Ornithology John Faaborg, Susan B. Chaplin, 2010      *Laboratory Manual and Field Exercises [to Accompany] Ornithology* John Faaborg, Susan B. Chaplin, 1988      **Laboratory Manual and Field Exercises [to Accompany] Ornithology** John Faaborg, Susan B. Chaplin, 1988      Avian Energetics and Nutritional Ecology C. Carey, 2012-12-06 A symposium held in 1973 chaired and organized by William R Dawson was the first major attempt to summarize and synthesize the existing information in the then emerging field of avian energetics The symposium featured papers by James R King William A Calder III Vance A Tucker and Robert E Ricklefs and commentaries by George A Bartholomew S Charles Kendeigh and Eugene P Odum The proceedings of the symposium Avian Energetics Paynter 1974 played a critical role in stimulating interest and research in the field of avian energetics Some twenty odd years later we are making another attempt to summarize the information in the field of avian energetics Some obvious differences exist between its predecessor and this volume Numerous improvements in methodology such as the use of doubly labeled water to estimate metabolism in free living birds now allow researchers to ask questions that could not be addressed previously Second consideration of nutrition is now inseparable from that of energetics This merger is necessary not only because food intake is the source of both energy and nutrients but also because one or more nutrients rather than energy can be limiting for a given species in a particular instance Finally the study of energetics and nutritional ecology particularly in birds and mammals has grown so dramatically that a single volume can now only partially cover the range of possible topics and can catalogue only a sampling of all the studies on the subject      *Clinical Anatomy and Physiology for Veterinary Technicians - E-Book* Thomas P. **Behavior of Marine Animals** Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21 The majority of the chapters in this volume are structured to include a balance between literature review original data and synthesis The research approaches taken by the authors are generally of two kinds One centers on the long term in depth study of a single species in which many aspects of its natural history are examined in detail The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities Most of the chapters concern obvious aspects of breeding behavior including habitat selection the effects of age on breeding communication mating systems synchrony of breeding activities development of behavior pre fledging parental care and post fledging parental care Of these topics many relate directly to the advantages and disadvantages of coloniality a conspicuous behavior pattern in marine birds As such they provide a picture for the further study of coloniality and the social behavior of many other animals Other important areas of marine bird breeding behavior such as courtship behavior antipredator behavior information transfer have not been included because of space limitations Since man's encroachment on the seashore and continental shelf poses certain threats to marine birds a volume elucidating various aspects of their biology has multiple uses As well as being of value to ornithologists the volume should be useful to managers involved with coastal planning
