Minke Whales:

Biology and Exploitation of the Minke Whale Joseph W. Horwood, 1989-12-21 This comprehensive review includes much recent research material and is the only book exclusively devoted to the minke whale species. The scope of this book focuses on three main topics. The first emphasis is on the population biology of the minke whale. Then it documents the historical and current exploitation by man. Finally it evaluates the current size status and management of the many worldwide stocks of minke whales. It also includes a description of the birth and death processes that determine how and why the minke whale population varies from time to time. This is an excellent source for specialists in the fields of cetacean biology, population biology, and management of natural resources. Presented in an interesting manner, this work is also appreciated by students and technically interested lay readers. *Minke Whales* A. Rus Hoelzel, Jonathan Stern, 2000 Whilst the minke whale is the world's most abundant whale, it is also the most persecuted of the baleen whales. Hoelzel and Stern provide an illustrated study of what is currently known about this relatively solitary whale and its behaviour. *Minke Whales* Kristin Petrie, 2005-08-15 Whales are among the largest animals on earth. How amazing that a big whale can jump out of the water and fly over the rope at the water park. Readers learn about the many types of whales and how to identify them.

Folkens, 1987 **Philosophy of the Environment** Sophie Grace Chappell, 2020-03-31 No detailed description available for The Philosophy of the Environment *Quantitative Methods for Conservation Biology* Scott Ferson, Mark Burgman, 2006-05-09 Quantitative methods are needed in conservation biology more than ever as an increasing number of threatened species find their way onto international and national red lists Objective evaluation of population decline and extinction probability are required for sound decision making Yet as our colleague Selina Heppell points out population viability analysis and other forms of formal risk assessment are underused in policy formation because of data uncertainty and a lack of standardized methodologies and unambiguous criteria i.e. rules of thumb Models used in conservation biology range from those that are purely heuristic to some that are highly predictive Model selection should be dependent on the questions being asked and the data that are available We need to develop a toolbox of quantitative methods that can help scientists and managers with a wide range of systems and that are subject to varying levels of data uncertainty and environmental variability The methods outlined in the following chapters represent many of the tools needed to fill that toolbox When used in conjunction with adaptive management they should provide information for improved monitoring risk assessment and evaluation of management alternatives The first two chapters describe the application of methods for detecting trends and extinctions from sighting data Presence absence data are used in general linear and additive models in Chapters 3 and 4 to predict the extinction proneness of birds and to build habitat models for plants *The Mammals of the Southern African Sub-region* J.
