paul D. Ryan, 2011-06-29 Arc continent collision has been one of the important tectonic processes in the formation of mountain belts throughout geological time and

it continues to be so today along tectonically active plate boundaries such as those in the SW Pacific or the Caribbean Arc continent collision is thought to have been one of the most important process involved in the growth of the continental crust over geological time and may also play an important role in its recycling back into the mantle via subduction Understanding the geological processes that take place during arc continent collision is therefore of importance for our understanding of how collisional orogens evolve and how the continental crust grows or is destroyed Furthermore zones of arc continent collision are producers of much of the worlds primary economic wealth in the form of minerals so understanding the processes that take place during these tectonic events is of importance in modeling how this mineral wealth is formed and preserved This book brings together seventeen papers that are dedicated to the investigation of the tectonic processes that take place during arc continent collision It is divided into four sections that deal firstly with the main players involved in any arc continent collision the continental margin the subduction zone and finally the volcanic arc and its mineral deposits The second section presents eight examples of arc continent collisions that range from being currently active through to Palaeoproterozoic in age The third section contains two papers one that deals with the obduction of large slab ophiolites and a second that presents a wide range of physical models of arc continent collision The fourth section brings everything that comes before together into a discussion of the processes of arc continent collision

The Acadian Orogeny David C. Roy, James William Skehan, 1993

Continental Reactivation and Reworking Geological Society of London, 2001 As a result of its bouyancy continental crust is rarely subducted meaning that successive episodes of continental deformation imparts a complex geological character that is not found in younger oceanic lithosphere

Orogeny Through Time Jean-Pierre Burg, 1997 This book presents a series of review articles on nine important ancient orogens on Earth Comparison of these mountain belts provides a wealth of information for the debate on whether there has been a change in mountain building processes through the history of the Earth As a precursor to these papers the rheology of the Earth s lithosphere through time is reviewed Theoretical analysis and insight into the behaviour of the lithosphere of other planets constrain mechanical considerations of the Earth s lithosphere It is clear from these overviews that geodynamic concepts and modelling and new techniques such as deep seismic profiling and geochronology are having a profound impact on orogenic studies

Ancient Oceans, Orogenic Uplifts, and Glacial Ice Lee J. Florea, 2018 This volume includes compelling science and field trips in Indiana Illinois Kentucky Michigan and Ohio Take a journey through the Heartland to sand dunes outcrops quarries rivers caves and springs that connect Paleozoic stratigraphy with the assembly of Gondwana continental glaciation with Quaternary geomorphology and hydrology and landscape with the human environment

From the Shield to the Sea Richard M. Ruffolo, Charles Norman Ciampaglio, 2011 Features field guides and descriptions of eight geological field trips of the area near Pittsburgh Pennsylvania The trips highlight the region s geology from eastern Ohio to the Central Appalachian Valley and Ridge

U.S. Geological Survey Bulletin Arthur Edward Nelson, James

George Evans, Thomas Llewellyn Wright, Margaret T. Mangan, Donald Alan Swanson, 1983 Deformation Quadrangle 1n the Stensgar Mountain Stevens County Washington By James G Evans Abstract Most deformation of the Middle and Late Proterozoic Deer Trail and Windermere Groups and Lower Cambrian Addy Quartzite and Old Dominion Limestone rocks in the Stensgar Mountain quadrangle occurred during the Mesozoic pre Late Jurassic possibly Early Jurassic or Triassic in connection with duplex thrusting The principal deformation occurred in stages that generally involved 1 thrusting 2 penetrative dynamothermal metamorphism in the greenschist facies and 3 renewed thrusting The initial thrusting may have included formation of the duplex fault zone moderate tilting of the sedimentary and volcanic rocks and possibly low grade metamorphism The dynamothermal metamorphism resulted in development of a slaty cleavage that dips steeply west as well as numerous minor and a few large folds that plunge at low to moderate angles generally north The folds have axial planes parallel to cleavage Clasts in conglomerates were flattened parallel to cleavage and their long axes were aligned north northeastward subparallel to fold axes This extension direction parallels the trend of the Kootenay arc a relation not typical of orogenic belts The dynamothermal metamorphism included coaxial compressive pulses separated by periods of stress relaxation The penetrative deformation could have been accompanied by slip on preexisting faults including a large strike slip component for the roof Stensgar Mountain thrust and floor Lane Mountain thrust thrusts of the duplex fault zone Later movements along these roof and floor thrusts and connecting splays are suggested by nonfolded traces of the faults and the faulted dynamothermally metamorphosed cataclasite adjacent to the Lane Mountain thrust The penetrative deformation that affected the Stensgar Mountain quadrangle also affected the rest of northeastern Washington and southeastern British Columbia it may have been the result of oblique convergence during Mesozoic subduction Paleozoic Plays of NW Europe A. A. Monaghan, J. R. Underhill, A. J. Hewett, J. A. E. Marshall, 2019-03-06 North Sea and onshore Netherlands and Germany Paleozoic hydrocarbon plays across parts of NW Europe remain relatively under explored both onshore and offshore This volume brings together new and previously unpublished knowledge about the Paleozoic plays of NW Europe to describe significant additional exploration opportunities outside and below existing plays The volume contains papers on Paleozoic plays in the North Sea Irish Sea onshore UK France and Switzerland They highlight how improvements in seismic data quality and the availability of previously unpublished well datasets form the basis for improved understanding of local to regional interpretations that move forward from generalized basin development models The improved structural trap and source rock basin definition feeds to better constrained locally variable burial uplift maturation and migration models Particularly notable are the significant mapped extents and thickness of Paleozoic source reservoir and seal rocks in areas previously dismissed as regional highs and platforms **Continental Basin and Orogenic Processes: Tectonic Deformation and Associated Landscape and Environmental Evolution** Xuhua Shi, Hanlin Chen, Rong Yang, Huiping Zhang, Xiaoping Yuan, 2022-09-16 The Geology of Ireland Charles Hepworth Holland, Ian Sanders, 2022-07-18 The Geology

The Life of Frank Coles Phillips (1902-1982) and the Structural Geology of the Moine Petrofabric Controversy Richard John Howarth,Bernard E. Leake,2002 Frank Coles Phillips was a photographer mineralogist and structural petrologist and was very influential both in the UK and abroad He was responsible for encouraging the development of structural geology as a discipline in Australia and for the adoption of the stereogram as a fundamental interpretational tool in structural geology in the UK Phillips was the first to apply the methods of structural petrology to unravel the complex structural history of the Moine rocks of northwestern Scotland with controversial results
