Tacconi, 2012-12-06 This paper describes the results of current research at DREA in which techniques of optimum array processing are being applied to active sonar We are presenting these results at the Advanced Study Institute in order to illustrate some actual applications for such processing and to point out some of the practical considerations which arise in real systems In particular the paper concerns the problems which arise when the individual sensor elements have a complicated directivity pattern themselves This is a common phenomenon in active systems where the receiving sensors are complex resonant structures and are housed in a dome or towed body presenting various baffling

and diffraction effects Most treatments of array processing consider ideal elements which have well behaved directivity properties and are transparent to the field The results of this paper show that where these properties are not met careful in situ array measurements are required and even with such measurements practical array gains may not be as good as predictions based on ideal sensors Digital Information Processing and Communications, Part II Vaclav Snasael, Jan Platos, Eyas El-Qawasmeh, 2011-06-28 This two volume set CCIS 188 and CCIS 189 constitutes the refereed proceedings of the International Conference on Digital Information Processing and Communications ICDIPC 2011 held in Ostrava Czech Republic in July 2011 The 91 revised full papers of both volumes presented together with 4 invited talks were carefully reviewed and selected from 235 submissions The papers are organized in topical sections on network security Web applications data mining neural networks distributed and parallel processing biometrics technologies e learning information ethics image processing information and data management software engineering data compression networks computer security hardware and systems multimedia ad hoc network artificial intelligence signal processing cloud computing forensics security software and systems mobile networking and some miscellaneous topics in digital information and communications
