LOOKING AT INNOVATION: TWO APPROACHES TO EDUCATIONAL RESEARCH

P. Sheldrake and S. Berry

(N.F.E.R. Publishing Co. Ltd., 1975)

ROY WILKIE, *Strathclyde University*

There are at least three good reasons for reading this book. It is the first major report of research carried out by the Anabas Project, part of the Nuffield Foundation's Group for Research and Innovation in Higher Education. Here are two case studies of the introduction of new courses into traditional vocational disciplines: behavioural sciences introduced into the third year of the curriculum of the Edinburgh Medical School and a 'background' course for second-year students in the Department of Electronic and Electric Engineering at Birmingham.

As there seems to be a trend in British universities and polytechnics towards developing such "broadening" courses, the authors' findings are important:

"... two important criteria which the students applied emerge. In the first case, a background course might be acceptable if it could be shown to have relevance to the rest of the student's studies in the department, or his work when he left. Alternatively, students wanted courses that fitted their wider interests. This second criteria implied that students required greater freedom to choose subjects and, more important, that the courses be taught with the same expertise as the rest of their courses in the Department. In addition, there was also a vague call for relevance to the 'outside world' " (pp. 112-3)

"... the fate of 'background' courses is not just a matter of context and orientation, important though this is, but also is subject to the more general interests of the students and staff, and even their maturity and identification with the professional" (p. 127)

Secondly, this report should also be read by organization theorists concerned both with problems of change and with understanding the university as an organization. The authors point out that as well as questions of academic content and philosophy involved in the case studies, there was "a consideration of university politics and university finance". The analogy of political negotiation over conquered territory used to illuminate the behaviour of the working party at Edinburgh demonstrates that this consideration was a realistic one.

Thirdly, the research itself has methodological interest. The Edinburgh researcher deliberately intervened in the situation, the Birmingham one acted the more traditional role of trying to have little impact on the course and its development. The problems of involvement and detachment, prescription and analysis are raised here in their behaviour and their understanding that "there is no simple version of reality". It is a pity that only seven pages of a postscript relate to this fundamental issue. All in all, a stimulating little book.

Educational Innovation in Economics and Business

V L. Borghans,2000 The Information and Communication Technology revolution results in profound changes to the heart of business and economics Changes in the workplace new communication technology new organizational structures and new production technologies force business educators to renew their focus on the curricula of business schools There is no doubt these changes influence business education and instructional technology But change will go far beyond the mere introduction of technology in the classroom Alliances between the corporate world and business education are no longer fictitious but are necessary to establish stronger bonds between educational systems and the workplace The fifth volume in the series Educational Innovation in Economics and Business contains a unique selection of articles addressing various issues on how business education should adapt to changing needs of the corporate world It is meant for educators in corporate training centers and for teachers in further and higher education

Educational Research and Innovation Inspired by Technology, Driven by Pedagogy A Systemic Approach to Technology-Based School Innovations OECD,2010-10-04 This report highlights key issues to facilitate understanding of how a systemic approach to technology based school innovations can contribute to quality education for all while promoting a more equal and effective education system

Innovations in Educational Ethnography George Spindler,Lorie Hammond,2012-10-12 This volume focuses on and exemplifies how ethnography a research tool devoted to looking at human interaction as a cultural process rather than individual psychology can shed light on educational processes framed by the complex internationalized societies in which we live today Part I offers theoretical chapters about ethnography and examples of innovative ethnography from particular perspectives In Part II the emphasis is on the application of ethnographic approaches to educational settings Each contribution not only takes the reader on a thoughtful and enlightening journey but raises issues that are important to both educators and ethnographers including the relationship of researcher to subject the meaning of participant in participant observation and ways to give voice to disenfranchised players and on the complex ways in which all parties experience identities such as race in the modern world Innovations in Educational Ethnography Theory Methods and Results is a product of both continuity and change It presents current writings from mentors in the field of ethnography and education as well of the work of their

students and of educators engaged in cultural studies of their work In many ways it provides fresh new vistas on the old questions that have always guided ethnographic research and can be used as a survey both of what ethnography has been and what it is becoming This book is the work of many hands and provides excellent examples of trends in both basic and applied ethnography of education These two kinds of work augment and reinforce each other and also represent important current research directions in depth reflection on the process of ethnography itself and an application of its insights to teaching and learning in schools universities and communities No one philosophy guides the contributions to this volume nor were they chosen as exemplary of a particular approach yet foundational understandings and principles of ethnography shine through the work in both predictable and unexpected ways Educational Innovation in Economics and Business V Lex Borghans,Wim H. Gijssels, Richard G. Milder, John E. Stinson, 2005-12-17 The workplace is changing drastically these days As a consequence of the Information and Communication Technology ICT revolution new economic activities emerge the production process changes people use different communication tools and organizational structures are adjusted All these changes relate to the heart of business and economics and there is no doubt that they will also influence education in these areas Of course ICT provides new technologies to facilitate learning but a changing workplace also requires a renewed focus within the curriculum of economics and business education If ICT is leading to profound change in the workplace is innovation then only a matter of introducing more technology in education Unfortunately this is not necessarily true The translation of changes in the workplace into an improved curriculum requires serious analysis of the essence of the changes at the work place and the way technology may enable student learning For example relevant knowledge is changing faster and faster Does this mean that we have to adopt the curriculum faster and faster Perhaps not as students will have a labor market career of 30 or 40 years Focusing on today's knowledge even if it is very up to date loses more and more value if the life cycle of knowledge becomes shorter Increased speed of change also implies a decrease in the value of knowing all these things Pain education research: Advances, innovations, and challenges Ylisabyth S. Bradshaw, Mark I. Johnson, Scott Fishman, Judy Watt-Watson, 2024-04-16 *Innovative Approaches in Pedagogy for Higher Education Classrooms* Enakshi Sengupta, Patrick Blessinger, 2022-03-17 This book highlights case studies and innovative teaching methods used by academics across the globe It talks about how teaching staff should stimulate students active engagement in their own learning processes and discusses the approach of implementing a project based learning activity that integrates learning in an authentic manner **Handbook of Research on Innovations in Non-Traditional Educational Practices** Keengwe, Jared, 2020-12-11 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers factory workers or reliant on learning in a classroom there are bursts of promising practices that buck the norm by questioning the educational value of these traditions Though researchers have investigated the potential of students learning

in their own homes via personalized instruction delivered by computers rather than attending traditional institutions the status quo in education has remained stubbornly resistant to change Mixed reality simulations year round schooling grouping students by competencies instead of age and game based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era The Handbook of Research on Innovations in Non Traditional Educational Practices is a comprehensive reference source that examines various educational innovations how they have developed workarounds to navigate traditional systems and their potential to radically transform teaching and learning With each chapter highlighting a different educational innovation such as experiential learning game based learning online learning and inquiry based learning and their applications in all levels of education this book explores the issues and challenges these educational innovations face as well as their impact It is intended for academicians professionals administrators and researchers in education and specifically benefits academic deans vice presidents of academic affairs graduate students faculty technology leaders directors of teaching and learning centers curriculum and instructional designers policymakers principals and superintendents and teachers interested in educational change
