Affect Regulation and the Origin of the Self Allan N. Schore, 2015-11-19 For over three decades Allan N Schore has authored numerous volumes chapters and articles on regulation theory a biopsychosocial model of the development psychopathogenesis and treatment of the implicit subjective self The theory is grounded in the integration of psychology psychiatry and neuroscience and it is now being used by both clinicians to update psychotherapeutic models and by researchers to generate research First published in 1994 this pioneering volume represented the inaugural expression of his interdisciplinary model and has since been hailed by a number of scientific and clinical disciplines as a groundbreaking and paradigm shifting work This volume appeared at a time when the problem of emotion ignored for most of the last century was finally beginning to be addressed by science including the emergent field of affective neuroscience After a century of the dominance of the verbal left brain it presented a detailed characterization of the early developing right brain and its unique social emotional and survival functions not only in infancy but across all later stages of the human life span It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind Affect Regulation and the Origin of the Self acts as a keystone and foundation for all of Schore's later writings as every subsequent book article and chapter that followed represented expansions of this seminal work

Concepts, Clinical Developments, and Therapeutic Advances in Cancer Chemotherapy Franco M. Muggia, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in-depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these

reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more *Advances in Pharmacology*, 1990-09-21 **The Science of Cancer Treatment** B.A. Ponder, M.J.

Waring, 2012-12-06 Many of the most effective treatments for disease have been discovered empirically Nowadays however we think that understanding the biology of a disease will lead us to design better treatments and to improve the application of treatments we already have To accomplish this vast sums are expended on cancer research Even so to the casual observer of clinical oncology the proliferation of studies and trials of ever different combinations of therapies looks like empiricism at the best In the first part of this book we have asked practising clinicians in different specialities to assess the contributions of biology and of empiricism to current approaches to treatment In the second part we have asked researchers in different areas of biology applied to cancer to assess the present and likely future impact of their type of biology on cancer treatment and control IX 1 Surgery M BAUM OBJECTIVES OF CANCER TREATMENT The objectives of cancer treatment can be defined according to population requirements or according to the needs of the individual As far as the population is concerned Government authorities are entitled to expect that cancer treatment will lead to mortality reductions and cost containment A Group-Analytic Exploration of the Sibling Matrix Val Parker, 2019-11-19 A Group Analytic Exploration of the Sibling Matrix How Siblings Shape our Lives offers a fresh approach to siblings recognising how these relationships are embedded in the framework of the family and how sibling experiences shape our lives influencing relationships with partners friends and colleagues and affecting how we take our place in groups and in society The book is divided into three parts Part One focuses on the sibling life cycle exploring how these relationships shift and change throughout life according to context and circumstances In Part Two Parker uses clinical examples to consider how therapists working with individuals and groups might expand their thinking to incorporate the sibling matrix The final part investigates how the sibling matrix manifests in organisational life and considers how we might develop mutuality and cooperation in our universal sibling matrix Drawing on the author's wealth of experience as a clinician the book incorporates compelling personal stories and clinical examples to bring to life the realities and nuances the good and bad the healthy and supportive and also the potentially damaging aspects of sibling relationships Accessibly written this is a rich and rewarding invitation to reflect on our own experience whether as

clinicians researchers or as members of our own sibling matrix *Developments In Cancer Chemotherapy* Robert I. Glazer, 2019-06-04 First published in 1988 developments in cancer chemotherapy offers a well rounded guide into the many facets and factors regarding chemotherapy as a method of treatment Split into 9 chapters this volume explores the nature of cancer cells and their development regulation of cancer cells and using the appropriate therapy tailored to the patient's needs

DNA Damage and Repair A. Castellani, 2013-03-09 The First International Congress on DNA Damage and Repair was held in Rome Italy July 12 17 1987 It was organized by the Italian Commission for Nuclear Alternative Energy Sources The subject of DNA damage and repair involves almost all the fields of biological sciences Some of the more prominent ones include carcinogenesis photobiology radiation biology aging enzymology genetics and molecular biology These individual fields have their own international meetings and although the meetings often have sessions devoted to DNA repair they do not bring together a wide diversity of international workers in the field to exchange ideas The purpose of the Congress was to facilitate such an exchange among scientists representing many fields of endeavor and many countries The 37 manuscripts in this volume presented by the invited speakers during the four and half days of the Congress encompass the field of DNA damage and repair They cover biological systems ranging from molecules to humans and deal with damages and repair after treatment of cells with various types of radiations chemicals and exogenous and endogenous oxidative damages The Congress and its Proceedings are dedicated to two international leaders in the field of DNA damage and repair Alexander Hollaender of the United States and Adriano Buzzati Traverso of Italy Hollaender who died in December 1986 was one of the first investigators to recognize the damage to DNA was important in cell killing and mutagenesis His early work indicated that cells could recover from radiation injury

Quinolone Antibacterials Jochen Kuhlmann, A. Dalhoff, H.-J. Zeiler, 2012-12-06 It has been over 30 years since the first clinically important member of the quinolone class nalidixic acid was introduced into medical practice The modification produced in the quinolone nucleus by introducing a fluorine at the 6 position led to the discovery of the newer fluoroquinolones with enhanced antibacterial activities as compared to nalidixic acid By now a great deal of preclinical and clinical experience has been obtained with these agents The intense interest in this class of antibacterial agents by chemists microbiologists toxicologists pharmacologists clinical pharmacologists and clinicians in various disciplines encouraged us to summarize the information on the history chemistry mode of action and in vitro properties kinetics and efficacy in animals mechanisms of resistance toxicity clinical pharmacology clinical experience and future prospects in one volume of the Handbook of Experimental Pharmacology As this series deals predominantly with experimental characteristics of drugs our volume is dedicated specifically to quinolones and emphasizes principally their preclinical and clinical pharmacological characteristics despite the existence of several summaries on quinolones The chemistry of the quinolones is described in detail The chapter on the mode of action of quinolones reports the conclusive evidence that gyrase is the intracellular target of the quinolones however another enzyme topoisomerase IV may also be a

target for quinolones and the exact mechanisms by which quinolones act bactericidally are far from being understood

Bulldozed and Betrayed Adam Fairclough, 2021-09-08 Prior to the 2020 presidential election historians considered the disputed 1876 contest which pitted Republican Rutherford B Hayes against Democrat Samuel J Tilden the most controversial in American history Examining the work and conclusions of the Potter Committee the congressional body tasked with investigating the vote Adam Fairclough's *Bulldozed and Betrayed* Louisiana and the Stolen Elections of 1876 sheds new light on the events surrounding the electoral crisis especially those that occurred in Louisiana a state singled out for voter intimidation and rampant fraud The Potter Committee's inquiry led to embarrassment for Democrats uncovering an array of bribes forgeries and even coded telegrams showing that the Tilden campaign had attempted to buy the presidency Testimony also exposed the treachery of Hayes who once installed in the White House permitted insurrectionary Democrats to overthrow the Republican government in Louisiana that had risen to power during the early days of Reconstruction
