Mupad Pro Computing Essentials:

MuPAD Tutorial Jürgen Gerhard, Walter Oevel, 2000-07-06 This book explains the basic use of the software package called MuPAD and gives an insight into the power of the system. MuPAD is a so called computer algebra system which is developed mainly at the University of Paderborn in Germany. This introduction addresses mathematicians, engineers, computer scientists, natural scientists and more generally all those in need of mathematical computations for their education or their profession. Generally speaking this book addresses anybody who wants to use the power of a modern computer algebra package. There are two ways to use a computer algebra system. On the one hand you may use the mathematical knowledge it incorporates by calling system functions interactively. For example you can compute symbolic integrals or generate and invert matrices by calling appropriate functions. They comprise the system's mathematical intelligence and may implement sophisticated algorithms. Chapters 2 through 15 discuss this way of using MuPAD. On the other hand with the help of MuPAD's programming language you can easily add functionality to the system by implementing your own algorithms as MuPAD procedures. This is useful for special purpose applications if no appropriate system functions exist. Chapters 16 through 18 are an introduction to programming in MuPAD. You can now read this book in the standard way linearly from the first to the last page. However there are reasons to proceed otherwise. MuPAD User's Manual, 2013-08-13

MuPAD An Overview MuPAD is a computer algebra system which up to now has been developed mainly at the University of Paderborn. Our aim was to design a program that can handle mathematical problems and computations of a new order of magnitude. Therefore MuPAD was designed as a parallel system. However MuPAD also runs on sequential computers from small size machines to more powerful workstations. Right from the start we were fascinated by the implications computer

algebra systems can have on the way how mathematical formulae and techniques will be used in future applications of mathematics in science and engineering We believe that the impact of modern technology is most beneficial for the scientific development if systems are created which facilitate the inclusion of the knowledge of the mathematical community Therefore MuPAD was designed as a service to the community in the hope that the mathematical community reciprocates some of its knowledge and expertise to the system As a consequence MuPAD is available to non profit educational and scientific institutions free of charge
