religion age and gender Explaining Conversations R. Murray Thomas, Marie K. Iding, 2012 Explaining Conversations offers a different way of interpreting people's social exchanges than has been available in the past. The book is replete with examples of people's verbal interactions in the form of chats, arguments, debates, and negotiations both within a culture and across cultures. The volume's subtitle, *A Developmental Social Exchange Theory*, identifies a theme featured in Chapters 2 and 5: the typical pattern by which social exchange skills evolve over the first two decades of life. Throughout the book, the underlying meanings of conversations are interpreted in terms of: a) the needs people seek to fulfill through their conversations; b) the influence of a person's culture on what is said; c) individuals' patterns of thought; metacognition during a conversation; d) how people's expectations about a conversation affect what they will say; and e) strategies individuals adopt to achieve their goals. The book includes a chapter designed to guide parents and teachers in promoting young children's and adolescents' social exchange skills.

Measured Words Arielle Saiber, 2017-11-29 *Measured Words* explores the rich commerce between computation and writing that proliferated in fifteenth and sixteenth century Italy. In this captivating and generously illustrated work, Arielle Saiber studies the relationship between number, shape, and the written word in the works of four exceptional thinkers of the time: Leon Battista Alberti, Luca Pacioli, Niccolò Tartaglia, and Giambattista Della Porta. Although these Renaissance humanists came from different social classes and practised the mathematical and literary arts at varying levels of sophistication, they were all guided by a sense that there exist deep ontological and epistemological bonds between computational and verbal thinking and production. Their shared view that a network or continuity exists between the literary arts and mathematics yielded extraordinary results: from Alberti's treatise on cryptography and Pacioli's design calculations for the Roman alphabet to Tartaglia's poetic solutions of cubic equations and Della Porta's dramatic applications of geometry. Through lively, cogent analysis of these and other related texts of the period, *Measured Words* presents literally and figuratively brilliant examples of what interdisciplinary work can offer us. 1915, 1915 **Dialectical**

Approaches to Studying Personal Relationships Barbara M. Montgomery, Leslie A. Baxter, 2013-09-13 This book describes many different and useful ways of understanding personal relationships from a dialectical perspective. It is written for scholars in higher education, both faculty and students, across many fields within the social sciences and the humanities who seek answers to questions about how people relate to one another. The book is valuable for all scholars who pursue new ideas because it models a form of scholarly communication in which multiple voices can be acknowledged as valid; the worth of one perspective is not measured by the denigration of another, and difference is celebrated as conducive to learning rather than threatening to it. The contributors emphasize the characteristics of their dialectical view that set them apart from other dialectical authors and describe their methods of studying relationships from a dialectical perspective. Following the Bakhtinian perspective, they honor the values of dialogism by respecting different and sometimes contradictory views, assuming that these views can be valid and joining in a discussion with the editors and other contributors about their

emerging work They also acknowledge that the chapters in this text are part of an ongoing process to frame and reframe emerging ideas and allow the dialogue that occurs within this frame the freedom to express creative unique ideas
