Brilliant Bodies Timothy McCall, 2022-02-21 Italian court culture of the fifteenth century was a golden age gleaming with dazzling princes splendid surfaces and luminous images that separated the lords from the literally lackluster masses In *Brilliant Bodies* Timothy McCall describes and interprets the Renaissance glitterati gorgeously dressed and adorned men to reveal how charismatic bodies in the palazzo and the piazza seduced audiences and materialized power Fifteenth century Italian courts put men on display Here men were peacocks attracting attention with scintillating brocades shining armor sparkling jewels and glistening swords spurs and sequins McCall's investigation of these spectacular masculinities challenges widely held assumptions about appropriate male display and adornment Interpreting surviving objects visual representations in a wide range of media and a diverse array of primary textual sources McCall argues that Renaissance masculine dress was a political phenomenon that fashioned power and

patriarchal authority Brilliant Bodies describes and recontextualizes the technical construction and cultural meanings of attire casts a critical eye toward the complex and entangled relations between bodies and clothing and explores the negotiations among makers wearers and materials This groundbreaking study of masculinity makes an important intervention in the history of male ornamentation and fashion by examining a period when the public display of splendid men not only supported but also constituted authority It will appeal to specialists in art history and fashion history as well as scholars working at the intersections of gender and politics in quattrocento Italy Type Species of the Genera of Ichneumon Flies Henry Lorenz Viereck,1914 **Bulletin of the United States National Museum** United States National Museum,1914 **Bulletin ...** United States National Museum,1914 *Bulletin* ,1914 **Journal of Small Business and Entrepreneurship** ,1988 **Model-Based Reasoning in Science, Technology, and Medicine** Lorenzo Magnani,Ping Li,2007-06-30 The volume is based on papers presented at the international conference on Model Based Reasoning in Science and Medicine held in China in 2006 The presentations explore how scientific thinking uses models and explanatory reasoning to produce creative changes in theories and concepts The contributions to the book are written by researchers active in the area of creative reasoning in science and technology They include the subject area s most recent results and achievements *Metaheuristic Clustering* Swagatam Das,Ajith Abraham,Amit Konar,2009-03-24 Cluster analysis means the organization of an unlabeled collection of objects or patterns into separate groups based on their similarity The task of computerized data clustering has been approached from diverse domains of knowledge like graph theory multivariate analysis neural networks fuzzy set theory and so on Clustering is often described as an unsupervised learning method but most of the traditional algorithms require a prior specification of the number of clusters in the data for guiding the partitioning process thus making it not completely unsupervised Modern data mining tools that predict future trends and behaviors for allowing businesses to make proactive and knowledge driven decisions demand fast and fully automatic clustering of very large datasets with minimal or no user intervention In this volume we formulate clustering as an optimization problem where the best partitioning of a given dataset is achieved by minimizing maximizing one single objective clustering or more multi objective clustering objective functions Using several real world applications we illustrate the performance of several metaheuristics particularly the Differential Evolution algorithm when applied to both single and multi objective clustering problems where the number of clusters is not known beforehand and must be determined on the run This volume comprises of 7 chapters including an introductory chapter giving the fundamental definitions and the last Chapter provides some important research challenges Academics scientists as well as engineers engaged in research development and application of optimization techniques and data mining will find the comprehensive coverage of this book invaluable **Multi-Objective Machine Learning** Yaochu Jin,2007-06-10 Recently increasing interest has been shown in applying the concept of Pareto optimality to machine learning particularly inspired by the successful developments in

evolutionary multi objective optimization It has been shown that the multi objective approach to machine learning is particularly successful to improve the performance of the traditional single objective machine learning methods to generate highly diverse multiple Pareto optimal models for constructing ensembles models and and to achieve a desired trade off between accuracy and interpretability of neural networks or fuzzy systems This monograph presents a selected collection of research work on multi objective approach to machine learning including multi objective feature selection multi objective model selection in training multi layer perceptrons radial basis function networks support vector machines decision trees and intelligent systems

Water Capitalism Walter E. Block, Peter L. Nelson, 2015-10-30 Water covers some 75% of the earth's surface while land covers 25% approximately Yet the former accounts for less than 1% of world GDP the latter 99% plus Part of the reason for this imbalance is that there are more people located on land than water But a more important explanation is that while land is privately owned water is unowned with the exception of a few small lakes and ponds or governmentally owned rivers large lakes This gives rise to the tragedy of the commons when something is unowned people have less of an incentive to care for it preserve it and protect it than when they own it As a result we have oil spills depletion of fish stocks threatened extinction of some species e.g. whales shark attacks polluted and dried up rivers misallocated water unsafe boating piracy and other indices of economic disarray which if they had occurred on the land would have been more easily identified as the result of the tragedy of the commons and or government ownership and mismanagement The purpose of this book is to make the case for privatization of all bodies of water without exception In the tragic example of the Soviet Union the 97% of the land owned by the state accounted for 75% of the crops On the 3% of the land privately owned 25% of the crops were grown The obvious mandate requires that we privatize the land and prosper The present volume applies this lesson in detail to bodies of water
