**Queering Faith in Fantasy Literature** Taylor Driggers,2022-01-13 Fantasy literature inhabits the realms of the orthodox and heterodox the divine and demonic simultaneously making it uniquely positioned to imaginatively re envision Christian theology from a position of difference Having an affinity for the monstrous and the other and a preoccupation with desires and forms of embodiment that subvert dominant understandings of reality fantasy texts hold hitherto unexplored potential for articulating queer and feminist religious perspectives Focusing primarily on fantastic literature of the mid to late twentieth century this book examines how Christian theology in the genre is dismantled re imagined and transformed from the margins of gender and sexuality Aligning fantasy with Derrida s theories of deconstruction Taylor Driggers explores how the genre can re figure God as the other excluded and erased from theology Through careful readings of C S Lewis s *Till We Have Faces* Angela Carter s *The Passion of New Eve* and Ursula K Le Guin s *The Left Hand of Darkness* and the *Earthsea* novels Driggers contends that fantasy can challenge cis normative heterosexual and patriarchal theology Also engaging with the theories of Hélène Cixous Luce Irigaray Marcella Althaus Reid and Linn Marie Tonstad this book demonstrates that whilst fantasy cannot save Christianity from itself nor rehabilitate it for marginalised subjects it confronts theology with its silenced others in a way that bypasses institutional debates on inclusion and leadership asking how theology might be imagined otherwise

**The Subject of Race in American Science Fiction** Sharon DeGraw,2006-12-19 While the connections between science fiction and race have largely been neglected by scholars racial identity is a key element of the subjectivity constructed in American SF In his Mars series Edgar Rice Burroughs primarily supported essentialist constructions of racial identity but also included a few elements of racial egalitarianism Writing in the 1930s George S Schuyler revised Burroughs normative SF triangle of white author white audience and white protagonist and promoted an individualistic highly variable concept of race instead While both Burroughs and Schuyler wrote SF focusing on racial identity the largely separate genres of science fiction and African American literature prevented the similarities between the two authors from being adequately acknowledged and explored Beginning in the 1960s Samuel R Delany more fully joined SF and African American literature Delany expands on Schuyler s racial constructionist approach to identity including gender and sexuality in addition to race Critically intertwining the genres of SF and African American literature allows a critique of the racism in the science fiction and a more accurate and positive portrayal of the scientific connections in the African American literature Connecting the popular fiction of Burroughs the controversial career of Schuyler and the postmodern texts of Delany illuminates a gradual change from a stable essentialist construction of racial identity at the turn of the century to the variable social construction of poststructuralist subjectivity today

*Stars in My Pocket Like Grains of Sand* Samuel R. Delany, 2004-12-15 The story of a truly galactic civilization with over 6 000 inhabited worlds *The Digitally Disposed* Seb Franklin, 2021-06-22 Locates the deep history of digitality in the development of racial capitalism Seb Franklin sets out a media theory of racial capitalism to examine digitality s racial capitalist foundations The Digitally Disposed shows how the promises of boundless connection flexibility and prosperity that are often associated with digital technologies are grounded in racialized histories of dispossession and exploitation Reading archival and published material from the cybernetic sciences alongside nineteenth century accounts of intellectual labor twentieth century sociometric experiments and a range of literary and visual works The Digitally Disposed locates the deep history of digitality in the development of racial capitalism Franklin makes the groundbreaking argument that capital s apparently spontaneous synthesis of so called free individuals into productive circuits represents an informatics of value On the one hand understanding value as an informatic relation helps to explain why capital was able to graft so seamlessly with digitality at a moment in which it required more granular and distributed control over labor the moment that is often glossed as the age of logistics On the other hand because the informatics of value sort populations into positions of higher and lower capacity value and status understanding their relationship to digitality requires that we see the digital as racialized and gendered in pervasive ways Ultimately The Digitally Disposed questions the universalizing assumptions that are maintained remade and intensified by today s dominant digital technologies Vital and far reaching The Digitally Disposed reshapes such fundamental concepts as cybernetics informatics and digitality

Mokyr,1992-04-09 In a world of supercomputers genetic engineering and fiber optics technological creativity is ever more the key to economic success But why are some nations more creative than others and why do some highly innovative societies such as ancient China or Britain in the industrial revolution pass into stagnation Beginning with a fascinating concise history of technological progress Mokyr sets the background for his analysis by tracing the major inventions and innovations that have transformed society since ancient Greece and Rome What emerges from this survey is often surprising the classical world for instance was largely barren of new technology the relatively backward society of medieval Europe bristled with inventions and the period between the Reformation and the Industrial Revolution was one of slow and unspectacular progress in technology despite the tumultuous developments associated with the Voyages of Discovery and the Scientific Revolution What were the causes of technological creativity Mokyr distinguishes between the relationship of inventors and their physical environment which determined their willingness to challenge nature and the social environment which determined the openness to new ideas He discusses a long list of such factors showing how they interact to help or hinder a nation s creativity and then illustrates them by a number of detailed comparative studies examining the differences between Europe and China between classical antiquity and medieval Europe and between Britain and the rest of Europe during the industrial revolution He examines such aspects as the role of the state the Chinese gave up a millennium wide lead in shipping to the Europeans for example when an Emperor banned large ocean going vessels the impact of science as well as religion politics and even nutrition He questions the importance of such commonly cited factors as the spill over benefits of war the abundance of natural resources life expectancy and labor costs Today an ever greater number of industrial economies are competing in the global market locked in a struggle that revolves around technological ingenuity The Lever of Riches with its keen analysis derived from a sweeping survey of creativity throughout history offers telling insights into the question of how Western economies can maintain and developing nations can unlock their creative potential
