The Secret of Sapiens Survival in the Modern World Ashthought,2021-08-19 Why Sapiens, the most respected living beings on earth, are most worried about their survival. How some people are becoming very rich and some people being very poor. Some poor seems to be very happy while some rich we find are very unhappy. To answer many life questions like these, we should know everything about life, about the human body, mind, requirements, emotions, love, relationship, resources, availability to achieve our requirements, how we achieve our requirements, building our life through cooperation like family, government and business, the reason for getting bored in family life, the inefficiency of government and the fall of the business, etc. Above all, we should know how to apply Albert Einstein's happiness law to our life to maximize our happiness. Sapiens Survival will tell you everything to survive human life and be happy always. *Don't Let It Fall* Arnold Marsden,2022-02-10 Dropped or falling objects are one of the leading sources of injuries and deaths in the workplace. Latent Semantic Mapping Jerome R. Bellegarda, 2022-05-31 Latent semantic mapping LSM is a generalization of latent semantic analysis LSA a paradigm originally developed to capture hidden word patterns in a text document corpus In information retrieval LSA enables retrieval on the basis of conceptual content instead of merely matching words between queries and documents It operates under the assumption that there is some latent semantic structure in the data which is partially obscured by the randomness of word choice with respect to retrieval Algebraic and/or statistical techniques are brought to bear to estimate this structure and get rid of the obscuring noise This results in a parsimonious continuous parameter description of words and documents which then replaces the original parameterization in indexing and retrieval This approach exhibits three main characteristics Discrete entities words and documents are mapped onto a continuous vector space This mapping is determined by global correlation patterns and Dimensionality reduction is an integral part of the process Such fairly generic properties are advantageous in a variety of different contexts which motivates a broader interpretation of the underlying paradigm The outcome LSM is a data driven framework for modeling meaningful global relationships implicit in large volumes of not necessarily textual data This monograph gives a general overview of the framework and underscores the multifaceted benefits it can bring to a number of problems in natural language understanding and spoken language processing It concludes with a discussion of the inherent tradeoffs associated with the approach and some perspectives on its general applicability to data driven information extraction Contents I Principles Introduction Latent Semantic Mapping LSM Feature Space Computational Effort Probabilistic Extensions II Applications Junk E mail Filtering Semantic Classification Language Modeling Pronunciation Modeling Speaker Verification TTS Unit Selection III Perspectives Discussion Conclusion Bibliography
