

el siglo del gen. biología molecular y genética

GINÉS MORATA

En el siglo *xx* la sociedad humana ha incorporado de forma masiva el desarrollo tecnológico. Durante gran parte del siglo las mayores contribuciones tecnológicas han venido de los derivados de las ciencias físicas: automóviles, teléfono, aviones, plásticos, ordenadores, etc. La introducción de estos factores ha modificado la sociedad y el comportamiento humano más que los propios acontecimientos políticos y sociales. Sin embargo, durante la segunda mitad del siglo *xx*, y especialmente en las últimas dos décadas, han aparecido unas tecnologías biológicas que poseen un enorme potencial médico y social. Estas nuevas tecnologías, extraordinariamente poderosas, son las derivadas del progreso explosivo de la biología molecular en la segunda mitad del siglo *xx*. Ofrecen una nueva imagen de la evolución de la vida en el planeta y están llamadas a revolucionar la propia estructura de la sociedad humana.

Quizá la persona que más lúcidamente ha profundizado en estas ideas ha sido Sydney Brenner, uno de los científicos más brillantes del siglo *xx* que pasará a la historia de la ciencia por sus enormes aportaciones a la biología molecular, ciencia que contribuyó decisivamente a crear. Afirma Brenner que la nueva biología nos acerca a la comprensión de nosotros mismos, al entendimiento de los humanos como organismos: «por primera vez podemos plantear el problema fundamental del hombre y empezar a comprender nuestra evolución, nuestra historia, nuestra cultura y nuestra biología como un todo».

En esta exposición tratarei de la historia de los acontecimientos científicos que han dado lugar a esta situación y especularé brevemente sobre las implicaciones que tienen estos nuevos descubrimientos en la sociedad del futuro, e incluso en nuestra propia comprensión de la naturaleza humana.

Los hitos del conocimiento biológico

A lo largo de la historia de la biología han existido tres grandes revoluciones, entendiendo el concepto revolución como la introducción de un descubrimiento que es importante por sí mismo y que además da lugar a un cambio radical en el enfoque que hasta ese momento se daba a la disciplina. No sólo se trata del significado de la nueva información, sino también del efecto que tiene en el enfoque general de disciplina.

La primera revolución se produjo en 1860 con las teorías evolucionistas de Darwin y Wallace, que defendían la universalidad del origen de los seres vivos. La segunda revolución fue el descubrimiento de la universalidad del mecanismo de la información biológica propuesta por Watson y Crick en 1953. La tercera revolución ha sido el descubrimiento de la universalidad del diseño animal y de los procesos básicos de regulación de las funciones biológicas. Esta última revolución ha sucedido entre los años 1985-2000 del pasado siglo *x*, a diferencia de las anteriores, es el resultado de las contribuciones de un grupo relativamente numeroso de investigadores. Estos tres hechos

Ciencia, Vida y Salud Félix M. Goñi (coord.), Bernat Soria, José M.^a Mato, Rafael Blesa, Arturo Rolla, Manuel González Barón, Santiago Dexeus, Carlos M.^a Romeo Casabona, Ciriaco Aguirre, Jaume Marrugat, 2007-01-01. En la sociedad del siglo XXI estamos asistiendo a una serie de cambios vertiginosos que afectan a nuestra vida cotidiana en lo que tiene de más próxima por ser absolutamente personal. Nos referimos a la salud en su sentido más amplio: esto es a la vida de las personas en todo lo que se refiere a su dimensión genética, biológica, física, etc. El Forum Deusto ha querido analizar estas cuestiones haciendo especial hincapié en los progresos de las investigaciones científicas y en sus repercusiones en la vida y en la salud de las personas.

Tratado de Psiquiatría del niño y adolescente Mardomingo Sanz, María Jesús, 2015-12-01. El Tratado de Psiquiatría del niño y del adolescente propone al lector una exposición panorámica y detallada de la Psiquiatría Infantil de nuestro tiempo, destacando los avances de la investigación de las últimas décadas y sus aplicaciones a la práctica clínica y las perspectivas para el futuro. Ofrece al médico y a todos aquellos que se relacionan con los trastornos psiquiátricos de los niños herramientas concretas de diagnóstico y tratamiento y sitúa al paciente y su realidad personal como centro y motor de las decisiones terapéuticas. Uno de sus desafíos es mostrar la complejidad del conocimiento médico y psiquiátrico de nuestro tiempo con un lenguaje claro y preciso. El libro se estructura en cinco partes. La primera plantea una visión histórica conceptual y metodológica de la psiquiatría infantil. La segunda se centra en los fundamentos neurobiológicos y dedica especial atención a los avances de la biología molecular a los primeros años de la vida del niño y a sus consecuencias en el futuro. La tercera parte se dedica a los principales trastornos psiquiátricos de la infancia y adolescencia y se describen los cambios y vicisitudes de los criterios diagnósticos. La cuarta aborda la evaluación y el diagnóstico desde la perspectiva psiquiátrica, psicológica y de las técnicas de imagen. En la quinta parte se expone el tratamiento farmacológico y en la urgencia, las psicoterapias y los principios éticos de la práctica psiquiátrica.

Un panorama general básico y didáctico sobre la singularidad genética y biológica de la especie humana. Tras la creación del universo con el big bang hace 13 700 millones de años, brota la vida en un planeta idóneo para su expansión y diversificación. En el libro se detallan los mecanismos de la evolución y de la aparición del Homo sapiens a partir de unos ancestros prehomínidos en el centro de África hasta su expansión por todo el mundo. Se describen los procesos de la hominización y humanización y las especiales características del ser humano. Se explica el significado del fenómeno humano y el por qué y el cómo del resurgir de una especie tan singular. La única que asciende al mundo de la racionalidad y que en consecuencia vive su vida de forma consciente, se comunica con sus congéneres, crea la cultura y domina su entorno con un sentido ético y de trascendencia.
