

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

The Semantics of Opinion Melanie Bervoets, 2019-11-16 This volume sets out to provide a semantics for the future directed opining verbs a novel class whose members are used to describe subjects externally attested opinions toward future possibilities Including verbs like recommend promise and permit the class can be situated within a broader range of opinion verbs including the well known propositional attitudes and key to the investigation here are differences among these groups along the lines of available event types interaction with the common ground and restrictions on subjects and objects Other important semantic topics implicated in the discussion are dispositions free choice disjunction and Neg raising embedded NPI licensing and the host of new data associated with the future directed opining verbs prompts surveys of the expanded scope of these phenomena and corresponding re evaluation of existing theories Collectively the contributions of this work deepen our understanding of predicates that describe opinion and disposition and how these interact with fundamental logical operations like negation and disjunction highlighting the crucial role of contextual factors like relevance for these processes

Postcolonial Semantics Carsten Levisen, 2024-04-01 Global knowledge production increasingly happens through one particular language modern Anglo English What does the Anglocentric reliance of English words and phrases mean for the way we make claims formulate research questions and develop theories In this monograph these questions are scrutinized and explored through Postcolonial Semantics a new framework that draws on advances in postcolonial linguistics and cognitive cultural semantics Through original semantic work on Bislama words and Urban Pacific concepts each chapter provides alternatives to Anglocentric linguistic framings of knowledge in the domains of language communication sociology psychology and geopolitics Highlighting the pluriversality of meaning making and the multipolarity of knowledge the book speaks into central themes in semantics including the question of metalanguage and the representation of meaning as well as contact zone semantics and the colonial matrix of power All analyses are provided in both English and Bislama through a translatable semantic metalanguage of shared human concepts Apart from semanticists and postcolonial language scholars the monograph is of interest to researchers and research students in fields such as World Englishes creole studies linguistic anthropology intercultural pragmatics and global discourse studies

Statistical Semantics Sverker Sikström, Danilo Garcia, 2020-06-08 This book discusses the application of various statistical methods to texts rather than numbers in various fields in behavioral science It proposes an approach where quantitative methods are applied to data whereas previously such data were analyzed only by qualitative research methods To emphasize the quantitative aspects of semantics and the possibilities of conducting scientific interferences the book introduces the concept of statistical semantics and presents the reader with a subset of techniques found in that domain More specifically the book focuses on methods that allow the investigation of semantic relationships between words based on empirical corpus data It shows the reader how to apply various statistical methods on texts for example statistical tests to ascertain whether two sets of text are statistically different

ways to predict variables from text as well as how to summarize and graphically illustrate texts Thus the book presents an accessible hands on introduction to a selection of techniques indispensable for cognitive psychologists linguists and social psychologists
