## **Return To The Moon :**

**Return to the Moon** Harrison Schmitt, 2007-12-28 Former NASA Astronaut Harrison Schmitt advocates a private investor based approach to returning humans to the Moon to extract Helium 3 for energy production to use the Moon as a platform for science and manufacturing and to establish permanent human colonies there in a kind of stepping stone community on the way to deeper space With governments playing a supporting role just as they have in the development of modern commercial aeronautics and agricultural production Schmitt believes that a fundamentally private enterprise is the only type of organization capable of sustaining such an effort and eventually even making it pay off **Artemis Mission** Joe Rhatigan, Beth Adelman, 2024-01-01 It's been more than fifty years since humans stepped foot on the moon NASA's Artemis mission is not just to put humans back on the moon including the first woman and the first person of color Its goal is to keep them there for deeper space exploration into the solar system than ever before Next stop Mars Return to the Moon David Jefferis, Mat Irvine, 2007 After NASA put a man on the Moon the space program switched gears and concentrated on other areas of exploration and research What if we were to return to the Moon today Return to the Moon asks and answers many questions about future space travel to the Moon and its possible colonization **Returning People to the Moon After Apollo** Pat Norris, 2019-06-04 July 2019 marks 50 years since Neil Armstrong took his famous first steps on the surface of the Moon As people around the world celebrate the anniversary of this great American achievement they might wonder why there have been no further human missions to the Moon since Apollo 17 in 1972 This book assesses the legacy of the Apollo missions based on several decades of space developments since the program's end The question of why we haven't sent humans back to the Moon is explored through a multidisciplinary lens that weaves together technological and historical perspectives The nine manned Apollo missions including the six that landed on the Moon are described here by an author who has 50 years of experience in the space industry and whose work spanned the Apollo 8-13 missions The final section of the book provides a comprehensive assessment of today's programs and current plans for sending humans to the Moon **Softened Moon's Glow: Collective Works** Connie L. Valentine, Jon R. W. Thomas, 2015-02-15 David and Abby hoped to live simply but were confronted by other world influences that radically changed their expectations plans ideals and perceptions *NASA Technical Note*, 1972 Old Moore's Monthly Messenger, 1914 **Splendour of the Heavens** Theodore Evelyn Reece Phillips, William Herbert Steavenson, 1925 *Astronomy for Students and General Readers* Simon Newcomb, Edward Singleton Holden, 1880 **An Introduction to Astronomy** Denison Olmsted, 1887 **Spacecraft Operations** Florian Sellmaier, Thomas Uhlig, Michael Schmidhuber, 2022-06-14 This book describes the basic concepts of spacecraft operations for both manned and unmanned missions The first part of the book provides a brief overview of the space segment The next four parts deal with the classic areas of space flight operations mission operations communications and infrastructure the flight dynamics system and the mission planning system This is followed by a part describing the

operational tasks of the various subsystems of a classical satellite in Earth orbit The last part describes the special requirements of other mission types due to the presence of astronauts the approach of a satellite to another target satellite or leaving Earth orbit in interplanetary missions and landing on other planets and moons The 2nd edition is published seven years after the first edition It contains four new chapters on flight procedures the human factors ground station operation and software and systems In addition several chapters have been extensively expanded The entire book has been brought up to date and the language has been revised This book is based on the Spacecraft Operations Course held at the German Space Operations Center However the target audience of this book is not only the participants of the course but also students of technical and scientific courses as well as technically interested people who want to gain a deeper understanding of spacecraft operations
