Eating on the Wild Side Nina L. Etkin, 2000-11-01 People have long used wild plants as food and medicine and for a myriad of other important cultural applications While these plants and the foraging activities associated with them have been dismissed by some observers as secondary or supplementary or even backward their contributions to human survival and well being are more significant than is often realized Eating on the Wild Side spans the history of human plant interactions to examine how wild plants are used to meet medicinal nutritional and other human needs Drawing on nonhuman primate studies evidence from prehistoric human populations and field research among contemporary peoples practicing a range of subsistence strategies the book focuses on the processes and human ecological implications of gathering semidomestication and cultivation of plants that are unfamiliar to most of us Contributions by distinguished cultural and biological anthropologists paleobotanists primatologists and ethnobiologists explore a number of issues such as the consumption of unpalatable and famine foods the comparative assessment of aboriginal diets with those of colonists and later arrivals and the apparent self treatment by sick chimpanzees with leaves shown to be pharmacologically active Collectively these articles offer a theoretical framework emphasizing the cultural evolutionary processes that transform plants from wild to domesticated with many steps in between while placing wild plant use within current discussions surrounding biodiversity and its conservation Eating on the Wild Side makes an important contribution to our understanding of the links between biology and culture describing the interface between diet medicine and natural products By showing how various societies have successfully utilized wild plants it underscores the growing concern for preserving genetic diversity as it reveals a fascinating chapter in the human ecology
