Origins of Molecular Biology, 2014 *Origins of Molecular Biology* Agnès Ullmann, 2003 *Origins of Molecular Biology* Andre Lwoff, 2012-12-02 *Origins of Molecular Biology A Tribute to Jacques Monod* consists of contributions of scientists narrating their experiences with Jacques Monod Significantly the history of various discoveries Jacques Monod made is unfolded This book pictures Jacques Monod through the eyes of his technician secretary peers friends and even opponents It notes that the depiction of the same discovery may be told differently by different scientists who worked at the same time in the same laboratory The personality of the contributor sometimes influences the narration Through this book one can learn how a great scientist receives discusses rejects accepts assimilates and creates ideas how ideas are turned into experiments how experimental results are interpreted and how concepts are born In a word it tells how science is constructed **Origins of Molecular Biology** Agnès Ullmann, 2003 *Origins of Molecular Biology* Jacques Monod, 1979 *Origins of Molecular Biology* **Genesis of the Salk Institute** Suzanne Bourgeois, 2013-09-20 This work is a personal account of the origins and early years of the Salk Institute for Biological Studies Bourgeois crafts an engaging study that draws on her involvement with the Institute and on related archives interviews and informal conversations The volume discusses the people who founded the Institute and built a home for renowned research leading scientists of the time as well as non scientists of stature in finance politics philanthropy publishing and the humanities The events that brought people together the historic backdrop in which they worked their personalities their courage and their visions their clash of egos and their personal vanities are woven together in a rich engaging narrative about the founding of a world premier research institution **Life in Science** Diego Breviario, Jack A. Tuszyński, 2023-03-01 This book is a collection of stories reflections and advice written by proficient scientists They address the question of what doing science means to them and describe attitudes and working practices that have proved effective and rewarding The book is aimed in particular at young people who are attracted by science or already undertaking undergraduate studies and who are considering making science their long term profession It will also be helpful and revealing to early career scientists who are searching for their own best route to success The book serves as a platform for experienced scientists to describe their original inclination how that subjective disposition found its expression in their way of doing science whether their expectations were met and what achievements they can claim But it is not restricted to success contributors also share details of the limitations and failures they have encountered Last but not least they describe how they see science now how they think it will be in the near future and what advice they would give to their much younger colleagues Readers will appreciate the diversity of the individual paths shaped by different education motivation ambition inclination intuition feeling belief and eligibility At the same time the stories confirm that science relies on a translation of this subjective level into an objective level one that is shared and accepted by the international scientific community and whose results are produced with a commonly accepted and fully

Selected Topics in the History of Biochemistry G. Semenza, 2012-12-02 One of the most exciting developments in biological sciences has been their merging with chemistry and physics resulting in the new disciplines of biochemistry biophysics and molecular biology As the developments of these new disciplines has been so rapid many of the key discoveries have occurred within the life time of a number of prominent scientists in the field The chapters in this and in future volumes are meant to complement with personal recollections by these scientists the History of Biochemistry in this series vols 30 33 by M Florkin and Vol 34 by P Laszlo These bibliographic and autobiographic chapters convey to the reader lively albeit at times subjective views on both the scientific and social environments of the authors The editor considered it presumptuous to

give the authors narrow guidelines or to suggest changes in the chapters he received The contributions assembled in this volume will convey the flavour of each author's particular personality *Scarcity's Ways: The Origins of Capital* M.S. Macrakis, 2013-03-09 invoking the fluctuation dissipation theorems of Einstein and 2 more recently those of Callen and Kubo in order to get to manageable results In this manner great strides have been made in the development of the many body problem without reaching the necessity to legitimize thermodynamics Thermodynamics and statistical mechanics were used successfully as bridges and guides to get the new ideas to conform to the macroscopic experiences measurements Hence the disinterest of theoreticians The frustration in attracting the attention of the working physicists on this problem is vividly described in Carnap's 1978 account on the reception of his ideas and efforts at the Institute of Advanced Studies at Princeton where he worked on the Two Essays on Entropy it almost amounted he thought to a conspiracy of silence The priorities of theoretical physicists remain with the puzzles and the cranking at hand Quantum Field Theory QFT and creation and annihilation physics solid state physics to mention only a few research areas command the attention of those working on the research frontiers Thermodynamics is taken for granted and is thought to be an almost depleted research area Whatever the subterfuges the hand waving arguments the pedagogical red herrings the procedures work and nothing can be gained by allocating intellectual resources to resolve ambiguities with few if any expected rewards Down deep all believe that the regularization of the field will one day be accomplished

scientific progress Translated from J kely G Master are you awake A fictitious dialogue on genetics development and evolution 2006 Bratislava Kalligram *Who Wrote the Book of Life?* Lily E. Kay, 2000 This is a detailed history of one of the most important and dramatic episodes in modern science recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature heredity and society Drawing on archives published sources and interviews the author situates work on the genetic code 1953 70 within the history of life science the rise of communication technosciences cybernetics information theory and computers the intersection of molecular biology with cryptanalysis and linguistics and the social history of postwar Europe and the United States Kay draws out the historical specificity in the process by which the central biological problem of DNA based protein synthesis came to be metaphorically represented as an information code and a writing technology and consequently as a book of life This molecular writing and reading is part of the cultural production of the Nuclear Age its power amplified by the centuries old theistic resonance of the book of life metaphor Yet as the author points out these are just metaphors analogies not ontologies Necessary and productive as they have been they have their epistemological limitations Deploying analyses of language cryptology and information theory the author persuasively argues that technically speaking the genetic code is not a code DNA is not a language and the genome is not an information system objections voiced by experts as early as the 1950s Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower Genomic textuality has become a fact of life a metaphor literalized she claims as human genome projects promise new levels of control over life through the meta level of information control of the word the DNA sequences and its editing and rewriting But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic book of life Bibliography of the History of Medicine ,1979 **Proteins, Enzymes, Genes** ,
