Communication Difficulties in Childhood James Law, Alison

Parkinson, Rashmin Tamhne, 2017-11-22 For the vast majority of children acquiring speech and language skills is an effortless process. However, there is a sizeable proportion of children for whom this is not true. Difficulties they experience may be associated with other conditions such as cleft palate or hearing loss, or they may have no obvious cause. This book provides a comprehensive picture of the difficulties that occur when speech and language does not develop in the young child. Divided into two sections, the first focuses on how such children should be identified and assessed. The second section provides specific insights into communication difficulties in different conditions. Each is written by an expert practitioner and is illustrated with specific examples. Based on best clinical practice and research-based evidence, it is a practical guide fully referenced for those who wish to develop knowledge further. It is essential reading for all professionals who work with children, particularly those who work in community settings.

Cognitive-Behavioral Interventions in Educational Settings

Ray W. Christner, Rosemary B. Mennuti, 2013-06-19 Schools and school staff play a critical role in the cognitive, behavioral, emotional, social, and interpersonal development of children and adolescents. This second edition of *Cognitive Behavioral Interventions in Educational Settings* teaches readers to think strategically about the individual and plan for effective and specific interventions based on the student's age, developmental level, and presenting problems. It is written by forward-thinking, established professionals whose writing represents the state of the art in cognitive behavioral interventions in educational settings and presents evidence-based interventions for a variety of issues commonly seen in schools. Including both innovative and well-established approaches, they offer assessment methods and interventions for a variety of issues and concerns faced by school-aged youth. The use of case studies and session outlines, as well as the balance of theoretical and clinical concerns, enhances this book's value as a reference for both clinicians and students. New to this edition are topics on cyber bullying, parent and school consultation, school-wide positive behavioral support, and bipolar disorder. This is the ideal reference for those who wish to select and utilize precise interventions in school settings.

Selective Mutism in Children

Tony Cline, 1994 There have been important developments in the study and treatment of selective mutism during the ten years since the first edition of this book was published. Understanding of the subject has improved more dramatically than in any period since the phenomenon of children who talk readily in some situations but not in others was first recognised over a century ago. The second edition of this practical book reports recent developments in medication and combined therapies. New findings on the links between social anxiety, biological, and genetic factors and selective mutism are described. At the same time, the authors remain committed to understanding this pattern of behaviour in its full social context in family and community, and to employing behavioural approaches to intervention alongside other methods. This is the fullest and most authoritative book-length account of selective mutism in print.

Phobic and Anxiety Disorders in Children and Adolescents Thomas H. Ollendick, John S. March, 2004-01-15 This comprehensive interdisciplinary guidebook is designed for the mental health practitioner seeking to utilize proven and effective interventions with children and adolescents suffering from significant anxiety and phobic disorders Each chapter is co authored by a clinical child psychologist and a child psychiatrist framing the volume s unique and balanced perspective In addition each chapter presents state of the art assessment and treatment strategies for a panoply of phobic and anxiety disorders including both psychosocial and pharmacological interventions Moreover the volume addresses important conceptual epidemiological and ethical issues in working with children and adolescents All in all this guide will help address the wide chasm between clinical research and clinical practice uniting the forces intrinsic to child psychiatry and clinical child psychology

Mental Health Interventions with Preschool Children Robert D. Lyman, Toni L. Hembree-Kigin, 2013-11-11 Preschool children have been largely neglected in the mental health treatment literature although research has established that many behavioral and emotional disorders in children result from events occurring during the preschool years or are first manifested during this period This has occurred for several reasons Traditional psychoanalytic thinking has considered preschoolers to be too psychologically immature for

complete manifestations of psychopathology and the limited language abilities of young children have complicated assessment procedures and made them less appropriate for treatment approaches that are largely verbal in nature. In addition, the developmental complexity of the preschool period has deterred many researchers from investigating clinical issues with this age group. Partly as a result of the lack of information on preschoolers in the literature, practitioners have historically been uncomfortable in conducting assessments and initiating treatment with young children. They have often adopted a wait and see attitude in which formal mental health diagnosis and treatment are not implemented until after the child's entry into school. Unfortunately, such a delay may mean wasting the time during which mental health interventions can be maximally effective. Recently, this attitude has changed and practitioners now recognize the need for assessment and treatment of behavioral and emotional disorders early in life. What they require to assist them in the timely delivery of such services is information about assessment and treatment procedures specifically designed for preschoolers and with demonstrated efficacy with that age group.

Developing a Subtyping System for Selective Mutism Sharon Liza Cohan, 2007

The accumulated knowledge about selective mutism (SM) suggests that children who receive this diagnosis are a heterogeneous group; some are characterized by high levels of social anxiety, while others also exhibit behavioral and speech language problems. This study was designed to develop an empirically derived subtyping system for SM using parent report measures of social anxiety: Social Anxiety Scale for Children Revised (La Greca, Eyberg, Bishop, 2003). The sample consisted of 130 children recruited from a large SM advocacy group. Results from latent profile analysis comparing 2, 3, and 4 class models supported a 3 class solution, but a 4 class solution was also plausible. The 3 class model suggested the existence of an anxious/mildly oppositional subtype, an anxious/communication delayed subtype, and a primarily anxious subtype. Follow-up analyses for the 3 class model indicated no significant subtype differences in functional impairment (Child Anxiety Impact Scale, Parent Version; Langley, Bergman, McCracken, Bergman, Keller, Wood, Piacentini, Achenbach, 2001) and expressive/receptive language abilities (Vineland Adaptive Behavior Scales II; Sparrow, Cicchetti, Balla, 2005). Our results indicate that SM children are characterized by high levels of social anxiety, but they may also show speech language delays and low level behavior problems. Viewing SM as solely due to anxiety may cause researchers and clinicians to overlook important facets of the disorder.

The Practice of Child Therapy Richard J. Morris, Thomas R. Kratochwill, 2008 Consistent with previous editions this book assembles in a single volume summaries of the treatment literature and treatment procedures of the most common childhood behavior disorders facing persons who practice in applied settings clinics schools counseling centers psychiatric hospitals and residential treatment centers Its 16 chapters cover the historical context of child and adolescent therapy obsessive compulsive disorders childhood depression childhood fears phobias and related anxieties attention deficit hyperactivity disorder academic problems conduct disorder somatic disorders autism spectrum disorder intellectual disabilities children medically at risk sexual and other abuse of children child and adolescent psychopharmacotherapy prevention and child therapy and the law Key features include Treatment

Orientation Although some chapters include a discussion of theoretical issues the primary emphasis is on intervention techniques and strategies for changing various behavior and learning problems Case examples are often used to illustrate treatment procedures Empirical Orientation While most authors have adopted a broad based behavioral or cognitive behavioral orientation they were encouraged to review the entire treatment literature and to construct their presentations on the basis of empirically supported treatment techniques and procedures Psychopharmacotherapy Chapter The chapter on child and adolescent psychopharmacotherapy focuses on psychopharmacological interventions rather than on which drugs should be prescribed for specific behavior or learning problems Author Expertise Each chapter is written by experts who are well qualified to discuss treatment practices for the specific topic under discussion This book is intended for individuals who have entered or plan to enter the mental health profession or such related professions as counseling special education nursing and rehabilitation It is especially useful for individuals taking child and adolescent therapy and intervention courses and practicum courses Finally it is suitable for persons who work in applied settings including clinics schools counseling centers psychiatric hospitals and residential treatment centers

Annual Progress in Child Psychiatry and Child Development, 1990 Stella Chess, Margaret E. Hertzog, 1990-12

Designing Preschool Interventions David W.

Barnett, Susan H. Bell, Karen T. Carey, 2002-08-01 This practical text delineates the basic steps of developing effective interventions for learning and behavior difficulties in children aged two to five The authors set forth an ecological framework that stresses identifying problem situations rather than classifying individual children as disabled or at risk The core components of naturalistic intervention design are covered in depth including teacher and parent interviewing classroom observation and functional assessment team based problem solving strong accountability methods and legal and ethical safeguards Solidly grounded in empirical research the book presents examples of successful interventions for fostering social competence and language skills and improving interactions with parents teachers and peers
