Organization of Programming Languages Bernd Teufel, 1991-09-23
Beside the computers itself programming languages are the most important tools of a computer scientist because they allow the formulation of algorithms in a way that a computer can perform the desired actions Without the availability of high level languages it would simply be impossible to solve complex problems by using computers Therefore high level programming languages form a central topic in Computer Science It should be a must for every student of Computer Science to take a course on the organization and structure of programming languages since the knowledge about the design of the various programming languages as well as the understanding of certain compilation techniques can support the decision to choose the right language for a particular problem or application This book is about high level programming languages It deals with all the major aspects of programming languages including a lot of examples and exercises Therefore the book does not give an detailed introduction to a certain programming language for this it is referred to the original language reports but it explains the most important features of certain programming languages using those programming languages to exemplify the problems The book was outlined for a one session course on programming languages It can be used both as a teacher's reference as well as a student text book

The World of Programming Languages Michael Marcotty, Henry Ledgard, 2012-12-06 The earth viewed through the window of an airplane shows a regularity and repetition of features for example hills valleys rivers lakes and forests Nevertheless there is great local variation Vermont does not look like Utah Similarly if we rise above the details of a few programming languages we can discern features that are common to many languages This is the programming language landscape the main features include variables types control structures and input output Again there is local variation Pascal does not look like Basic This work is a broad and comprehensive discussion of the principal features of the major programming languages A Study of Concepts The text surveys the landscape of programming languages and its features Each chapter concentrates on a single language concept A simple model of the feature expressed as a mini language is presented This allows us to study an issue in depth and relative isolation Each chapter concludes with a discussion of the way in which the concept is incorporated into some well known languages This permits a reasonably complete coverage of language issues

Programming Languages and Systems S. Doaitse Swierstra, 2003-07-31 This is the second time that of ESOP has formed part of the ETAPS cluster of conferences workshops working group meetings and other associated activities One of the results of colocating so many conferences is a reduction in the number of possibilities to submit a paper to a European conference and the increased competition between conferences that occurs when boundaries between individual conferences have not yet become well established This may have been the reason for the fact that only 44 submission were received this year On the other hand we feel that the average quality of submissions has gone up and thus the program committee was able to select 18 good papers only one less than the year before The program committee did not meet physically and all discussion was done using a Web driven data base system Despite some mixed feelings there is an overall tendency to appreciate the extra time available for giving papers a second look and really going into comments made by other program committee members I want to thank my
