Rett Syndrome Clinical And Biological Aspects Studies On 130 Swedish Females:

Rett Syndrome - Clinical and Biological Aspects Bengt Hagberg, Maria Anvret, Jan Wahlström, 1993-07-30 This volume provides a detailed survey of the clinical development of Rett syndrome from its earliest manifestations in childhood to adulthood. The volume surveys the developmental profile of the disease, its characteristic cluster of symptoms and signs, and categorizes the four main clinical stages in the development of motor disability. Particular emphasis is given to Rett syndrome variants and other clinical conditions which manifest themselves in a similar way to Rett syndrome. The development of scoliosis with age and disease stage is analysed. The neurophysiologic, neuropathologic and neurochemical characteristics are also examined. In addition, the volume looks at the molecular genetics of the syndrome, drug treatment and possible future developments.

Assistive Technologies for Assessment and Recovery of Neurological Impairments Stasolla, Fabrizio, 2021-10-22 People with neurological disorders may experience significant problems: isolation, detachment and passivity while dealing with environmental requests. They constantly rely on caregivers and family assistance, which can create negative outcomes on their quality of life. An emerging way to overcome these issues is assistive technology-based interventions. AT-based programs are designed to fill the gap between human individual capacities or skills and environmental requests. These technologies can also bring about independence and self-determination and provide people with neurological disorders an active role, positive participation and an enhanced status in being able to achieve functional daily activities by reducing the roles of their families and caregivers. The positive impacts of this technology are an important area of research, and its usage for neurological disorders is critical for the assessment and recovery of patients. *Assistive Technologies for Assessment and Recovery of Neurological Impairments* explores the use of AT-based programs for promoting independence and self-determination of individuals with neurological disorders. The chapters discuss AT-based interventions in detail, with the specific technologies that are being used, the positive effects on patients, and evidence-based practices. This book also focuses on specific technologies such as virtual reality (VR) setups and augmented reality (AR) as valid ecological environments for patients that ensure methodological control and behavioral tracking for both assessment and rehabilitation purposes. This book is essential for occupational therapists, speech therapists, physiotherapists, neurologists, caregivers, psychologists, practitioners, medical professionals, medical technologists, IT consultants, academicians, and students interested in assistive technology interventions for people with neurological impairments.
