Reversibility In Natural Language Procebing:

Reversible Grammar in Natural Language Processing T. Strzalkowski,2012-12-06 Reversible grammar allows computational models to be built that are equally well suited for the analysis and generation of natural language utterances This task can be viewed from very different perspectives by theoretical and computational linguists and computer scientists The papers in this volume present a broad range of approaches to reversible bi directional and non directional grammar systems that have emerged in recent years This is also the first collection entirely devoted to the problems of reversibility in natural language processing Most papers collected in this volume are derived from presentations at a workshop held at the University of California at Berkeley in the summer of 1991 organised under the auspices of the Association for Computational Linguistics This book will be a valuable reference to researchers in linguistics and computer science with interests in computational linguistics natural language processing and machine translation as well as in practical aspects of computability   Reversibility in Natural Language Processing Gerardus Johannes Maria van Noord,Gertjan van Noord,1993

Survey of the State of the Art in Human Language Technology Giovanni Battista Varile,Antonio Zampolli,1997 Originally published in 1997 this book is concerned with human language technology This technology provides computers with the capability to handle spoken and written language One major goal is to improve communication between humans and machines If people can use their own language to access information working with software applications and controlling machinery the greatest obstacle for the acceptance of new information technology is overcome Another important goal is to facilitate communication among people Machines can help to translate texts or spoken input from one human language to the other Programs that assist people in writing by checking orthography grammar and style are constantly improving This book was sponsored by the Directorate General XIII of the European Union and the Information Science and Engineering Directorate of the National Science Foundation USA   *AI 2003: Advances in Artificial Intelligence* Tamas D. Gedeon,Lance C.C. Fung,2003-12-01 Consider the problem of a robot algorithm learning mechanism moving along the real line attempting to locate a particular point To assist the me anism we assume that it can communicate with an Environment Oracle which guides it with information regarding the direction in which it should go If the Environment is deterministic the problem is the Deterministic Point cation Problem which has been studied rather thoroughly 1 In its pioneering version 1 the problem was presented in the setting that the Environment could charge the robot a cost which was proportional to the distance it was from the point sought for The question of having multiple communicating robots locate a point on the line has also been studied 1 2 In the stochastic version of this problem we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic i e possibly erroneous instead of deterministic responses from the environment Thus when it should really be moving to the right it may be advised to move to the left and vice versa Apart from the problem being of importance in its own right the stoch tic pointlocationproblemalsohas potentialapplications insolvingoptimization

Iwańska,Stuart C. Shapiro,2000-06-19 Traditionally knowledge representation and reasoning systems have incorporated natural language as interfaces to expert systems or knowledge bases that performed tasks separate from natural language processing As this book shows however the computational nature of representation and inference in natural language makes it the ideal model for all tasks in an intelligent computer system Natural language processing combines the qualitative characteristics of human knowledge processing with a computer s quantitative advantages allowing for in depth systematic processing of vast amounts of information   *Steganography - The Art of Hiding Information* Joceli Mayer,2024-10-23 This book provides a selection of chapters on the subject of steganography Steganography is the practice of undetectably altering a digital work to embed a message The undetectability of the message in the altered work is an essential property of steganography whereas the required alterations in the work may be perceived as long as the hidden information is undetectable and therefore also undecipherable by non authorized parties The design of a steganographic algorithm concerns the properties of the communication medium or channel the cover work usually in digital format and the functions of embedding and decoding the message As cybersecurity becomes increasingly essential to communications worldwide hidden or undetectable communication provided by enhanced steganography techniques enables the secure information sharing required by many applications For business governmental or personal sharing of information via communication networks countermeasures need to be taken to ensure that a third party is unable to detect the existence of a message embedded in the work and to avoid even attempts at decoding the information without the authorization of the sender The property of undetectability of steganography along with cryptographic techniques has derived secure information schemes in

the literature and has been applied in practice The issues and properties of steganography have been investigated by scientists and practitioners in order to evolve techniques to improve security while sharing information on the open network This book offers chapters on steganography ranging from definitions to the basics issues and properties scientific research on diverse techniques applications for a variety of areas cybersecurity military or defense law enforcement healthcare financial services etc and discussions on future applications and current research on the topic   **Digital Forensics and Watermarking** Bin Ma,Jian Li,Qi Li,2024-04-24 This book constitutes the refereed post proceedings of the 22nd International Workshop on Digital Forensics and Watermarking IWDW 2023 held in Jinan China during November 25 26 2023 The 22 full papers included in this book were carefully reviewed and selected from 48 submissions The workshop focuses on subjects such as novel research development and application of digital watermarking data hiding and forensic techniques for multimedia security   Graph Grammars and Their Application to Computer Science Janice Cuny,1996-05-08 This book describes the functional properties and the structural organization of the members of the thrombospondin gene family These proteins comprise a family of extracellular calcium binding proteins that modulate cellular adhesion migration and proliferation Thrombospondin 1 has been shown to function during angiogenesis wound healing and tumor cell metastasis   *New Concepts in Natural Language Generation* Helmut Horacek,Michael Zock,1993 This book aims to inform scholars working in the domain of natural language generation man machine interface automatic translation text generation about the most recent advances in the field whether in the domain of grammar theories or discourse planning ie how to structure the message in such a way that the reader can easily follow the writer s train of thought It is in particular in this domain discourse planning that significant advances has been achieved during the last five years   Artificial Intelligence and Security Xingming Sun,Zhaoqing Pan,Elisa Bertino,2019-07-18 The 4 volume set LNCS 11632 until LNCS 11635 constitutes the refereed proceedings of the 5th International Conference on Artificial Intelligence and Security ICAIS 2019 which was held in New York USA in July 2019 The conference was formerly called International Conference on Cloud Computing and Security with the acronym ICCCS The total of 230 full papers presented in this 4 volume proceedings was carefully reviewed and selected from 1529 submissions The papers were organized in topical sections as follows Part I cloud computing Part II artificial intelligence big data and cloud computing and security Part III cloud computing and security information hiding IoT security multimedia forensics and encryption and cybersecurity Part IV encryption and cybersecurity   *Proceedings of the Eighth Biennial Conference of the Canadian Society for Computational Studies of Intelligence, University of Ottawa, Ottawa, Ontario, Canada 22-25 May 1990* Canadian Society for Computational Studies of Intelligence.
