Short-wave Radio and the Ionosphere. With Special Reference to Everyday Professional and Amateur Problems of Short-wave Transmission and Reception ... With 61 Illustrations. Second Edition [of "Radio Waves and the Ionosphere"]. T. W. BENNINGTON, 1950

Reality Radio, Second Edition John Biewen, Alexa Dilworth, 2017-02-13 This new revised and expanded edition of Reality Radio celebrates today's best audio documentary work by bringing together some of the most influential and innovative practitioners from the United States, Canada, the United Kingdom, and Australia. With a new foreword and five new essays, this book takes stock of the transformations in radio documentary since the publication of the first edition: the ascendancy of the podcast, greater cultural, racial, and topical variety, and the changing economics of radio itself. In twenty-four essays, total documentary artists tell and demonstrate through stories and transcripts how they make radio the way they do and why. Whether the contributors to the volume call themselves journalists, storytellers, or even audio artists, and although their essays are just as diverse in content and approach, all use sound to tell true stories artfully. Contributors include Jad Abumrad, Daniel Alarcón, Jay Allison, Damali Ayo, John Biewen, Emily Botein, Chris Brookes, Scott Carrier, Katie Davis, Sherre DeLys, Ira Glass, Alan Hall, Dave Isay, Natalie Kestecher, Starlee Kine, The Kitchen Sisters, Sarah Koenig, and Julie Snyder, Maria Martin, Karen Michel, Joe Richman, Dmae Roberts, Stephen Smith, Alix Spiegel, Sandy Tolan, and

NBS Technical Note, 1962 **Bibliography on
 Ionospheric Propagation of Radio Waves** Wilhelm Nupen, 1960 This bibliography comprises a non exhaustive compilation
 of over 1400 references to the world's literature in the ionosphere with special emphasis on its effect on reflection refraction
 or propagation of electromagnetic waves The frequencies involved are usually in the low frequency or long wave bands in
 contrast to those UHF VHF and SHF involved in tropospheric propagation investigations although the pulsed technique at
 vertical or slant incidence makes use of a wide range of frequencies

The Fullness of Space Gareth Wynn-Williams, 1992-05-28 This book describes the gas and dust that fills the space between the stars There is a full treatment of the methods that astronomers use to study this interstellar matter The author explains where the matter came from in the first place how it collects together in clouds and clumps and the way in which new stars and planets form from material in space Within our home galaxy the Milky Way the space is never completely empty Although the density is extremely low there is enough matter to make billions of new stars like the Sun We see the matter as glorious gas clouds such as the Orion Nebula shimmering in rich hues of red and orange Telescopes reveal inky black clouds the molecule factories in which new stars and planets are made Radio infrared and ultraviolet telescopes have given astronomers stunning new images of interstellar matter The Fullness of Space is a comprehensive account of what we know about the stuff between the stars It is beautifully illustrated with many of the finest photographs available of dust clouds and bright nebulas The text is non technical No detailed knowledge of astronomy is needed to enjoy this introduction

The book concludes with a look at the possible future of communications, the new developments to come, and the implications these will have for our everyday lives. Lavishly illustrated and including many original illustrations that show just how these new developments were received in their time, the book presents an informative and highly entertaining introduction to the field of communications. This revised second edition looks at the new developments in communications over the two decades since the first edition's release. *Aerospace Engineering Index*, 1951 *Aeronautical Engineering Review*, 1957 **Siting**

A brief summary of ionospheric effects upon HF radio signals is presented. Various factors required for an ideal site, such as Fresnel zone size and smoothness, noise, antenna height, vertical radiation angle, and electrical characteristics of the ground, are discussed. Standards to guide compromises for practical cases of siting are considered. A partial bibliography, which may be useful for those desiring a greater depth of understanding of the various subjects considered, is provided. **Nuclear Science Abstracts**, 1973-04 *Antarctica and the Arctic Circle* Andrew J.
