Structures III covers the papers presented at a European Research Conference on Plasticity of Materials Fundamental  
Aspects of Dislocation Interactions Low Energy Dislocation Structures III held on August 30 September 4 1992 in Ascona  
Switzerland The book focuses on the processes technologies reactions transformations and approaches involved in  
dislocation interactions The selection first offers information on work softening and Hall Petch hardening in extruded  
mechanically alloyed alloys and dynamic origin of dislocation structures in deformed solids Discussions focus on stress strain  
behavior in relation to composition structure and annealing comparison of stress strain curves with work softening theory  
sweeping and trapping mechanism and model of dipolar wall structure formation The text then ponders on plastic  
instabilities and their relation to fracture and dislocation and kink dynamics in f c c metals studied by mechanical  
spectroscopy The book takes a look at misfit dislocation generation mechanisms in heterostructures and evolution of  
dislocation structure on the interfaces associated with diffusionless phase transitions Discussions focus on dislocation  
representation of a wall of elastic domains equation of equilibrium of an elastic domain transformation of dislocations and  
theoretical and experimental background The selection is a valuable reference for readers interested in dislocation
