Longrange Charge transfer In Dna Ii:

Long-Range Charge Transfer in DNA II Gary B. Schuster, 2004-04-08 with contributions by numerous experts Charge and Exciton Transport through Molecular Wires Laurens D. A. Siebbeles, Ferdinand C. Grozema, 2011-07-18 As functional elements in optoelectronic devices approach the single molecule limit conducting organic molecular wires are the appropriate interconnects that enable transport of charges and charge like particles such as excitons within the device. Reproducible syntheses and a thorough understanding of the underlying principles are therefore indispensable for applications like even smaller transistors, molecular machines and light harvesting materials. Bringing together experiment and theory to enable applications in real life devices, this handbook and ready reference provides essential information on how to control and direct charge transport. Readers can therefore obtain a balanced view of charge and exciton transport covering characterization techniques such as spectroscopy and current measurements together with quantitative models. Researchers are thus able to improve the performance of newly developed devices while an additional overview of synthesis methods highlights ways of producing different organic wires. Written with the following market in mind: chemists, molecular physicists, materials scientists and electrical engineers Charge Transfer in DNA Hans-Achim Wagenknecht, 2006-05-12 The past few years have witnessed intense research in this fascinating field as well as many controversial discussions. Now the time is ripe for a comprehensive book covering not only theoretical aspects but also such mechanistic topics as principles and mechanisms of photoinduced charge injection, transport and trapping in DNA sequence dependent DNA dynamics, spectroscopic investigations of hole transport and much more. From the contents: Principles and Mechanisms of Photoinduced Charge Injection, Transport and Trapping in DNA Sequence Dependent DNA Dynamics; The Regulator of DNA Mediated Charge Transport; Excess Electron Transfer in DNA Probed with Flavin and Thymine Dimer Modified Oligonucleotides; Dynamics of Photoinitiated Hole and Electron Injection in Duplex DNA; Spectroscopic Investigation of Oxidative Hole Transfer via Adenine Hopping in DNA; Chemical Probing of Reductive Electron Transfer in DNA; Chemical Approach for Modulating Hole Transport in DNA; Spectroscopic Investigation of Charge Transfer in DNA; Spectroscopic Probing of Ultrafast Structural Relaxation and Electron Transfer Dynamics in DNA. Edited by Hans-Achim Wagenknecht and written by renowned international authors, this book provides an excellent overview with high quality contributions, making it a must have for everyone working in the field Bioinorganic Electrochemistry Ole Hammerich, J. Ulstrup, 2008 Interfacial electrochemistry of redox metalloproteins and DNA based molecules is presently moving towards new levels of structural and functional resolution. This is the result of powerful interdisciplinary efforts. Underlying fundamentals of biological electron and proton transfer are increasingly well understood although with outstanding unresolved issues. Comprehensive bioelectrochemical studies have mapped the working environments for bioelectrochemical electron transfer supported by the availability of mutant proteins and other powerful biotechnology. Introduction of surface spectroscopy, the scanning probe microscopies and

other solid state and surface physics methodology has finally offered exciting new fundamental and technological openings in interfacial bioelectrochemistry of both redox proteins and DNA based molecules Inorganic Bioelectrochemistry provides a thorough and didactic overview of state of the art bioelectrochemistry with prospects for forthcoming development The book is organized in eight chapters written by leading international experts and covers crucial relevant topics such as electron and proton transfer in metalloprotein systems electrochemistry and electrocatalysis of redox enzymes and electrochemistry of DNA based molecules A wide variety of readers will find this volume of great interest These include final year undergraduate and postgraduate students university lecturers in inorganic and physical chemistry as well as the biochemical and biological sciences and research staff in medical and biotechnological companies catalysis research and other industries **CRC**
