Selected Papers/Ausgewählte Schriften K. Goldstein, 2011-11-08 **Plasticity and Pathology** David Bates, Nima Bassiri, 2016-01-15 Two leading neuroscientists examine the current paradigm of the neural subject and what we can learn from neurological trauma pathology and adaption With the rise of cognitive science and the revolution in neuroscience the study of human subjects thinking feeling acting individuals ultimately focuses on the human brain In both Europe and the United States massive state funded research is focused on mapping the brain in all its remarkable complexity The metaphors employed are largely technological using a diagram of synaptic connectivity as a path to understanding human behavior But alongside this technologized discourse we find another perspective one that emphasizes the brain s essential plasticity both in development and as a response to traumas such as strokes tumors or gunshot wounds This collection of essays brings together a diverse range of scholars to investigate how the neural subject of the twenty first century came to be Taking approaches both historical and theoretical they probe the possibilities and limits of neuroscientific understandings of human experience Topics include landmark studies in the history of neuroscience the relationship between neural and technological pathologies and analyses of contemporary concepts of plasticity and pathology in cognitive neuroscience Central to the volume is a critical examination of the relationship between pathology and plasticity Because pathology is often the occasion for neural reorganization and adaptation it exists not in opposition to the brain s normal operation but instead as something intimately connected to our

ways of being and understanding Encounters in Performance Philosophy Laura Cull Ó Maoilearca, A. Lagaay, 2014-10-16
 Encounters in Performance Philosophy is a collection of 14 essays by international researchers which demonstrates the vitality of the field of Performance Philosophy The essays address a wide range of concerns common to performance and philosophy including the body language performativity mimesis and tragedy *Clinical Neuropsychology and Technology* Thomas D. Parsons, 2016-03-30 This ambitious and accessible guide reviews innovative technologies enhancing the field of neuropsychological testing Starting with the premise that standard batteries some nearly a century old lag behind in our era of neuroimaging genomic studies psychophysiology and informatics it presents digital measures offering more efficient administration more accurate data and wider clinical applications Ecological validity and evidence based science are key themes in these advances from virtual environments and assessment of social cognition to the shift toward situational reliability and away from lab created constructs These chapters also demonstrate how high tech assessment tools can complement or supplement traditional pencil and paper measures without replacing them outright This book covers in depth The evolution of neuropsychological testing over the past century Current applications of computer based neuropsychological assessments The strengths and limitations of simulation technology The use of teleneuropsychology in reaching remote clients The potential of gaming technologies in neurocognitive rehabilitation How technology can transform test data into information useful across specialties Clinical Neuropsychology and Technology brings neuropsychologists clinical psychologists and rehabilitation specialists into the vanguard of assessment measures and processes that will translate into more accurate testing collaborations between disciplines and valid and useful outcomes **Understanding Merleau-Ponty, Understanding Modernism** Ariane Mildeberg, 2018-12-13 Understanding Merleau Ponty Understanding Modernism brings into dialogue Maurice Merleau Ponty s phenomenology with modernist art literature music film and neurophysiological discoveries opening up the complexities of the philosopher s phenomenology of perception to a broader audience across the arts An important resource for anyone interested in the links between modernism and philosophy Understanding Merleau Ponty Understanding Modernism offers close readings of Merleau Ponty s key texts explores modernist works in light of his thought and provides an extended glossary of Merleau Ponty s central terms and concepts Founding Community H.P. Steeves, 1998-02-28 The direction of this text is both phenomenological and prescriptive as it attempts to provide a phenomenological foundation for communitarian ethical theory It argues that the Ego and the Other arise together in sense and we are committed to community in a foundational way **Enactivist Interventions** Shaun Gallagher, 2017-07-26 Enactivist Interventions is an interdisciplinary work that explores how theories of embodied cognition illuminate many aspects of the mind including intentionality representation the affect perception action and free will higher order cognition and intersubjectivity Gallagher argues for a rethinking of the concept of mind drawing on pragmatism phenomenology and cognitive science Enactivism is presented as a philosophy of nature that has significant methodological

and theoretical implications for the scientific investigation of the mind Gallagher argues that like the basic phenomena of perception and action sophisticated cognitive phenomena like reflection imagining and mathematical reasoning are best explained in terms of an affordance based skilled coping He offers an account of the continuity that runs between basic action affectivity and a rationality that in every case remains embodied Gallagher's analysis also addresses recent predictive models of brain function and outlines an alternative enactivist interpretation that emphasizes the close coupling of brain body and environment rather than a strong boundary that isolates the brain in its internal processes The extensive relational dynamics that integrates the brain with the extra neural body opens into an environment that is physical social and cultural and that recycles back into the enactive process Cognitive processes are in the world rather than in the head they are situated in affordance spaces defined across evolutionary developmental and individual histories and are constrained by affective processes and normative dimensions of social and cultural practices *Canguilhem* Stuart Elden, 2019-07-12

Georges Canguilhem 1904-95 was an influential historian and philosopher of science as renowned for his teaching as for his writings He is best known for his book *The Normal and the Pathological* originally his doctoral thesis in medicine but he also wrote a thesis in philosophy on the concept of the reflex supervised by Gaston Bachelard He was the sponsor of Michel Foucault's doctoral thesis on madness However his work extends far beyond what is suggested by his association with these thinkers Canguilhem also produced a series of important works on the natural sciences including studies of evolution psychology vitalism and mechanism experimentation monstrosity and disease Stuart Elden discusses the whole of this important thinker's complex work including recently rediscovered texts and archival materials Canguilhem always approached questions historically examining how it was that we came to a significant moment in time outlining tensions detours and paths not taken The first comprehensive study in English this book is a crucial guide for those coming to terms with Canguilhem's important contributions and will appeal to researchers and students from a range of fields *Body, Text, and Science* M. Sawicki, 2013-12-01 What is scientific about the natural and human sciences Precisely this the legibility of our worlds and the distinctive reading strategies that they provoke That account of the essence of science comes from Edith Stein who as Husserl's assistant 1916-1918 labored in vain to bring his massive *Ideen* to publication and then went on to propose her own solution to the problem of finding a unified foundation for the social and physical sciences Stein argued that human bodily life itself affords direct access to the interplay of natural causality cultural motivation and personal initiative in history and technology She developed this line of approach to the sciences in her early scholarly publications which too soon were overshadowed by her religious lectures and writings and eventually were obscured by National Socialism's ideological attack on philosophies of empathy Today as her church prepares to declare Stein a saint her secular philosophical achievements deserve another look *Geschichte des Husserl-Archivs History of the Husserl-Archives* Husserl-Archiv Leuven, 2007-05-03 This book offers a fascinating view on the foundation and development of this important research

institute and of the Husserliana edition Father Van Breda's personal annotations which are made public for the first time in English here paint a captivating picture of the rescue of Husserl's manuscripts and the foundation of the Archives shortly before the second world war

Making Sense of Health, Disease, and the Environment in Cross-Cultural History: The Arabic-Islamic World, China, Europe, and North America Florence Bretelle-Establet, Marie Gaille, Mehrnaz

Katouzian-Safadi, 2020-01-01 This book has been defined around three important issues the first sheds light on how people in various philosophical religious and political contexts understand the natural environment and how the relationship between the environment and the body is perceived the second focuses on the perceptions that a particular natural environment is good or bad for human health and examines the reasons behind such characterizations the third examines the promotion in history of specific practices to take advantage of the health benefits or avoid the harm caused by certain environments and also efforts made to change environments supposed to be harmful to human health The feeling and or the observation that the natural environment can have effects on human health have been and are still commonly shared throughout the world This led us to raise the issue of the links observed and believed to exist between human beings and the natural environment in a broad chronological and geographical framework In this investigation we bring the reader from ancient and late imperial China to the medieval Arab world up to medieval modern and contemporary Europe This book does not examine these relationships through the prism of the knowledge of our modern contemporary European experience which still too often leads to the feeling of totally different worlds Rather it questions protagonists who in different times and in different places have reflected on their own terms on the links between environment and health and tries to obtain a better understanding of why these links took the form they did in these precise contexts This book targets an academic readership as well as an informed audience for whom present issues of environment and health can be nourished by the reflections of the past

Content and Object J. Cavallin, 2013-03-09 This study is a revised version of a book published in February 1990 under the same title as my Ph D thesis at the University of Stockholm Revision of an earlier work poses specific problems some of which deserve mentioning After the appearance of the first

version of this book new literature on related subjects and a new version of the principal Husserl text involved in the discussion have appeared The newer literature contains both accounts of Twardowski's thought and its relations to Husserl's philosophy though without referring to my study from 1990 largely because the texts concerned were conceived parallel to it though published later or independently of it It would seem anachronistic in this situation to enter into new and extensive discussions with the authors of this literature The choice made here has been to update the original study adding references to texts published after my study and to take account of points of views expressed I have retained the major part of the basic information given in the 1990 version although some of it might now be more familiar to interested students than it was in 1990

Husserl and the Question of Relativism G. Soffer, 2012-12-06 The question of relativism is a perennial one and as fundamental and far reaching as the question of truth itself Is truth absolute and universal the same everywhere and for everyone Or is truth historically culturally biologically or otherwise relative varying from one epoch or species to another Although the issues surrounding relativism have attracted especially intense interest of late they continue to spark heated controversies and to pose problems lacking an obvious resolution On the side of one prevalent form of relativism it is argued that we must finally recognize the historical and cultural contingency of our available means of cognition and therefore abandon as naïve the absolute conception of truth dear to traditional philosophy According to this line of thinking even if there were universally valid principles knowledge of them would not be possible for us and thus an absolute conception of truth must be rejected in light of the demands of critical epistemology However when truth is accordingly relativized to some contingent subjective cognitive background new difficulties arise One of the most infamous of these is the logical inconsistency of the resulting thesis of relativism itself Yet an even more serious problem is that the relativization of truth makes truth itself contingent thereby undermining the motivation for preferring one belief or value to another or even to its opposite

Transfinite Life Bruce Rosenstock, 2017-11-20 Oskar Goldberg was an important and controversial figure in Weimar Germany He challenged the rising racial conception of the state and claimed that the Jewish people were on a metaphysical mission to defeat race based statism He attracted the attention of his contemporaries Walter Benjamin Gershom Scholem Thomas Mann and Carl Schmitt among others with the argument that ancient Israel's sacrificial rituals held the key to overcoming the tyranny of technology in the modern world Bruce Rosenstock offers a sympathetic but critical philosophical portrait of Goldberg and puts him into conversation with Jewish and political figures that circulated in his cultural environment Rosenstock reveals Goldberg as a deeply imaginative and broad minded thinker who drew on biology mathematics Kabbalah and his interests in ghost photography to account for the origin of the earth Caricatured as a Jewish proto fascist in his day Goldberg's views of the tyranny of technology biopolitics and the new vitalism remain relevant to this day

aphasia through to the development of modern cognitive neuroscience Perception and its Development in Merleau-Ponty's Phenomenology Kirsten Jacobson, John Russon, 2017-06-30 French phenomenologist Maurice Merleau Ponty 1908 1961 shifted the terrain of western philosophy when he identified the body rather than consciousness as the primary site of our meaningful engagement with the world His magnum opus The Phenomenology of Perception 1945 revolutionized work in philosophy psychology cognitive science and other fields Perception and Its Development in Merleau Ponty s Phenomenology brings together essays from fifteen leading Merleau Ponty scholars to demonstrate the continuing significance of Merleau Ponty s analysis Mirroring the progression found in Merleau Ponty s Phenomenology of Perception the essays in this volume engage in original phenomenological research to demonstrate the dynamic development of perceptual life from perception s most foundational forms spatiality temporality intentionality etc to its richest articulations in political life and artistic activity This comprehensive volume is a powerful resource for students and scholars alike studying Merleau Ponty s philosophy and serves both as a commentary upon and companion to his The Phenomenology of Perception **Building Bridges** Rosa Spagnolo, 2020-09-10 There are extraordinarily exciting periods in the history of science which bring new openings on the fringes of a particular field We are in the midst of one of these periods a large number of new discoveries regarding the functioning of the mind are published every day These new findings in neuroscience are revealing unexpected aspects of neuroscience and pushing the entire field toward unexplored regions Besides the advancement in the understanding of psychic processes neuroscience offers psychoanalysts the opportunity to enhance the dialogue with psychiatrists neurologists and other scientists expanding the theoretical model It is clear that the relationship between psychoanalysis neuroscience and neuropsychanalysis is controversial So the dialogue between neuroscience and clinical findings is essential Building a bridge between neuropsychanalysis and psychoanalysis through the clinical session is the main purpose of the book which consists of two parts The first part provides a theoretical view on dream depression addiction panic and how to consider the study of a single case
