Organotitanium Reagents In Organic Synthesis:

Organotitanium Reagents in Organic Synthesis Manfred T. Reetz, 2013-11-11 Titanium has been used to perform many kinds of reactions in organic and inorganic chemistry The present book is concerned primarily with a new development in titanium chemistry which is useful in organic synthesis In 1979 80 it was discovered that the titanation of classical carbanions using $C1TiX$ leads to species with reduced basicity and reactivity This increases 3 chemo regio and stereo selectivity in reactions with organic compounds such as aldehydes ketones and alkyl halides Many new examples have been reported in recent times Since the nature of the ligand X at titanium can be widely varied the electronic and steric nature of the reagents is easily controlled This helps in predicting the stereochemical outcome of many of the C C bond forming reactions but the trial and error method is still necessary in other cases One of the ultimate objectives of chemistry is to understand correlations between structure and reactivity Although this goal has not been reached in the area of organotitanium chemistry appreciable progress has been made A great deal of physical and computational data of organotitanium compounds described in the current and older literature e g Ziegler Natta type catalysts has been reported by polymer inorganic and theoretical chemists It is summarized in Chapter 2 of this book because some aspects are useful in understanding reactivity and selectivity of organo titanium compounds in organic synthesis as described in the chapters which follow

General and Synthetic Methods G Pattenden, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of

chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
