

PAIN AND OPIOID (NARCOTIC) ANALGESICS¹

● DRUGS USED FOR TREATMENT OF PAIN

Pain is the most common symptom for which patients see a doctor. Optimal management of pain requires that clinician should have a conceptual framework for what is happening to the patient in mind and body. Different types of drugs are used for treatment of pain. In general, they include:

1. Drugs relieving pain due to multiple causes (analgesics):

- **narcotic analgesics** (morphine, fentanyl etc): act chiefly in the CNS
- **non-narcotic analgesics** (paracetamol, metamizole): act chiefly peripherally

2. **Drugs relieving pain due to a single cause or specific pain syndrome only.** They are not classified as analgesics: e.g. naratriptan (migraine), carbamazepine (neuralgias), glyceryl trinitrate (angina pectoris), adrenal steroids (inflammatory pain), butylscopolamine (spasm of visceral smooth muscles), baclofen (spasm of striated muscles), etc.

3. **Adjuvant drugs** (anxiolytics, neuroleptics, antidepressants) may modify the perception of pain and remove the concomitants of pain such as anxiety, fear, and depression. Placebo gives relief in 3%.

4. **Anaesthetics** are used during surgical operations, some diagnostic and other painful procedures.

● FOUR MAJOR ASPECTS OF PAIN

1. **Nociception** is a consequence of tissue injury (trauma, inflammation) causing the release of chemical mediators (ACh, PGE, NA, 5-HT, glutamate, bradykinin, endogenous opioids, adenosine) which have neuronal or non-neuronal origin. These mediators activate nociceptors. *Nociceptors (pain receptors)* transmit information by thin myelin (A-delta) and non myelin (C) fibers to the spinal cord and brain.
2. **Pain perception** has a complex mechanism. It is a result of nociceptive impulses reaching the brain (thalamus, cortex), plus impulses from other peripheral receptors, e.g. heat and mechanoreceptors, whose threshold of response is reduced by the same chemical mediators. These are processed in the brain whence modulated inhibitory impulses pass down to regulate the continuing afferent input. But pain can occur without nociception (some neuralgias). *Pain is a psychological state*; though most types of pain have a physical cause.
3. **Suffering** is a consequence of pain and lack of understanding by patients what the meaning of pain is. Suffering comprises of *anxiety, fear* (particularly in acute pain) and *depression* (in chronic pain), which will be affected by patient's personality and his beliefs about the significance of pain. Depression makes a major contribution to suffering. *Pain threshold* is lowered by anxiety, anger, sadness, fatigue or insomnia.
4. **Pain behavior** comprises of nociception, pain perception and suffering. It includes facial expression of patients, restlessness, seeking isolation or company, medicine-taking, etc. The clinician's task is to determine the significance of these items for each patient and according to them to give suitable treatment. Analgesics may be needed, but not as a mainstay of therapy; adjuvant drugs may be needed, as well as non drug therapy (surgery, radiation).

Pharmacology and Physiology in Anesthetic Practice Robert K. Stoelting, Simon C. Hillier, 2012-01-11 Dr Stoelting's best selling and highly acclaimed text *Pharmacology and Physiology in Anesthetic Practice* is now in its thoroughly updated Fourth Edition. In 60 concise clearly written chapters, this book provides comprehensive current clinically oriented authoritative information on all aspects of pharmacology and physiology that are relevant to perioperative patient management. This edition includes all new drugs and new findings on actions and interactions of established drugs. More than 400 diagrams and more than 100 tables complement the text. This edition's new two color page design will help readers spot key information. A separate drug index is included for quick reference.

Halevy, 1986-06-12 *Clinical Anesthesia* Paul G Barash, Bruce F Cullen, Robert K Stoelting, Michael Cahalan, M Christine Stock, 2011-01-01 The premier single volume reference in the field of anesthesia. *Clinical Anesthesia* is now in its Sixth Edition with thoroughly updated coverage, a new full color design and a revamped art program featuring 880 full color illustrations. More than 80 leading experts cover every aspect of contemporary perioperative medicine in one comprehensive clinically focused, clear, concise and accessible volume. Two new editors, Michael Cahalan MD and M Christine Stock MD, join Drs Barash, Cullen and Stoelting for this edition. A companion Website will offer the fully searchable text plus access to enhanced podcasts that can be viewed on your desktop or downloaded to most Apple and BlackBerry devices. This is the tablet version which does not include access to the supplemental content mentioned in the text.

Decision-Making in Orthopedic and Regional Anesthesiology Michael R. Anderson, Sylvia H. Wilson, Meg A. Rosenblatt, 2015-09-17 In light of evolving techniques and strategies for increasingly complex orthopedic procedures, this accessible guide to patient management outlines the considerations involved in selecting the most suitable anesthetic for both common and complex clinical scenarios. Chapters cover a multitude of clinical presentations and procedures ranging from orthopedic trauma to total joint replacement, outpatient hand procedures and regional anesthetic placement in patients with pre-existing conditions. Each chapter discusses and evaluates multiple approaches accompanied by a review of the current literature. Abundant case scenarios of patients undergoing orthopedic surgical or regional anesthesia provide a handy framework for specialists and consultants as well as an invaluable guide for trainees in anesthesia, regional anesthesia and emergency medicine.

Opioids in Medicine Enno Freye, 2008-03-12 This book fills the void to provide a comprehensive review of the theoretical knowledge and scope of opioid pharmacotherapy in pain medicine. While the information provided is obtainable in other major texts already in print, the present format, style plus the illustrations will make easy reading and fast accessibility of information on opioids available. Information provided is based on clinical practice rather than pure experimental for use in daily practice.
