*Diagnosis and Management of Ocular Motility Disorders* Alec M. Ansons, Helen Davis, 2008-04-30 The aim of this book has always been to give guidance on the diagnosis and treatment of ocular motility disorders based on clinical experience as opposed to a comprehensive treatise on the subject drawn from the primary literature The Third Edition sees a new team of authors who have kept very much to this principle in their nevertheless thorough revision of the book Whilst there are no new chapters as such the immediate impact of the revision is in the improved page layout with increased use of diagrams and flowcharts There are new sections on feigned visual loss in adults and children the management of residual defects and the section on botulinum toxin

treatment in chapter 8 will be re written to take account of the great advances in this form of treatment

**Common Eye Diseases and Their Management** N.R. Galloway, 2013-11-11 This book is intended for the medical student and non specialist postgraduate It is being published at a time when hospital waiting lists for eye care in Great Britain have reached record levels and the need for more teaching at medical student level is becoming imperative In many medical schools the students have very little exposure to the specialty some students none at all This may be because in past years the emphasis has been on teaching ophthalmology at a postgraduate level and a considerable development of postgraduate teaching has occurred It had been inferred that more exposure of qualified general practitioners to the subject would reduce the hospital waiting lists since more eye care would take place in general practice It would appear that the reverse has taken place general practitioners being now more aware of eye problems send even more cases to the hospitals In the absence of an expansion of the hospital service there is an urgent need to improve primary care ophthalmology and this can best be done by placing more emphasis on the teaching of medical students It is against this background that the need to provide a new basic textbook in ophthalmology arises The book is therefore aimed primarily at the medical student It does however aim to make preliminary reading for the postgraduate student
