Semantics from Different Points of View R. Bäuerle, U. Egli, A. v. Stechow, 2013-04-09 *Words in Time* Regine Eckardt, Klaus von Stechow, Christoph Schwarze, 2011-05-09 Meanings of words are constantly changing and the forces driving these changes are varied and diverse Linguistic analyses are usually concerned with language internal processes while investigations of language external historical developments tend to disregard linguistic considerations It is evident however that an investigation of diachronic semantics will have to consider both sides a specific theory of meaning including a proper place for lexical semantics on the one hand and incorporate knowledge about the world and the social and cultural environment of speakers who use language as a tool for communication on the other The collection focuses on meaning change as a topic of interdisciplinary research Distinguished scholars in diachronic semantics general linguistics classical philology philosophy of language anthropology and history offer in depth studies of language internal and external factors of meaning change This broad range of perspectives unprecedented in research publications of recent years is a pioneering attempt to mirror the multi faceted nature of language as a formal social cognitive cultural and historical entity The contributions each exploring the research issues methods and techniques of their particular field are directed towards a broader audience of interested readers thus enhancing interdisciplinary exchange *Experimental Perspectives on Presuppositions* Florian Schwarz, 2014-09-12 This volume brings together some of the most recent developments in the field of experimental pragmatics specifically empirical approaches to theoretical issues in presupposition theory It includes studies of the online processing of presupposed content investigations of the interpretive properties of presuppositions in various linguistic contexts comparative perspectives relative to other aspects of meaning such as asserted content and implicatures cross linguistic comparisons of presupposition triggers and perspectives from language acquisition Taken together these novel contributions provide a snapshot of state of the art developments in this area and will serve as a point of reference for numerous emerging avenues of future work It makes for an ideal set of readings for advanced university courses on experimental studies of meaning and is a must read for anyone interested in experimental research on meaning in natural language **Semantics - Typology, Diachrony and Processing** Klaus Heusinger, Claudia Maienborn, Paul Portner, 2019-02-19 Now available in paperback for the first time since its original publication the material in this book provides a broad accessible guide to semantic typology crosslinguistic semantics and diachronic semantics Coming from a world leading team of authors the book also deals with the concept of meaning in psycholinguistics and neurolinguistics and the understanding of semantics in computer science It is packed with highly cited expert guidance on the key topics in the field making it a bookshelf essential for linguists cognitive scientists philosophers and computer scientists working on natural language Logic and Engineering of Natural Language Semantics Daisuke Bekki, Koji Mineshima, Elin McCready, 2023-10-23 This volume LNCS 14213 constitutes the refereed proceedings of the 19th International Conference

The Semantics of Polysemy Nick Riemer, 2008-08-22 This book addressed primarily to students and researchers in semantics cognitive linguistics English and Australian languages is a comparative study of the polysemy patterns displayed by percussion impact hitting verbs in English and Warlpiri Pama Nyungan Central Australia The opening chapters develop a novel theoretical orientation for the study of polysemy via a close examination of two theoretical traditions under the broader cognitivist umbrella Langackerian and Lakovian Cognitive Semantics and Wierzbickian Natural Semantic Metalanguage Arguments are offered which problematize attempts in these traditions to ground the analysis of meaning either in cognitive or neurological reality or in the existence of universal synonymy relations within the lexicon Instead an interpretative rather than a scientific construal of linguistic theorizing is sketched in the context of a close examination of certain key issues in the contemporary study of polysemy such as sense individuation the role of reference in linguistic categorization and the demarcation between metaphor and metonymy The later chapters present a detailed typology of the polysemous senses of English and Warlpiri percussion impact or P I verbs based on a diachronically deep corpus of dictionary citations from Middle to contemporary English and on a large corpus of Warlpiri citations Limited to the operations of metaphor and of three categories of metonymy this typology posits just four types of basic relation between extended and core meanings As a result the phenomenon of polysemy and semantic extension emerges as amenable to strikingly concise description

Semantik / Semantics Arnim von Stechow, Dieter Wunderlich, 2008-07-14 During the past 20 years the investigation into meaning of natural languages has emerged into one of the most active disciplines in theoretical linguistics The different traditions of linguistics philosophy of language and philosophical logic converged in the paradigm of truth conditional semantics which now plays a central role in the cognitive sciences From empirical research in particular languages more principal questions arise of how the speaker succeeds in expressing particular types of meaning by use of formal combination of signs The theories developed to cope with the question assume that for a hearer the meaning of a complex expression must be computable and therefore modern theoretical semantics uses formal algebraic methods to construct the meaning compositionally in view of syntactic structure Furthermore meaning need to be anchored in the experience available to hearer In order to deal with this theoretical semantics extensively uses the concept of truth conditions which roughly explain how a world must be structured in order to be matched by certain linguistic expressions Semantic analyses are complemented by

context theory and the theory of speech acts Thus linguistic meaning must be related to human cognitive capacities and therefore theoretical semantics is tightly connected with philosophical logic as well as cognitive sciences in general The aim of this handbook is to represent the body of theoretical knowledge which has evolved in the international research of the last two decades Some of the theories can now be termed classical in that they belong to the commonly accepted base of theoretical semantics Other theories are still disputed and there are problems still to be solved as normal in a more developed science The authors who are leading experts in the field of semantics try to balance the accepted and the questionable results It goes without saying that each author holds a particular position in this respect Some articles are written in English some in German Since semantics is considered to be a subfield of linguistics the articles are arranged due to linguistic points of view In the first 5 chapters comprising 15 articles the common principles of semantics are presented ontological foundations of semantics composition of meaning problems of use context speech acts and lexical base of meaning The next 5 chapters comprising 25 articles are concerned with semantic phenomena theories and problems which are specific for a particular class of linguistic expressions These are arranged according to parts of speech nouns functional categories verbs adjectives and so on This division does not reflect a theoretical position by itself however it allows one to recognize problems connected with one another Some more general questions are discussed in more than one article in different perspective and vicinity The Handbook is complemented by a service article on formal methods in semantics followed by a comprehensive bibliography including about 1700 entries and both a subject and a name index This handbook is indispensable for all research in linguistics and neighboring disciplines philosophy of language cognitive sciences Some of the articles can serve as basic literature for classes of advanced students

The Semantics-Pragmatics Controversy Kristin

Börjesson, 2014-01-31 Currently there is a great number of approaches to the semantics pragmatics distinction on the market This book is unique in that it offers a comprehensive overview comparison and critical evaluation of these approaches Taking as a starting point the notorious difficulty of differentiating so called literal from non literal or figurative meaning it covers a wide range of the key current topics in semantics and pragmatics e g the saying meaning distinction minimalism vs contextualism unarticulated constituents indexicalism generalised conversational implicatures speech acts levels of meaning in interpretation the role of context in interpretation the nature of lexical meaning Notably rather than taking a solely theoretical perspective the book integrates psycho and neurolinguistic perspectives considering experimental results concerning the differences in processing of the various types of meaning covered In terms of topics covered and perspectives taken it is equally well suited for undergraduate as well as postgraduate students of linguistics and or philosophy of language
