A Unified Theory of Information Design Nicole Amare,Alan Manning,2016-11-03 Communicative visuals including written text have a diverse range of forms and purposes In this volume the authors show that it is possible to both describe and explain the major properties of diverse visual communication forms and purposes within a common theoretical framework of information design and ethics For those unaccustomed to thinking of written text as a visual form belonging to the same general class as other visual forms colour texture shape imagery etc consider how a text s readability suffers if we remove all white space and punctuation which can be identified as visual signals of the same subtype as grid lines and bullet points dividing and calling attention to adjacent information The authors identify deep connections between foundational visual design elements and the grammar of language itself No physicist or chemist today

questions the value of a single theory that describes and explains a wide variety of phenomena but oddly enough the authors have frequently been asked why they are interested in advancing a unified theory of visual communication The simplest answer is to treat visual communication as a science and seeking unified theories is just what science does In more practical terms a unified approach to visual communication allows us to teach visual design students relatively few things that will enable them to do relatively many things

Academy-Industry Relationships and Partnerships Tracy Bridgeford, Kirk St. Amant, 2017-07-05 In the field of technical communication academics and industry practitioners alike regularly encounter the same question What exactly is it you do Their responses often reveal a fundamental difference of perspective on what the field is and how it operates For example academics might discuss ideas in terms of rhetorical theory while practitioners might explain concepts through more practical approaches involving best business practices And such differences can have important implications for how the field as a whole moves forward over time This collection explores ideas related to forging effective academia industry relationships and partnerships so members of the field can begin a dialogue designed to foster communication and collaboration among academics and industry practitioners in technical communication To address the various factors that can affect such interactions the contributions in this collection represent a broad range of approaches that technical communicators can use to establish effective academy industry partnerships and relationships in relation to an area of central interest to both education The 11 chapters thus present different perspectives on and ideas for achieving this goal In so doing the contributors discuss programmatic concerns workplace contexts outreach programs and research and writing The result is a text that examines different general contexts in which academia industry relationships and partnerships can be established and maintained It also provides readers with a reference for exploring such interactions How We Write

Mike Sharples, 2002-11-01 *How We Write* is an accessible guide to the entire writing process from forming ideas to formatting text. Combining new explanations of creativity with insights into writing as design, it offers a full account of the mental, physical, and social aspects of writing. *How We Write* explores how children learn to write, the importance of reflective thinking, processes of planning, composing, and revising, visual design of text, cultural influences on writing, global hypertext, and the future of collaborative and on-line writing. By referring to a wealth of examples from writers such as Umberto Eco, Terry Pratchett, and Ian Fleming, *How We Write* ultimately teaches us how to control and extend our own writing abilities. *How We Write* will be of value to students and teachers of language and psychology, professional and aspiring writers, and anyone interested in this familiar yet complex activity. Within this territory, the authors draw the boundaries broadly to include allied sites of research such as professional and technical writing, writing across the curriculum programs, writing centers, and writing program administration. The editors and their sixteen seasoned contributors have created a comprehensive and thoughtful exploration of composition studies as it stands in the early twenty-first century. Given the rapid growth of this field and the evolution of its research and pedagogical agendas over even the last ten years, this multi-vocal introduction is long overdue.
