

Evolution of Intelligence

A new framework for modeling complex adaptive systems called Active Inference could enable super intelligence within the next decade.

1 What is Active Inference?

A highly efficient model for cognition where beliefs are continuously updated to reduce uncertainty and increase the accuracy of predictions about how the world works.

Current state-of-the-art AI is impeded by ethical and legal issues, but with Active Inference, it is possible to follow an agent's reasoning and decision making processes, fostering greater acceptance and trust.

Origin And Evolution Of Intelligence:

The Origin and Evolution of Intelligence Arnold B. Scheibel, J. William Schopf, 1997 What is intelligence From where did it come Will the human brain grow and adapt to the ever changing world These and many other questions are addressed in *The Origin and Evolution of Intelligence* This volume is composed of a series of articles presented on the origin and evolution of intelligence in March 1995 at the Eighth Annual Symposium of the UCLA Center for the Study of the Origin and Evolution of Life CSEOL The six authors of the contributions to this volume discuss in detail an enormous span of invertebrate and vertebrate life forms and wrestle with a vast array of problems ranging from direction finding in ants and birds to sociopolitical communication in monkeys symbol manipulation in apes and language use in humans All these phenomena may be grouped under the general term intelligence the unifying theme of the volume [Origins of Intelligence](#)

Sue Taylor Parker, Michael L. McKinney, 2021-04-27 A look at the origins of cognitive abilities in primate species Since Darwin's time comparative psychologists have searched for a good way to compare cognition in humans and nonhuman primates In *Origins of Intelligence* Sue Parker and Michael McKinney offer such a framework and make a strong case for using human development theory both Piagetian and neo Piagetian to study the evolution of intelligence across primate species Their approach is comprehensive covering a broad range of social symbolic physical and logical domains which fall under the all encompassing and much debated term intelligence A widely held theory among developmental psychologists and social and biological anthropologists is that cognitive evolution in humans has occurred through juvenilization the gradual accentuation and lengthening of childhood in the evolutionary process In this work however Parker and McKinney argue instead that new stages were added at the end of cognitive development in our hominid ancestors coining the term adultification by terminal extension to explain this process Drawing evidence from scores of studies on monkeys great apes and human children this book provides unique insights into ontogenetic constraints that have interacted with selective forces to shape the evolution of cognitive development in our lineage The authors elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas Jonas Langer *Human Development* A handy source of information on comparative cognitive abilities related to life history and brain variables James Anderson *Journal of the Royal Anthropological Institute*

Homeland Security and Intelligence Keith Gregory Logan, 2017-11-16 Now updated and expanded for its second edition this book investigates the role intelligence plays in maintaining homeland security and emphasizes that effective intelligence collection and analysis are central to reliable homeland security The first edition of *Homeland Security and Intelligence* was the go to text for a comprehensive and clear introduction to U S intelligence and homeland security issues covering all major aspects including analysis military intelligence terrorism emergency response oversight and domestic intelligence This fully revised and updated edition adds eight new chapters to

expand the coverage to topics such as recent developments in cyber security drones lone wolf radicalization whistleblowers the U S Coast Guard border security private security firms and the role of first responders in homeland security This volume offers contributions from a range of scholars and professionals from organizations such as the Department of Homeland Security the Center for Homeland Defense and Security at the Naval Postgraduate School the National Intelligence University the Air Force Academy and the Counterterrorism Division at the Federal Law Enforcement Training Center This breadth of unique and informed perspectives brings a broad range of experience to the topic enabling readers to gain a critical understanding of the intelligence process as a whole and to grasp what needs to happen to strengthen these various systems The book presents a brief history of intelligence in the United States that addresses past and current structures of the intelligence community Recent efforts to improve information sharing among the federal state local and private sectors are considered and the critical concern regarding whether the intelligence community is working as intended and whether there is an effective system of checks and balance to govern it is raised The book concludes by identifying the issues that should be addressed in order to better safeguard our nation in the future

Sharov, George E. Mikhailovsky, 2024-02-28 Pathways to the Origin and Evolution of Meanings in the Universe The book explains why meaning is a part of the universe populated by life and how organisms generate meanings and then use them for creative transformation of the environment and themselves This book focuses on interdisciplinary research at the intersection of biology semiotics philosophy ethology information theory and the theory of evolution Such a broad approach provides a rich context for the study of organisms and other semiotic agents in their environments This methodology can be applied to robotics and artificial intelligence for developing robust adaptable learning devices In this book leading interdisciplinary scholars reveal their vision on how to integrate natural sciences with semiotics a theory of meaning making and signification Developments in biology indicate that the capacity to create and understand signs is not limited to humans or vertebrate animals but exists in all living organisms the fact that inspired the integration of biology and semiotics into biosemiotics The authors discuss the nature of semiotic agents organisms and other autonomous goal directed units meaning signs information memory evolution and consciousness Also discussed are issues including the origin of life potential meaning and its actualization top down causality in physics and biology capacity of organisms to encode their functions the strategy of organisms to combine homeostasis with direct adaptation to new life cycle phases or new environments multi level memory systems increase of freedom via enabling constraints creative modeling in evolution and learning communication in animals and humans the origin and function of language and the distribution and transfer of life in space This is the first book on biosemiotics in its global conceptual and spatial scope Biosemiotics is presented using the language of natural sciences which supports the scientific grounding of semiotic terms Finally the cosmic dimension of life and

Byrne,1995 This text describes how human ancestors reached the point in cognitive evolution from which the evolution of modern humans was possible Rather than speculating about the mental abilities of fossil hominids on the basis of modern human psychology the author explores earlier phases of evolution with the more solid and testable evidence of human ancestry that is still alive modern primates and other animals **Evolutionary Intelligence** Rolf W. Frohlich,2009-04 Human nature holds the intelligence of life It provides a psychology that is much stronger more effective and more reliable than the psychology society teaches us This psychology taps into the evolutionary survival experience of our species which occupied most of human history It was the period when the species evolved and our ancestor survived as a hunter and gatherer More than 99% of human history is encoded in the DNA of our genes and lastingly etched into the human psyche Our natural psychology the human psyche is the result of evolutionary adaptation The psyche provides the genetic capacity for behavioral mental and spiritual adaptation It supports the gratification of our needs And it contains the blueprint of human life The book is about human nature and human survival Human nature that is the human psyche has survival value The book introduces a metapsychology that refers to the Jungian archetypes and the survival capabilities inherent in the psyche Like all living organisms and forms of life we possess an innate capacity for survival By awakening this evolutionary intelligence we gain access to the primordial power and wisdom of the archetypal psyche This innate psychology transcends the cultural conditioning that has shaped us all and erects an entirely different reference system making us look at life in a new way We live in a world that reflects human nature and we are well equipped to survive in it Beyond that there is also something in us that resonates with a larger context Our psychological constitution relates us to the outer realities of nature and cosmos It is in this sense that we partake in the evolution of life on this planet and in the larger design of a cosmic universe This primary psyche is shared by all humanity as part of a common biological and psychological history **The Evolution of animal intelligence** Samuel Jackson Holmes,1911 Handbook of Intelligence Sam Goldstein,Dana Princiotto,Jack A. Naglieri,2014-12-08 Numerous functions cognitive skills and behaviors are associated with intelligence yet decades of research has yielded little consensus on its definition Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with and survive in challenging new environments The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past It is the first full length volume to place intelligence in an evolutionary cultural framework tracing the development of the human mind exploring differences between humans and other primates and addressing human thinking and reasoning about its own intelligence and its uses The works of pioneering thinkers from Plato to Darwin Binet to Piaget Luria to Wechsler are

referenced to illustrate major events in the evolution of theories of intelligence leading to the current era of multiple intelligences and special education programs In addition it examines evolutionary concepts in areas as diverse as creativity culture neurocognition emotional intelligence and assessment Featured topics include The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of thinking Intelligence as a malleable construct From traditional IQ to second generation intelligence tests The evolution of intelligence including implications for educational programming and policy The Handbook of Intelligence is an essential resource for researchers graduate students clinicians and professionals in developmental psychology assessment testing and evaluation language philosophy personality and social psychology sociology and developmental biology **Handbook of Astrobiology** Vera M. Kerr, 2009 What does the place of information within the cosmos have to do with the life of any one person or with the nature of right and wrong It changes everything Information can be viewed as nothing more than an ephemeral artefact of matter energy space and time Or it can be viewed as a component of the universe every bit as real and consequential as the others This book shows not only that information is real in its own right but that the intelligence found in people would not have come into existence if it were not The most powerful tool and weapon of humans is the information system their minds together comprise Individuals in all their variety are the way they are because that is the way that together they are most intelligent From the evolutionary mechanism which generated human intelligence to the affairs of people today the driving force has always been the role of information in individual lives The result of their decisions through the distant past has been a kind of intelligence new in the universe People together form a functional mental system that is of a higher order of complexity and intelligence than any individual mind could be Individual minds are designed not to survive alone in a wilderness but to complement the human information system as a whole To make the system function human intelligence and morality necessarily evolved together People can think together only if they get along The basic outlines of morality are as fixed and timeless and as rooted in human evolution

as the intelligence it evolved with Each is both cause and product of the other The intelligence of the human information system as a whole is the central principle of human life Acknowledging the reality of information changes forever the divide between secular and religious outlooks Religions envision the information world by belief in an invisible network of connections between people and the world around them But these connections exist in hard reality because the existence of information is just as real and provable as the existence of rocks Dividing reality by believing that physical things are real and information is not trivialises the most important aspect of human existence Once the illusion that information is not real is given up the basic relationships of life re assume the kinds of firm definitions that they have always been given by religions To live in harmony with the reality of information each person must find a way to recognise that their own thoughts and feelings which consist of information are just as real as any objects they think about This has always been the essential doorway to reality opening to a world of enormous intelligence love and beauty Reasons to care about other people appear clearly and simply as features of the way things are endowing every life with a sense of purpose as an indispensable element of the human information system Together humans exist to wonder and speculate create and explore seek truth and solve the riddles of the universe

The Evolution of Thought Anne E. Russon, David R. Begun, 2007-07-23 Research on the evolution of higher intelligence rarely combines data from fields as diverse as paleontology and psychology In this volume we seek to do just that synthesizing the approaches of hominoid cognition psychology language studies ecology evolution paleoecology and systematics toward an understanding of great ape intelligence Leading scholars from all these fields have been asked to evaluate the manner in which each of their topics of research inform our understanding of the evolution of intelligence in great apes and humans The ideas thus assembled represent a comprehensive survey of the various causes and consequences of cognitive evolution in great apes The Evolution of Thought will therefore be an essential reference for graduate students and researchers in evolutionary psychology paleoanthropology and primatology

Evolution of Nervous Systems Georg F. Striedter, Theodore H. Bullock, Todd M. Preuss, John Rubenstein, Leah A. Krubitzer, 2016-11-23 Evolution of Nervous Systems Second Edition Four Volume Set is a unique major reference which offers the gold standard for those interested both in evolution and nervous systems All biology only makes sense when seen in the light of evolution and this is especially true for the nervous system All animals have nervous systems that mediate their behaviors many of them species specific yet these nervous systems all evolved from the simple nervous system of a common ancestor To understand these nervous systems we need to know how they vary and how this variation emerged in evolution In the first edition of this important reference work over 100 distinguished neuroscientists assembled the current state of the art knowledge on how nervous systems have evolved throughout the animal kingdom This second edition remains rich in detail and broad in scope outlining the changes in brain and nervous system organization that occurred from the first invertebrates and vertebrates to present day fishes reptiles birds mammals and especially primates including humans The book also includes wholly new

content fully updating the chapters in the previous edition and offering brand new content on current developments in the field Each of the volumes has been carefully restructured to offer expanded coverage of non mammalian taxa mammals primates and the human nervous system The basic principles of brain evolution are discussed as are mechanisms of change The reader can select from chapters on highly specific topics or those that provide an overview of current thinking and approaches making this an indispensable work for students and researchers alike Presents a broad range of topics ranging from genetic control of development in invertebrates to human cognition offering a one stop resource for the evolution of nervous systems throughout the animal kingdom Incorporates the expertise of over 100 outstanding investigators who provide their conclusions in the context of the latest experimental results Presents areas of disagreement and consensus views that provide a holistic view of the subjects under discussion

Origin of Intelligence in the Child Jean Piaget, 2013-07-04 First published in 1997 This is Volume III of selected works of Jean Piaget which explores his concepts on the origins of intelligence in children The theses developed in this volume concern in particular the formation of the sensorimotor schemata and the mechanism of mental assimilation

Evolutionary Intelligence S. Sumathi, T. Hamsapriya, P. Surekha, 2008-05-15 This book provides a highly accessible introduction to evolutionary computation It details basic concepts highlights several applications of evolutionary computation and includes solved problems using MATLAB software and C C This book also outlines some ideas on when genetic algorithms and genetic programming should be used The most difficult part of using a genetic algorithm is how to encode the population and the author discusses various ways to do this

Computational Intelligence in Business and Economics Anna M. Gil-Lafuente, Jos M. Merigó, 2010 This book provides some of the most recent developments in Computational Intelligence applied to business and economics presented at the MS 10 International Conference Barcelona 15 17 July 2010 It presents several new theoretical advancements and a wide range of applications in different business and economic areas including accounting finance management marketing sports tourism economics and politics and also some applications related with engineering and modeling and simulation This book is very useful for researchers and graduate students interested in pursuing research in business and economics with an orientation to modern techniques for dealing with uncertainty such as those related with modeling and simulation and computational intelligence

Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem

solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers
