Twenty-Five Papers on Statistics and Probability Institut de statistiques mathématiques, American mathematical society, 1961 *Selected Translations in Mathematical Statistics and Probability*, 1961 **Selected translations in mathematical statistics and probability** D. V. Anosov, 1978 *Selected translations in mathematical statistics and probability* G.A. Ambarcumjan, 1963 **Continuous Multivariate Distributions, Volume 1** Samuel Kotz, Narayanaswamy Balakrishnan, Norman L. Johnson, 2019-01-17 Continuous Multivariate Distributions Volume 1 Second Edition provides a remarkably comprehensive self contained resource for this critical statistical area It covers all significant advances that have occurred in the field over the past quarter century in the theory methodology inferential procedures computational and simulational aspects and applications of continuous multivariate distributions In depth coverage includes MV systems of distributions MV normal MV exponential MV extreme value MV beta MV gamma MV logistic MV Liouville and MV Pareto distributions as well as MV natural exponential families which have grown immensely since the 1970s Each distribution is presented in its own chapter along with descriptions of real world applications gleaned from the current literature on continuous multivariate distributions and their applications *Argonne List of Serials* Argonne National Laboratory. Library Services Department, 1972 *Naval Research Logistics Quarterly*, 1971 *Estimation of Stochastic Processes with Stationary Increments and Cointegrated Sequences* Maksym Luz, Mikhail Moklyachuk, 2019-09-25 Estimation of Stochastic Processes is intended for researchers in the field of econometrics financial mathematics statistics or signal processing This book gives a deep understanding of spectral theory and estimation techniques for stochastic processes with stationary increments It focuses on the estimation of functionals of unobserved values for stochastic processes with stationary increments including ARIMA processes seasonal time series and a class of cointegrated sequences Furthermore this book presents solutions to extrapolation forecast interpolation missed values estimation and filtering smoothing problems based on observations with and without noise in discrete and continuous time domains Extending the classical approach applied when the spectral densities of the processes are known the minimax method of estimation is developed for a case where the spectral information is incomplete and the relations that determine the least favorable spectral densities for the optimal estimations are found **Technical Translations**, 1967 **Selected translations in mathematical statistics and probability** M. Aratò, 1973 **Soviet Mathematics - Doklady**, 1973 **The Collected Essays of Richard E. Quandt** Richard E. Quandt, 1992-01-01 Professor Richard Quandt has made a major contribution to the development of economics in the 20th century The range and significance of his work has long required a collection of his essays which will allow his contribution to be assessed as a whole Despite an early interest in microeconomic theory Richard Quandt has devoted most of his career to econometrics and in particular modal split estimation More recently his work has focused on the econometrics of disequilibrium models with reference to both free market and planned economies As well as outlining his

many articles in microtheory general econometrics disequilibrium modeling financial economics and the economics of planned economies this collection should have a particular value for all scholars interested in the emergence of the new economies in Eastern Europe a subject to which Professor Quandt has applied himself in recent years This book includes an introduction by Professor Quandt describing his early life in Budapest and the circumstances which led him to study economics in America

On Measures of Information and Their Characterizations Acze?l, 1975-12-17 This book deals with measures of information the most important ones being called entropies their properties and reciprocally with questions concerning which of these properties determine known measures of information and which are the most general formulas satisfying reasonable requirements on practical measures of information This is the first book investigating this subject in depth

Branching Processes Krishna B. Athreya, Peter E. Ney, 2012-12-06 The purpose of this book is to give a unified treatment of the limit theory of branching processes Since the publication of the important book of T E Harris *Theory of Branching Processes* Springer 1963 the subject has developed and matured significantly Many of the classical limit laws are now known in their sharpest form and there are new proofs that give insight into the results Our work deals primarily with this decade and thus has very little overlap with that of Harris Only enough material is repeated to make the treatment essentially self contained For example certain foundational questions on the construction of processes to which we have nothing new to add are not developed There is a natural classification of branching processes according to their criticality condition their time parameter the single or multi type particle cases the Markovian or non Markovian character of the process etc We have tried to avoid the rather uneconomical and unenlightening approach of treating these categories independently and by a series of similar but increasingly complicated techniques The basic Galton Watson process is developed in great detail in Chapters I and II
