Memory And Architecture:

Memory and Architecture Eleni Bastéa, 2004 An international study of cultural relationships with built environments

Body, Memory, and Architecture Kent C. Bloomer, Charles Willard Moore, Robert J. Yudell, Buzz Yudell, 1977-01-01

Traces the significance of the human body in architecture from its early place as the divine organizing principle to its present near elimination

The Destruction of Memory Robert Bevan, 2007-04-20 Crumbled shells of mosques in Iraq the bombing of British cathedrals in World War II the fall of the World Trade Center towers on September 11 when architectural totems such as these are destroyed by conflicts and the ravages of war more than mere buildings are at stake The Destruction of Memory reveals the extent to which a nation weds itself to its landscape Robert Bevan argues that such destruction not only shatters a nation's culture and morale but is also a deliberate act of eradicating a culture's memory and ultimately its existence Bevan combs through world history to highlight a range of wars and conflicts in which the destruction of architecture was pivotal From Cortez's razing of Aztec cities to the carpet bombings of Dresden and Tokyo in World War II to the war in the former Yugoslavia The Destruction of Memory exposes the cultural war that rages behind architectural annihilation revealing that in this subliminal assault lies the complex aim of exterminating a people He provocatively argues for the fatally intertwined experience of genocide and cultural genocide ultimately proposing the elevation of cultural genocide to a crime punishable by international law In an age in which Frank Gehry I M Pei and Frank Lloyd Wright are revered and yet museums and temples of priceless value are destroyed in wars around the world Bevan challenges the notion of collateral damage arguing that it is in fact a deliberate act of war

Designing Memory Sabina Tanović, 2019-11-28 This innovative study of memorial architecture investigates how design can translate memories of human loss into tangible structures creating spaces for remembering Using approaches from history psychology anthropology and sociology Sabina Tanović explores purposes behind creating contemporary memorials in a given location their translation into architectural concepts their materialisation in the face of social and political challenges and their influence on the transmission of memory Covering the period from the First World War to the present she looks at memorials such as the Holocaust museums in Mechelen and Drancy as well as memorials for the victims of terrorist attacks to unravel the private and public role of memorial architecture and the possibilities of architecture as a form of agency in remembering and dealing with a difficult past The result is a distinctive contribution to the literature on history and memory and on architecture as a link to the past

Spatial Recall Marc Treib, 2009 Essays from internationally renowned contributors give a variety of perspectives of the role of memory in the built environment how we have read it in the past and how we can create it in the future Essays range from broad topics of message and audience to specific ones of landscape production

The Destruction of Memory

Robert Bevan, 2016-02-15 Crumbled shells of mosques in Iraq the fall of the World Trade Center towers on September 11 when architectural totems such as these are destroyed by conflicts and the ravages of war more than mere buildings are at

stake The Destruction of Memory now available in this accessible pocket edition reveals the extent to which a nation weds itself to its landscape Robert Bevan argues that such destruction not only shatters a nation's culture and morale but is also a deliberate act of eradicating a culture's memory and ultimately its existence Bevan combs through world history to highlight a range of wars and conflicts in which the destruction of architecture was pivotal From Cortez's razing of Aztec cities to the carpet bombings of Dresden and Tokyo in World War II to the war in the former Yugoslavia The Destruction of Memory exposes the cultural war that rages behind architectural annihilation revealing that in this subliminal assault lies the complex aim of exterminating a people He provocatively argues for the fatally intertwined experience of genocide and cultural genocide ultimately proposing the elevation of cultural genocide from collateral damage to a crime punishable by international law

Body, Memory, and Architecture Kent C. Bloomer, 1979 **Munich and Memory** Gavriel David Rosenfeld, 2000 In the ever growing scholarship on German memory after World War II there is nothing comparable to Rosenfeld's impressively researched account of one city's attempt to master the past through reconstruction Rudy Koshar author of Germany's Transient Pasts In his fascinating history of Munich's postwar architectural reconstruction and social de Nazification Gavriel Rosenfeld shows how closely linked the clearing of both rubble and rabble from the German landscape were and how closely Germany's postwar architectural landscape came to resemble its new democratic mindset James E Young author of The Texture of Memory **Distributed Shared Memory** Jelica Protic, Milo Tomasevic, Veljko Milutinović, 1997-08-10 The papers present in this text survey both distributed shared memory DSM efforts and commercial DSM systems The book discusses relevant issues that make the concept of DSM one of the most attractive approaches for building large scale high performance multiprocessor systems The authors provide a general introduction to the DSM field as well as a broad survey of the basic DSM concepts mechanisms design issues and systems The book concentrates on basic DSM algorithms their enhancements and their performance evaluation In addition it details implementations that employ DSM solutions at the software and the hardware level This guide is a research and development reference that provides state of the art information that will be useful to architects designers and programmers of DSM systems **Memory Architecture Exploration for Programmable Embedded Systems** Peter Grun, Nikil D. Dutt, Alexandru Nicolau, 2007-05-08 Memory Architecture Exploration for Programmable Embedded Systems addresses efficient exploration of alternative memory architectures assisted by a compiler in the loop that allows effective matching of the target application to the processor memory architecture This new approach for memory architecture exploration replaces the traditional black box view of the memory system and allows for aggressive co optimization of the programmable processor together with a customized memory system The book concludes with a set of experiments demonstrating the utility of this exploration approach The authors perform architecture and compiler exploration for a set of large real life benchmarks uncovering promising memory configurations from different perspectives such as cost performance and power Architecture in

Handbook of Parallel Computing and Statistics Erricos John Kontoghiorghes, 2005-12-21 Technological improvements continue to push back the frontier of processor speed in modern computers Unfortunately the computational intensity demanded by modern research problems grows even faster Parallel computing has emerged as the most successful bridge to this computational gap and many popular solutions have emerged based on its concepts

Handbook of Parallel Computing Sanguthevar Rajasekaran, John Reif, 2007-12-20 The ability of parallel computing to process large data sets and handle time consuming operations has resulted in unprecedented advances in biological and scientific computing modeling and simulations Exploring these recent developments the Handbook of Parallel Computing Models Algorithms and Applications provides comprehensive coverage on a

Emerging Memory and Computing Devices in the Era of Intelligent Machines Pedram Khalili Amiri, 2020-04-16 Computing systems are undergoing a transformation from logic centric towards memory centric architectures where overall performance and energy efficiency at the system level are determined by the density performance functionality and efficiency of the memory rather than the logic sub system This is driven by the requirements of data intensive applications in artificial intelligence autonomous systems and edge computing We are at an exciting time in the semiconductor industry where several innovative device and technology concepts are being developed to respond to these demands and capture shares of the fast growing market for AI related hardware This special issue is devoted to highlighting discussing and presenting the latest advancements in this area drawing on the best work on emerging memory devices including magnetic resistive phase change and other types of memory The special issue is interested in work that presents concepts ideas and recent progress ranging from materials to memory devices physics of switching mechanisms circuits and system applications as well as progress in modeling and design tools Contributions that bridge across several of these layers are especially encouraged

On-Chip Communication Architectures Sudeep Pasricha, Nikil Dutt, 2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era

of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures covering a wide range of topics relevant to this area spanning the past several years and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication architectures over the next several years

Computer Memory and Data Storage Azam Seyedi, 2024-01-10 Computer Memory and Data Storage presents a comprehensive exploration of the intricacies of memory design delving into the challenges and advanced techniques involved in optimizing power consumption performance reliability and data integrity The chapters provide a complete understanding of modern memory technologies ranging from radiation hardened memory for space applications to diverse memory designs and their trade offs

Still Image Compression on Parallel Computer Architectures Savitri Bevinakoppa, 2012-12-06 Still Image Compression on Parallel Computer Architectures investigates the application of parallel processing techniques to digital image compression Digital image compression is used to reduce the number of bits required to store an image in computer memory and or transmit it over a communication link Over the past decade advancements in technology have spawned many applications of digital imaging such as photo videotex desktop publishing graphics arts color facsimile newspaper wire phototransmission and medical imaging For many other contemporary applications such as distributed multimedia systems rapid transmission of images is necessary Dollar cost as well as time cost of transmission and storage tend to be directly proportional to the volume of data Therefore application of digital image compression techniques becomes necessary to minimize costs A number of digital image compression algorithms have been developed and standardized With the success of these algorithms research effort is now directed towards improving implementation techniques The Joint Photographic Experts Group JPEG and Motion Photographic Experts Group MPEG are international organizations which have developed digital image compression standards Hardware VLSI chips which implement the JPEG image compression algorithm are available Such hardware is specific to image compression only and cannot be used for other image processing applications A flexible means of implementing digital image compression algorithms is still required

An obvious method of processing different imaging applications on general purpose hardware platforms is to develop software implementations JPEG uses an 8 8 block of image samples as the basic element for compression These blocks are processed sequentially There is always the possibility of having similar blocks in a given image If similar blocks in an image are located then repeated compression of these blocks is not necessary By locating similar blocks in the image the speed of compression can be increased and the size of the compressed image can be reduced Based on this concept an enhancement to the JPEG algorithm is proposed called Block Comparator Technique BCT Still Image Compression on Parallel Computer Architectures is designed for advanced students and practitioners of computer science This comprehensive reference provides a foundation for understanding digital image compression techniques and parallel computer architectures

Memory Allocation Problems in Embedded Systems Maria Soto,Marc Sevaux,André Rossi,Johann Laurent,2013-01-24
Memory Allocation Problems in Embedded Systems Optimization Methods Embedded systems are everywhere in contemporary life and are supposed to make our lives more comfortable In industry embedded systems are used to manage and control complex systems e g nuclear power plants telecommunications and flight control and they are also taking an important place in our daily activities e g smartphones security alarms and traffic lights In the design of embedded systems memory allocation and data assignment are among the main challenges that electronic designers have to face In fact they impact heavily on the main cost metrics power consumption performance and area in electronic devices Thus designers of embedded systems have to pay careful attention in order to minimize memory requirements thus improving memory throughput and limiting the power consumption by the system s memory Electronic designers attempt to minimize memory requirements with the aim of lowering the overall system costs A state of the art of optimization techniques for memory management and data assignment is presented in this book *Custom Memory Management Methodology* Francky Catthoor,Sven Wuytack,G.E. de Greef,Florin Banica,Lode Nachtergaele,Arnout Vandecappelle,2013-03-09 The main intention of this book is to give an impression of the state of the art in system level memory management data transfer and storage related issues for complex data dominated real time signal and data processing applications The material is based on research at IMEC in this area in the period 1989 1997 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style and a systematic methodology to make the exploration and optimization of such systems feasible Our approach is also very heavily application driven which is illustrated by several realistic demonstrators partly used as red thread examples in the book Moreover the book addresses only the steps above the traditional high level synthesis scheduling and allocation or compilation traditional or ILP oriented tasks The latter are mainly focussed on scalar or scalar stream operations and data where the internal structure of the complex data types is not exploited in contrast to the approaches discussed here The proposed methodologies are largely independent of the level of programmability in the data path and controller so they are valuable for the realisation of both

hardware and software systems Our target domain consists of signal and data processing systems which deal with large amounts of data
