Si Front End Processing - Physics and Technology II of Dopant-Defect Interactions II: Volume 610 Aditya Agarwal,2001-04-09 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners This book first published in 2001 focuses on the formation of electrical junctions in the front end processing of devices sized for the approaching end of the roadmap **Si Front-end Processing** ,1999 Intrinsic Point Defects, Impurities, and Their Diffusion in Silicon Peter Pichler,2012-12-06 Basically all properties of semiconductor devices are influenced by the distribution of point defects in their active areas This book contains the first comprehensive review of the properties of intrinsic point defects acceptor and donor impurities isovalent atoms chalcogens and halogens in silicon as well as of their complexes Special emphasis is placed on compiling the structures energetic properties identified electrical levels and spectroscopic signatures and the diffusion behavior from experimental and theoretical investigations In addition the book discusses the fundamental concepts of silicon and its defects the electron system diffusion thermodynamics and reaction kinetics which form the scientific basis needed for a thorough understanding of the text Therefore the book is able to provide an introduction to newcomers in this field up to a comprehensive reference for experts in process technology solid state physics and simulation of semiconductor processes **Si Front-End Processing: Volume 669** Erin C. Jones,2001-12-14 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners **High Purity Silicon VI** Electrochemical Society. Meeting,2000 papers that were presented at the Sixth Symposium on High Purity Silicon held in Phoenix Arizona at the 198th Meeting of the Electrochemical Society October 22 27 2000 Preface *Advanced Short-time Thermal Processing for Si-based CMOS Devices* Fred Roozeboom,2003 Silicon Technologies Annie Baudrant,2013-05-10 This book has been written to provide newly arrived engineers in a silicon foundry environment with a comprehensive background in the fundamental physical and chemical basis for major front end silicon treatments such as oxidation epitaxy ion implantation and impurities diffusion as well as giving a survey of the major types of equipment used in integrated circuit IC chip foundries Techniques include various forms of chemical vapor deposition CVD epitaxy thin film technologies lithography masking and other nanotechnologies As well as the target audience the book will also be of great interest to engineers and advanced students in all these and related fields of electrical engineering materials science and manufacturing **High Purity Silicon VI** Cor L. Claeys,2000 papers that were presented at the Sixth Symposium on High Purity Silicon held in Phoenix Arizona at the 198th Meeting of the Electrochemical Society October 22 27 2000 Preface Simulation of Semiconductor Processes and Devices 2007 Tibor Grasser,2007-09-18 This volume contains the proceedings of the 12th International Conference on Simulation of Semiconductor Processes and Devices SISPAD 2007 held September 2007 in Vienna Austria It provides a global forum for the presentation and discussion of recent advances and developments in the theoretical description physical modeling and

Downey, 2002 Unlike the previous three volumes in the series on silicon front end processing this volume expands its focus to include more topics related to formation of ultrashallow junctions With the challenges presented by the requirements of the sub 100nm node the need for new activation technologies which yield minimal diffusion of the dopant while producing high activation are paramount In addition the metrology required to measure these shallow profiles in both one and two dimensions becomes more critical The volume attempts to address these new requirements and potential solutions by covering a variety of topics that include alternate annealing technologies device engineering options dopant activation epitaxial techniques primarily employing SiGe defect and diffusion models characterization using surface analysis techniques and characterization technologies Directory of Published Proceedings, 2002 *Defect and Impurity Engineered Semiconductors and Devices III: Volume 719* S. Ashok, 2002-08-09 This book focuses on the deliberate introduction and manipulation of defects and impurities in order to engineer desired properties in semiconductor materials and devices In view of current exciting developments in wide bandgap semiconductors like GaN for blue light emission as well as high speed and high temperature electronics dopant and defect issues relevant to these materials are addressed Also featured are semiconductor nanocavities and nano structures with emphasis on the formation and impact of vacancy type defects Defect reaction problems pertaining to impurity gettering precipitation and hydrogen passivation are specific examples of defect engineering that improve the electronic quality of the material A number of papers also deal with characterization techniques needed to study and to identify defects in materials and device structures Finally papers also address issues such as interface control and passivation application of ion implantation plasma treatment and rapid thermal processing for creating activating suppressing trap levels and device applications **Index of Conference Proceedings** British Library.
