Longitude Uk Edition True Story Of A Lone Gen:

Scientifica Historica Brian Clegg, 2019-10-01 *Scientifica Historica* is an illustrated essay based review of those books that marked the development of science from ancient civilizations to the new millennium. The book is divided into five eras and explores the leading scientific pioneers, discoveries and books within them. Ancient World looks at the beginnings of language plus the first ever scientific documents produced and translated. Renaissance in Print explores the effects of the invention of the printing press and the exploration of the seas and skies. Modern Classical surveys the nineteenth century and the development of science as a profession. Post Classical dissects the twentieth century and the introduction of relativity, quantum theory and genetics. The Next Generation reviews the period from 1980 to the modern day showing how science has become accessible to the general public. Plus an introduction to the history and development of writing and books in general and a list of the 150 greatest science books published. From carvings and scrolls to glossy bound tomes, this book beautifully illustrates the evolution of scientific communication to the world. By recounting the history of science via its key works, those books written by the keenest minds our world has known, this book reflects the physical results of brilliant thought manifested in titles that literally changed the course of knowledge.

Tracks on the Ocean Sara Caputo, 2024-08-29. Longlisted for the 2025 BSHS Hughes Prize. Enthralling Philip Ball. Ingenious Sujit Sivasundaram. In *Tracks on the Ocean*, Sara Caputo tells how our journeys around the globe became fixed lines on maps and how journey lines themselves reshaped maps and the way that we view the world. From Captain Cook's route across the South Seas to the disorientating power of digital technology, the tracks we've left on the oceans trading, exploring and conquering are a hidden record of humanity's impact on the planet. Revealing their histories, Caputo uncovers a fascinating new history of maritime travel and modernity. Weaving human history, cartography, literature and climate science, *Tracks on the Ocean* reveals how on the path to discovery we have changed the world.

Fundamentals of Cartography (Second Revised and Enlarged Edition) R.P. Misra, 2014-01-01. The first edition of *Fundamentals of Cartography* was published in 1969 by Prasanga University of Mysore. It was reprinted by the Concept Publishing Company, New Delhi. While the book remained in currency, the cartographic processes changed drastically when information technology brought a sea of change in the sources of information, drafting of maps and printing processes. Drawing maps by hand became obsolete; surveying, whether ground or aerial, was no longer the only major source of information. In view of these changes, it became necessary to bring out a new edition. Realising that unless one knows directions, scales, projections, coordinates, ground and air surveys, one would fail to understand the proper use of modern information technology in the drawing of maps. Thus, the contents of the 1969 edition are retained and new chapters have been added to update the book. In Part II of the book, a chapter on Remote

Sensing and Satellite Imageries has been added and Part V contains chapters on Computer Aided Cartography Geographic Information System GIS Land Information System LIS and Global Positioning System GPS

Beyond the Line Georg Berkemer, Derek L. Elliot, Ute Fendler, Margret Frenz, Michael Mann, Ineke Phaf-Rheinberger, Sebastian R. Prange, Ana Sobral, Frank Schulze-Engler, 2014-04-23 The title of *Beyond the Line* refers to the imaginary Line drawn between North and South a division established by the Peace Treaty of Cateau Cambr sis in 1559 This is an early modern time and Eurocentric construction according to which the southern oceanic world has long been taken as symbol of expansionist philosophies and practices An obvious motivation for changing this Line division is the growing influence of the Global South in the contemporary economic and political setting However another motivation for changing opinions in regard to the Line is equally important We observe an emergent consciousness of the pivotal role of the oceanic world for human life This requires the reformulation of former views and raises numerous questions A diversity of connections comes to the mind which demands the composition of a catalogue of case studies with an oceanic horizon Through this operation different problems are being linked together Which problems encounter historians with their research on fishes in the archives How to trace records about pirates of non European descent in the Indian Ocean Which role play the Oceans as mediators for labor migrations not only of the Black Atlantic but also of people moving from Asia to Africa and vice versa What do we know about workers on the oceans and their routes When considering oceans as contact zones with which criteria can their influence in different literary texts be analyzed Is it possible to study nationalisms taking into account these transoceanic relationships And how do artists address these questions in their use of the media Against the background of this catalogue of oceanic questions old stories are told anew Sometimes their cultural stereotypes are recycled to criticize political and social situations Or in other cases they are adopted for elaborating alternative options In this sense the contributions concentrate on countries like India Kenya Angola or Brazil and cover different academic fields A variety of objects and situations are explored which have been and still are determinant for the construction of cultural narratives in view of the modified relationship with the geographically southern oceanic regions

Simulated Selves Andrew Spira, 2020-06-25 The notion of a personal self took centuries to evolve reaching the pinnacle of autonomy with Descartes I think therefore I am in the 17th century This personalisation of identity thrived for another hundred years before it began to be questioned subject to the emergence of broader more inclusive forms of agency *Simulated Selves The Undoing Personal Identity in the Modern World* addresses the constructed notion of personal identity in the West and how it has been eclipsed by the development of new technological social art historical and psychological infrastructures over the last two centuries While the provisional nature of the self sense has been increasingly accepted in recent years *Simulated Selves* addresses it in a new way not by challenging it directly but by observing changes to the environments and cultural conventions that have traditionally supported it By narrating both its dismantling and its incapacitation in this way it records its undoing Like *The Invention of*

the Self Personal Identity in the Age of Art to which it forms a companion volume Simulated Selves straddles cultural history and philosophy Firstly it identifies hitherto neglected forces that inform the course of cultural history Secondly it highlights how the self is not the self authenticating abstraction only accessible to introspection that it seems to be it is also a cultural and historical phenomenon Arguing that it is by engaging in cultural conventions that we subscribe to the process of identity formation the book also suggests that it is in these conventions that we see our self sense and its transience best reflected By examining the traces that the trajectory of the self sense has left in its environment Simulated Selves offers a radically new approach to the question of personal identity asking not only how and why is it under threat but also given that we understand the self sense to be a constructed phenomenon why do we cling to it

Newton's Forgotten Lunar Theory

Nick Kollerstrom,2000 Around the turn of the eighteenth century one of the most pressing practical scientific problems was accurate prediction of the moon s position Although Isaac Newton had hoped to solve this problem using the dynamic approach developed in Principia in 1687 he never succeeded in doing so Instead he reverted to an old fashioned kinematic theory using epicyclic motion A terse summary of the theory was published in 1702 by David Gregory as part of his Astronomiae elementa The present work includes Newton s full text with annotations explaining terms and relating the text to Kollerstrom s analysis In this detailed study Kollerstrom solves the enigma of Newton s forgotten lunar theory He ascertains for the first time ever just what Newton s theory did and did not achieve Amazon

book *Plants and Vegetation* integrates classical themes with the latest ideas models and data Keddy draws on extensive teaching experience to bring the field to life guiding students through essential concepts with numerous real world examples and full colour illustrations throughout The chapters begin by presenting the wider picture of the origin of plants and their impact on the Earth before exploring the search for global patterns in plants and vegetation Chapters on resources stress competition herbivory and mutualism explore causation and a concluding chapter on conservation addresses the concern that one third of all plant species are at risk of extinction The scope of this edition is broadened further by a new chapter on population ecology along with extensive examples including South African deserts the Guyana Highlands of South America Himalayan forests and arctic alpine environments

The Emergence of Geophysics: A Journey into the Twentieth Century R.J. Howarth, 2024-12-02 How did geophysics begin Who were the pioneers of this new science What instruments did they devise to measure the Earth related phenomena they were interested in This Memoir attempts to answer such questions in a well illustrated and largely non technical account The seventeenth century saw magnetism used as an aid to prospecting for iron ore in Sweden and Isaac Newton s derivation of the law of gravitational attraction A gradually increasing interest in physics of the Earth brought forth the new discipline of geophysics in the early nineteenth century and by the end of the following century airborne and satellite based investigations had become routine The *Emergence of Geophysics* explores this evolution in several parallel strands terrestrial magnetism and electricity gravity seismicity heat geodynamics and radioactivity broadly reflecting the timing of their introduction as tools aiding geophysical studies Biographical information is included for many of its practitioners and the book should be of interest to both geophysicists and to anyone interested in the history of Earth science

The Last Man Who Knew Everything Andrew Robinson, 2023-05-09 No one has given the polymath Thomas Young 1773 1829 the all round examination he so richly deserves until now Celebrated biographer Andrew Robinson portrays a man who solved mystery after mystery in the face of ridicule and rejection and never sought fame As a physicist Young challenged the theories of Isaac Newton and proved that light is a wave As a physician he showed how the eye focuses and proposed the three colour theory of vision only confirmed a century and a half later As an Egyptologist he made crucial contributions to deciphering the Rosetta Stone It is hard to grasp how much Young knew This biography is the fascinating story of a driven yet modest hero who cared less about what others thought of him than for the joys of an unbridled pursuit of knowledge with a new foreword by Martin Rees and a new postscript discussing polymathy in the two centuries since the time of Young It returns this neglected genius to his proper position in the pantheon of great scientific thinkers
