Spradlin,P.B. Porterfield,2012-12-06 Who are we What are we How do we fit into the world Or into the universe These and other questions pertaining to ourselves and our

environment are as compelling to us today as they were to our primitive ancestors Throughout our history we have developed paradigms of thought that have attempted to answer these questions each conceptual framework being particularly relevant to its age We are in the twentieth century witnessing a complete reorganization of our thinking We are now with the aid of technology able to bring together both ancient and new patterns of thought and to observe the emergence of a kaleidoscopic world view that is uniting the once dissonant theories of philosophy religion and science This book sketches an historical picture of three world views that have shaped our ideas about ourselves These conceptual formats that have so influenced us are not mutually exclusive and are present in all of us simultaneously although to varying degrees depending upon our individual biases

Towards a History of Consciousness Vwadek P. Marciniak, 2006 Towards a History of Consciousness Space Time and Death offers a cogent and compelling discussion of the neglected topic of the history of consciousness An analysis of our postmodern ontology reveals deep but neglected roots What are those roots and how did they grow Is there a self without consciousness What is the relation of the self to the individual Does the recognition of death contribute to the growth of consciousness As a survey of western history this work pushes the boundaries of the understanding of consciousness in intriguing and sometimes provocative directions This integrative study is intended for the serious curious student and thinker

Ontology and Closeness in Human-Nature Relationships Neil H. Kessler, 2018-10-10 In Ontology and Closeness in Human Nature Relationships Neil H Kessler identifies the preconceptions which can keep the modern human mind in the dark about what is happening relationally between humans and the more than human world He has written an accessible work of environmental philosophy with a focus on the ontology of human nature relationships In it he contends that large scale environmental problems are intimate and relational in origin He also challenges the deeply embedded modernist assumptions about the relational limitations of more than human beings ones which place erroneous limitations on the possibilities for human more than human closeness Diverging from the posthumanist literature and its frequent reliance on new materialist ontology the arguments in the book attempt to sweep away what ecofeminists call human nature dualisms In doing so conceptual avenues open up that have the power to

radically alter how we engage in our daily interactions with the more than human world all around us Given the diversity of fields and disciplines focused on the human nature relationship the topics of this book vary quite broadly but always converge at the nexus of what is possible between humans and more than human beings The discussion interweaves the influence of human nature dualisms with the limitations of Deleuzian becoming and posthumanism s new materialism and agential realism It leverages interhuman interdependence theory Charles Peirce s synechism of feeling and various treatments of Theory of Mind while exploring the influence of human nature dualisms on sustainability place attachment common worlds pedagogy emergence and critical animal studies It also explores the implications of plant electrical activity plant intelligence and plant neurobiology for possibilities of relational capacities in plants while even grappling with theories of animism to challenge the animate inanimate divide The result is an engaging novel treatment of human nature relational ontology that will encourage the reader to look at the world in a whole new way

writings on the history of Western philosophy from ancient to modern along with new writings on the philosophy of the mid 20th century covering important contributions from continental philosophers and philosophers of the post Wittgenstein anglophone tradition including the work of many women who have too often been neglected by the historical record A History of Modern Experimental Psychology George Mandler,2011-01-21 The evolution of cognitive psychology traced from the beginnings of a rigorous experimental psychology at the end of the nineteenth century to the cognitive revolution at the end of the twentieth and the social and cultural contexts of its theoretical developments Modern psychology began with the adoption of experimental methods at the end of the nineteenth century Wilhelm Wundt established the first formal laboratory in 1879 universities created independent chairs in psychology shortly thereafter and William James published the landmark work Principles of Psychology in 1890 In A History of Modern Experimental Psychology George Mandler traces the evolution of modern experimental and theoretical psychology from these beginnings to the cognitive revolution of the late twentieth century Throughout he emphasizes the social and cultural context showing how different theoretical developments reflect the characteristics and values of the society in which they occurred Thus Gestalt psychology can be seen to mirror the changes in visual and intellectual culture at the turn of the century behaviorism to embody the parochial and puritanical concerns of early twentieth century America and contemporary cognitive psychology as a product of the postwar revolution in information and communication After discussing the meaning and history of the concept of mind Mandler treats the history of the psychology of thought and memory from the late nineteenth century to the end of the twentieth exploring among other topics the discovery of the unconscious the destruction of psychology in Germany in the 1930s and the relocation of the field s center of gravity to the United States He then examines a more neglected part of the history of psychology the emergence of a new and robust cognitive psychology under the umbrella of cognitive science The Psychological Roots of Religious Belief M. D. Faber,2010-06-03 In this insightful new study M D Faber whose previous work on the psychology of religion has won widespread critical acclaim offers a comprehensive naturalistic explanation of religious experience from the intertwining perspectives of neuroscience and developmental psychology Faber here argues that belief in God the powerful sensation of his presence and the heartfelt assent to the reality of the supernatural are all produced by the mind brain s inherent tendency to discover in religious narrative a striking memorial echo of its own biological development Although Faber maintains that we are not wired specifically for God as many contend our brain is so constructed as to make us profoundly susceptible to religious myths These myths encourage us to map our early internalized experience onto a variety of supernatural narratives with the figure of the Parent God and his angelic assistants at the center A key point of Faber s analysis is the connection between the onset of infantile amnesia during childhood s later years and the evocative power of religious mythology Although we cannot explicitly recall our earliest interactions with our parents or other caregivers religious narratives can and do jog these implicit emotional memories in an uncanny way which prompts us to accede to

religion's central tenet namely that we are in the care of an omnipotent parental provider who watches over us and ministers to our needs. In the final analysis, religious experience attempts to recapture and to reinstate in an idealized form the symbiotic union of the early parent-child relation. This pioneering, highly original work takes the reader to the neurological-psychological bedrock of religious experience. *Choice*, 1985

A Rational Faith Joshua Sijuwade, 2025-03-27 A comprehensive analysis of Richard Swinburne's intellectual journey and philosophical work. *A Rational Faith* explores the legacy of one of the most influential and rigorous philosophical defenders of theism. Across Swinburne's written career, he has displayed a deep commitment to demonstrating the intellectual credibility of the Christian faith facing modern scientific and philosophical challenges and the materialistic worldview of modern intellectualism. Analysing his life and work through in-depth, accessible explanations of key issues and their context, Joshua Sijuwade brings together collected criticism of Swinburne's work and explores possible counter-arguments alongside a foreword by Richard Swinburne himself. Suitable for any reader interested in Swinburne's philosophy, first approach, or those intrigued by a philosophical defence of the Christian faith, *A Rational Faith* reveals Swinburne's life and work as a witness to his belief that belief in the central tenets of the Christian faith is rational.

The Origins of Musicality Henkjan Honing, 2019-08-20 Interdisciplinary perspectives on the capacity to perceive, appreciate, and make music. Research shows that all humans have a predisposition for music just as they do for language. All of us can perceive and enjoy music even if we can't carry a tune and consider ourselves unmusical. This volume offers interdisciplinary perspectives on the capacity to perceive, appreciate, and make music. Scholars from biology, musicology, neurology, genetics, computer science, anthropology, psychology, and other fields consider what music is for and why every human culture has it, whether musicality is a uniquely human capacity and what biological and cognitive mechanisms underlie it. Contributors outline a research program in musicality and discuss issues in studying the evolution of music, consider principles, constraints, and theories of origins, review musicality from cross-cultural, cross-species, and cross-domain perspectives, discuss the computational modeling of animal song and creativity, and offer a historical context for the study of musicality. The volume aims to identify the basic neurocognitive mechanisms that constitute musicality and effective ways to study these in human and nonhuman animals and to develop a method for analyzing musical phenotypes that point to the biological basis of musicality.
